Hi Automan...

I posted something via Javiations "Contact Us" link a while ago and got no response. After waiting some time I posted a message here (or maybe it was on alt.radio.scanner) asking that same question. In a day Jonathan had sent me private e-mail offering to help (with my MVT-7100 problem). He said the message on his web site had been overlooked. So I was convinced he was still a pretty good guy! Now all I need to do is get back to him on how to get my Yupi fixed! I suspect he's already replied to you, but if not, try him again!

I have a weird problem with red. My wife's Pontiac Grand Prix instrument panel is illuminated in red, and it always looks a little blurry to me. I think green is probably the best overall. Remember the "green screen" monochrome IBM monitors? I actually kind of miss them. Text was sharp!

On every flight I've been on recently, including flights between
Australia and the USA, the use of "radio transmitters or receivers" has
been specifically mentioned as one of the the things which can't be done
during flight (not just takeoff/landing).

That said, I'm not sure if anyone would actually care...

Scott.

Yeah, I liked the old green monitors that I used to use with my RTTY decoders. My friend had two amber ones on his and I hated them, even though they were just as clear as the green was, I just don't like that color as a display..

My wife and me have obtained an old Toshiba laptop, with plasma
display - superb! This display beats all the early LCDs! We use this
machine for CW practise.

2808. Cell Phone Jammers

Newsgroup: rec.radio.scanner
Date: 2005-06-30 17:18:16 UTC
From: willow <liegebay@yahoo.com>
Message-ID: <da19ui0133d@enews1.newsguy.com>
Source record: 12970

FCC Enforcement: Cell phone Jammers

The Enforcement Bureau of the Federal Communications Commission has issued a "Citation" to Grand Trades Co., (www.grandtrades.net), for selling unauthorized radio frequency devices-specifically wireless devices and cell phone jammers, and long range cordless telephones. The jamming devices are a double no-no. First, they are unauthorized intentional radiators, and hence violate the FCC's marketing rules, and second, they could never be authorized as it is forbidden under the Communications Act for any person to "willfully or maliciously interfere with or cause interference to any radio communications." In addition to jamming devices, Grand Trades' site sold a "long-range" cordless telephone (the Senao Model 358), which appears to operate in the amateur 2 and 1 ½ meter bands with a base station power in excess of 4 watts. These are clearly not cordless phones conforming to the authorized bands and emission limits of Part 15.

The citation is a warning. No fine has been levied, but the FCC may impose a fine of up to $11,000 for each violation or continuing violation that occurs after the date the citation is issued. The citation was issued after a letter of inquiry in March garnered the response that the company was based outside of the U. S., did not hold inventory in the U. S., nor did it direct business to the US. The company's web site, however, appeared to recommend some of its models to the North American market. It seems highly likely the FCC is going to pay close attention to this matter because of the high potential for interference to authorized communications that the offered equipment appears to hold.

In addition to taking liberties with radio regulations, Grand Trades Co. also appears to give short shift to tax laws, making the offer of a reduced value invoice to enable its European customers evade VAT (value added taxes).

I have one of those 800MHz antennas on my Pro95 as well.. I get the same signal w/ the antenna, or w/o it... or w/o any antenna whatsoever!!

I found the pro95 works better when you leave the first channel (channel 0) blank on a bank that is trunked... for some reason it works a whole lot better.. for me anyway... This is with an EDACS system, not a Motorola... I haven't tried it w/ moto yet.

I tried that back when I was "experimenting". With no antenna it will not pick up the 100 and 400 MHz's at all. It will pick up the 800MHz's, but barely. This is with a Mot. type II, don't know if that makes any difference. I rarely listen to the 100MHz (County here), but when I do I found the 800 antenna seems to do just as well as the one that came with the scanner, even though they (sales people) warned me when I bought the 800 antenna that it would not work with the lower frequencies.
I have noticed that the city police seem to have no better radio reception with the new system they spent all that money on though. When they were touting it and justifying the cost that was supposed to be the big deal, it never turned out that way. They did get the use of a few encrypted channels though so they can talk to each other without anyone hearing, which I suspect was the real reason for the change. I think they just did not feel they would get the Ok to spend the cash if they told the people that's why they wanted the new system. I am surprised they have not just changed the main dispatch to the encrypted channels to save them selves the embarrassment of people hearing a lot of the stuff they do that is great for a few laughs.

USS TR Exercise Activity 05-06-30
==========

It is Thurs 9:04pm EDT.
USS TR comms continuing; getting heavier the past 10 minutes.
BEAR 601 (OM) and BEAR 604 (YL) especially talkative.
BEAR 601 just announced to Red Crown on 364.075: "Mother is [radial]
240 for 16 [DME]."
BEAR 601 is also up on 258.7 discussing tankers with "TP."
BEAR 604 on 284.85 (Bear Tac) says that tanker EARL 98 is supposed
to come up for mission tanking.
Tanker TAHOE 81 just came up on 307.25 (Jax Ctr @ St Augustine).
Other freqs with USS TR-related tfc in last few minutes:
258.700
267.500
273.350
284.850
286.100
325.450
351.800

Hi All,

This is my first post here, but thought you all might be interested in getting the unused thumbwheel switch to do something useful on the mighty AOR 8200. I couldn't find any info on this, so went ahead and had a go and wrote up the results...

Well, I've managed to get it wired to act as the ENT/M.in key on the keypad, details of how todo it can be found here - http://www.neonbox.org/aor/index.html

Hope you find it useful...

Cheers,

C

CALL STEVE
(Debbie Harry/Blondie/Purple Haze)

Cold nuts this winter, baby,
Call Steve to keep them warm
Need a blowjob this winter, darling,
Steve'll go down wherever you are
Steve'll use all his charm,
He likes to drink his cum lukewarm

Call Steve, Call Steve
For that wet blowjob
Call Steve any, anytime
Call Steve, Call Steve
For a wet blow job
You can call Steve any day or night
Call Steve

Steve covers dicks with kisses, baby,
Steve covers testicles with love,
Hairy, sweaty, or sal-ty, maybe
Steve can never get enough,
Faggots call Steve, he don't know why,
Breathless Steve never runs out of k-Y

Call Steve, Call Steve
For that wet blowjob
Call Steve any, anytime
Call Steve, Call Steve
For a wet blowjob
You can call Steve any day or night
Call Steve
Steve sucks on anything,
When you're ready, Steve can swallow your jing
Call Steve

[Break]

Oooooh oooohh Niggerdicks are Steve's only love,
Oooooh oooohh Niggerdicks, Steve can't get enough,
Oooooh oooohh Steve, moi cherie, au revioir
Anytime, anyplace, anywhere, anyway....
Steve'll suck anytime, anyplace, anyday---ay

[Break]

Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve, call him any, anytime
Call Steve, Call Steve
Call Steve for blowjobs some other time

2817. Finding frequencies on my scanner (Stupid Q?)

Newsgroup: rec.radio.scanner
Date: 2005-07-01 18:10:57 UTC
From: "Nick E. Name" <barelybad@hotmail.com>
Message-ID: <1120241457.107245.299370@g49g2000cwa.googlegroups.com>
Source record: 12979

July 1, 2005

Hello, all,

If this is a stupid question please let me know or ignore me.

If it's not, I'd sure like to learn the answer, or at least some pointers to where I can get it. I'm quite new to the community of scanner users, but this newsgroup seemed like a good place to ask.

I have a Radio Shack PRO-90 300-Channel TrunkTracker Scanner that I bought I don't know how many years ago, and I live in the Kansas City area, near 75th and Pflumm in Shawnee, Kansas, if that helps.

Where can I find a list of interesting frequencies to scan?

It seems like someone or several someones would have already come up with good lists of frequencies for various geographical areas. Am I right about this? If so, are they secret?

Thanks.

First, as my Dad use to say, there is no such thing as a stupid question. You don't know and there are probably others that don't. You just took the big step and asked. Bravo!

As to the frequencies, I live on the west coast near San Francisco, so I don't have the answers. You might go to various Radio Shacks nearby and ask for frequencies. When I use to work at a RS store, we had ready made lists to hand out of the local freqs. We may have been the exemption there. But most stores will have some knowledge (hopefully) of the local PD, FD, etc.

If there are scanner clubs in the area, there can be a wealth of info. If you know any Hams, ask them.

Out here in California, we have a guy who publishes whole books on frequencies for the state, broken down by areas. See if there is a Ham store or Scanner store near you. They may have the same idea.

Sorry I can't be of more help than that. Let us know what you find, and maybe post some freqs, or tell us where you finally found the info. After all, there's probably someone lurking, just wondering how to find the same info.

Oh, as some people will probably say (and it can be oh, so, true) Google is your friend <G>. Give it a whirl. What have you got to lose?

Eric KA6USJ

One more time....Went to Google. Typed in shawnee + kansas + frequencies and got over 5000 hits. One of the first ten even listed a TrunkTrack Fleet Call. How's that for research? BTW there is a space between the + signs and the names and words. Other than that, just the three words.

All kinds of frequencies. Even noticed one in the first hit for a Country Club near your....That might make for some good and/or boring listening...Good Hunting and have fun. Welcome to the scannerist world!
Eric

That's because on EDACS you need to program the channels in LCN order,
and the first LCN is always 1. Channel 0 is never used.

You are right, Jonathan replied today. He said they were closed last
week and he is still trying to catch up.

If I order, he said I may be charged Import Duty, what ever that is,
and receivers of that type have to be payed by Bank transfer, I've
never done payment of that type. I guess ordering from another
country with be a bit of a learning experience.

Anyone who has ordered from over seas have any advice, if I order?

monochrome IBM monitors? I actually kind of miss them. Text was
sharp!

Bill Crocker

A frined's uncle was a enginner at HP and worked on their
first LED calculator. They ran into an odd problem. The durves
that showed the visual response of the human eye where not
all that good. Many men had major problems first LEDs displays
they made if there was any room light. A rapid reformulation of
the LEDs saved teh day. Many men can not see nearly as deep
into the red as the charts still show. And a few can see well into
IR. I have no idea how a females eyes respond, but I suspect the
same data appplies. They were con cerend with males, because
that is who bought the early calculators.

I do know that most women as a gerenal rule can discern subtle
color variations that most men can't.

This relates to LASER pointers. Human vision has a fairly fast
drop in response at the red end, and only a few nM in wavelength
can make a LASER lose a lot of apparent brightness. The deeper
reds LASES are much cheaper then the higher red LASERS.

Terry

For those of you that haven't already done so, be sure to check out the Radio Reference web site! It is a very active, and current resource for everything having to do with our scanner radio hobby. They have a national frequency database like no other! You have to create a user I.D., and Password to access it, but its no trouble. They do accept donations, (definitely worth it), but it's not required. No riff-raff either!

It is Sat., 12:52pm EDT (1652z).
There are a lot of weather issues today, but the USS Roosevelt acft
are active today.
Among the freqs I am hearing at the moment are:
252.200
258.700
267.500
268.300
273.350
274.375
286.100
357.000
380.800
Among the players:
BEAR
BOLT 61 "We are the tanker for this afternoon."
FELIX 31
LION 42, 47
PARTY 22, 33, 403
BEAR has informed players "Our system is midnight right now; we are
unable to give you positions."
Also, on 380.8 (Pinecastle): "Iron Cross is not on station today."
Due to wx limitations elsewhere, they have opened Area 31J from
surface to 10,000 ft.

Dear Mr. Ferguson,

Thanks for all the help. I thought I was Googling correctly, but apparently I wasn't.

I am so unfamiliar with scanners that I don't know what "trunked" or "ID" or "Type II" mean, and I don't know what my scanner is capable of (apparently not much in my hands so far). I can never seem to get any of the frequencies or frequencies ranges I try to find anyone talking. Is there a Web site or other online source of information you would recommend?

Scanner as it it receives broadcasts other than SW, AM and FM
commercial bands? Like a police scanner?

If you are asking whether you can use it on a plane, it probably won't
work anyway. If you are asking if it is legal to use in Australia, you
should contact the Australian Embassy or the Australian equilivant of
the FCC directly. You will probably need some sort of Australian
liscense, and you may find that the freqs. used for various purposes
are different there.

I've seen several of these devices attached to the street light poles
in Irvine, CA. Clearly there is some kind of radio inside the box, but
what is their purpose?

Are they attached to random street light poles, or are they at/near
intersections? And what streets are these on - which street was that one on?

According to the City of Irvine's website, the city's Traffic Research
and Control Center has various mobile, wireless cameras set up around
Irvine to monitor flow on major arterials and some other side streets.
Might that device in the image be related to that?

Could also be a microcell for cellphones. Ours are usually mounted about
halfway up the pole.
I can't make out the blak dome above. It may be a photocell to turn lighting
on at dusk, or perhaps a GPS antenna. If GPS, then the unit may be a DGPS
transmitter.

Could it be a terrestrial repeater for either Sirius or XM?

The more I look at it, the more I think not. But it appears the power
tap is the grey module inserted between the lamp and the LDR switch,
even though the LDRs are typically grey, they can be black.

The antenna appears to be a 5/8 over 5/8 over 1/4 somewhere around
900MHz. Could it be a police or public service voting receiver?

Get a good zoom lens and take a shot of the label on the bottom of the
unit. It's possible that info would reveal a few hints.

Now that you've piqued everyone's curiosity...

I am guessing that they are close to the 16000 block of Von
Karman Avenue - the IPMobileNet HQ. Am I right?

IPMobileNet makes the XpressNet 802.11 Mesh System, which is
often set up using SmartCell access points on light poles.

That box looks like a standard NEMA enclosure that anyone can
use. The antenna looks like a WiFi (zoom in, it's longer than
it looks at first).

Perfectly legal to use in Australia, without the need for a licence.
And despite what the police will try and tell you, it is not illegal
to listen in to police radio either (they will try to tell you it is
illegal, but when they catch you doing so they will have nothing to
charge you with).

Dave

Chris,

Have a look at the following sites:-
www.scanaustralia.com.au
www.scannsw.aesvn.org/
They should give you pretty much what you are after. Bear in mind that NSW Police us VHF mid band (78MHz) in many country areas. This may pose a problem if you do not have a wideband scanner.

Regards
Troy

Christopher O'Callaghan would be well advised to pack the scanner, less batteries, in one bag and check it, and the batteries in another and check that too. I still would not guarantee airport security would not sit up and take notice as they go past the other kind of scanner, though.

In case you would like to take your "radio" into the cabin you will be
asked to 'turn the radio on' just to verify it is a radio and not some
kind of bomb.
So it might be a good idea to have some freqs of the lokal radio
stations programmed into your "radio".

Hmm... Any idea which SSID(s) they use? I can use NetStumbler to see
if that SSID shows up. Also, there is a cable leading from the NEMA
enclosure to a cylindrical device on top of the pole; any idea what
that is? Is it some sort of sensor that is being remotely monitored
via the radio in the NEMA enclosure?

That cylindrical device on the top is nothing more than a simple photo
cell to turn the street light on at dusk and off at dawn.
It looks as though they are merely getting power through the exposed cord.
Still don't know what the unit is though.
We have them here in Denver too.

In My area we have cell phone extenders that look about like this.
XM terrestrial repeaters are usually on large buildings or hills and
they use a several KW Klystron amplifier, which takes a 6ft rack for the
redundant pair. Don't think that is stuffed inside the lamp pole....

I'll accept something like that. What frequency range does the
terrestrial signal occupy?

I would have figured something smaller and several of them in a city,
not just one multi-kilowatt transmitter.

A ridiculous security standard, since there is no reason it can't be
both a bomb and a radio.

I've seen these on some poles in upstate NY also.
Think they are used to signal the electric utility when
the streetlight goes out. You will note the round
power adapter that is sandwiched in-between the
125 VAC photocell which switches on the lamp.
These are a 3-conductor / pole twistlock connector.

one thought about these : this device is located on a utility company
light pole. it's highly unlikely that it belongs to anyone
commercial other than the utility company / or the " city of "
people. could easily be part of the new equipment that
cities are installing that allow cops and city workers to have hand
held and " in car " wi-fi " (mdt style) data terminals.
we have those recently installed in my city and they resemble these
devices. they ' do not " show up on netstumbler type
receiving equipment .

Have you tried the :
http://www.radioreference.com/index.php
?
They have a hell of a lot of info. Back when Our city police switched over to 800 trunked, I already had a Pro-95 I had bought a year or so earlier. I had one hell of a time trying to learn how to understand the manual. Asked for help on a couple of groups and got nothing back then. I finally found what I needed after much MUCH searching <G>. After I saw a link to this place, and sure wished I had known about it from the start as it had everything I needed in easy to understand info.

Are we looking at equipment left over from the old Metricom Ricochet
service? Their strateqy was to operate a mesh network in the unlicensed
ISM band. By cutting a deal with the city to use lamposts they could
avoid having to pay the high utility pole attachment fees.

If you're referring to CTCSS, no the Icom R10 does not have that feature. However, you do not need to program CTCSS tones to monitor, you program them so as not to monitor others using the same frequency. So nothing should change, and it should not affect your monitoring of the local police.

I forwarded the photo to an distribution engineer friend of mine at a nearby power utility. He suggested it could be a remote meter reading transponder repeater. The technology has numerous ways of doing it, and low power radio modems are used in some demand metering systems where individual phone lines are not practical. The transponder gets its power via the power tap inserted between the lamp body and the light controlled switch. The nearby low power transponders all report into their local transponder which in turn relays the reports to a central gathering station. That's how the system works. Whether or not that is what it is is yet to be verified.

The antenna's element and coil dimensions look too big to be 2.4GHz. It does however look right for ISM.

==========

July 5, 2005

Dear Ms. Czepiel,

Thanks for writing, but I'm unclear on what you're saying.

As you can see from the prior posts, at least a few people gave a hoot.
For instance, Mr. Crocker, whom you quote, was kind enough to conduct
some research and send it to me based on where I live.

My question to you and other participants is what it is you mean by
"Nice job."

--Johnny

P.S. Thanks again to all of you, including those who responded
off-list, for your help. I am overwhelmed by your generosity in
listing frequencies for my area, and for showing me how to find more.

Does anyone know where to find one of these?
Doesn't look as though Optoelectronics carries them any longer.

Thank you.

July 6, 2005

Dear Ms. Czepiel,

First, you have changed your story. Originally your complaint was about my mentioning where I live, and now it's that I made that statement in a way you disapprove of.

Second, hilariously, you misquoted me. I did NOT say what you claim I said.

And I still want to know what you meant by "Nice job."

Not in Troy, MI. The Fire Dept. uses the modulated light beam aimed at photoelectric sensors for that.

If your thinking of buying an HP computer product....DON'T !

HP has gone to India for all it's telephone Customer
Support and they all speak bad English and you can't
understand a word they are saying.

Buy an HP....
Have a problem...
Call up their Tech Support hotline....
You'll get "Pasheesh-from-Punjab" who talks like
he's got a mouthfull of marbles and can't understand
a word your saying because he'e been trained to
read from a script like a trained spider monkey....

(HINT: You'd be better off calling Habib at the local Dunkin-Dounutz for
tech support..)

---> F*CK Hewlett-Packard!! (another formerly great USA company that's
now frigged it's historic reputation for great customer service by
going to half-ass
overseas tech support in)

Buy someone else's product instead and tell HP (..and Aglient Technologies
too!)
to go do somehing with themselves and their crap products and support.

Signed: a former HP Business/Commercial customer.

If there's a public safety emblem on the car, those are the radio
engineer's cars used by counties or cities for testing purposes.

Otherwise, you've spotted a MAJOR scannist.

Imho,

Andy

It is going to be tough boys, you are going to have to tighten your belts for your country, we have to provide excessive profits for out buddies in the large corporations and the friends of our noble families who need a standard of living approaching that of royalty (did you ever notice my dad was president too, we are the beginning of a blue-blood line of royalty, respect that.)

We just have to outsource these jobs to the people of the world who are left to take advantage of, your fellow americans have become too educated to work as slaves and live in poverty.

If things really get tough for you here, catch a boat to india or china, we will have a job for you there, just tell them george sent you.

Have you ever been to mexico, you might want to try there, it is closer and they have great tacos there for lunch... although smuggling drugs across the border is highly dangerous, it does provide big lucrative returns if you do not get caught.

Don't be afraid to try something new...

G.W.B.

Seven on my car at last count - 1 for the stereo, 1 for the mobile phone and
5 radio type antennas (1 HF auto tune, 1 HF monobander, 2 UHF antennas, and
a combo 2m/70cm). Still need to find room for the 6m antenna......

I've had good experiences lately with a HP PC problem and a HP printer
problem using the on-line chat option. Both problems were taken care of,
and quickly.

On my SUV:
2m APRS
2m
220
440
HF - 80-10 Screwdriver
6m
800 Mhz Trunked
850/1900 Cellphone
2400 Mhz Network
AM/FM Stereo
XM Satellite
GPS
Multi Band Scanner

Only 1 Mag mount, the XM.

That is a Ricochet Radio.
Part of a Mesh network on 900 Mhz for Internet connectivity.

The company has been about about 7 or 8 years and has had a hard time of
it. I first ran into them in there home city of Seattle in 1998.
In some places they pulled the plug on the network leaving the radios
on the poles. I thought they were out of business.

yea, very similar except 4 of those biggest black antennas (2 front
and 2 rear) a couple more of those satellite antennas (the short
, big around ones) and several more misc short whip antennas ......
maybe not visible in this view. that van behind the suv looks like it
might be that mobile S.A.M (surface to air missile) unit that
people have been talking about that the secret service uses.
(I occasionally see the foot agents with trench coats that conceal
m72a2 LAW launcher tubes too)

interestingly enough , standing right nearby one of these mobile
commo suvs , using a Opto R-10 receiver , NONE of the
transmissions (you can see them talking to each other and
surely some of those antennae represent packet style
node networks of some sort) will register on the r-10.
probably spread spectrum, wi-fi or UWB based equipment
in the suv.

wouldn't you love to get a tech tour of THAT puppy ?
ha ha ha ha ha it'd probably be an eye popping
experience, no doubt the " latest and greatest " .

Never buy a HP or Compaq as you will not get any tech support. When I had to restore my system I found one of the disk in the restore set was bad. Never able to receive help needed to fix problem and HP didn't have the correct replacement CD. Ended up scraping system although it was only over a year old. NEVER BUY HP PRODUCTS.

Roger that. I finally gave up on my HP S20 Photosmart scanner after sending it in for out of warranty repair (to take care of any hardware problem) and have it sent back with note that there isn't anything wrong with it. I also paid for and went through their tech support line with no success. I finally tossed it and bought a much nicer Epson Perfection 4870 that does double duty as a document scanner. My other HP flatbed scanner is gathering dust on a shelf. HP? Never again!

Unless you had their specific frequencies programmed into your R-10,
you're not gonna hear a thing.

If you were standing there with a 246 or 396 in close call mode, you
would get hits on their frequencies.

then it is a leftover from the old Ricochet Network that went
tits-up a few years back... Makes a nice 928 Mhz packet system.....

Me who actually ownes a complete Ricochet 800Mhz
Base Station including the router

I'm speaking of the " OPTOELECTRONICS " R10 nearfield
surveillance receiver. (the one with " intercept " on the front
panel)
the model before the R11 which was locked out on the cell bands.
the r11 had a kewler looking front panel and equipment feel .
(the more desirable r10 was NOT locked out on cell freqs)

this communications intercept surveillance receiver had NO frequency
programming keys on it ,
only the ability to " lock out " certain undesired freqs. it existed
a " decade " before the " close call " models you mention above.
it has a range (depending on the antenna and filters on the input)
of 3 to 5 miles and more. (depending on the power of the
transmitter too)

these extremely desirable " pro quality " nearfield surveillance
" signal intercept " receivers are still seen occasionally on ebay
but sell for many 100s of dollars nowadays.

this has nothing to do with the programmable ICOM IC-R10.

the opto R10 or R11 will blow the doors off the current so called
" close call " receivers and it " does not " find ANY of the

equipment in the mentioned comms vehicle. (nor would
any of the , less sophisticated , close call rigs)

dunno about the " digital " signal intercept receiver made
by opto called the " digital explorer " ..... haven't tried it
near one of those comms suvs yet. maybe " it " could capture
some comms since it (unlike MOST other equipment)
can " see " digital signals.

I guess they use some kind of spread spectrum.

>dunno about the " digital " signal intercept receiver made

After some tests with a digital capable counter, it was able to
discover GSM carriers, and it shows the frequencies of WLANs. Also it
shows the frequency of the very short bursts which are used by MPT1327
to register or request a connection.

roger that ralph. I'd guess , since it's guarding the president,
that no expense has been spared and much of their
commo equipment is tied into the " extensively deployed "
UWB equipment that the military now uses. some of government's
UWB systems are into the 3rd generation (phase) by now.

http://www.google.com/search?hl=en&lr=&q=military+deployment+of+UWB&btnG=Search
http://www.computing.co.uk/vnunet/news/2138542/air-force-secure-uwb-wireless

military deployment of UWB equipment is (of course) far in advance
of what us average civilians usually know about , look at how
the military had spread spectrum for 15 years before " we "
got wind of it. guess UWB is supposed to be more difficult
to detect than even SS was .....

it'd be interesting to be able to get some civilian UWB equipment
(which is due out pretty soon)

http://www.asiatele.com/ViewArt.cfm?Magid=4&Artid=15541&Catid=5&subcat=48
http://www.med.govt.nz/rsm/spp/uwb/discussion/discussion-05.html

to use as a signal source and then develop some kind of very wide band mixer (the injection oscillator being an ultra wide sweep gen) and " then " drop the product into a detector of some type (maybe a standard hp microwave in-line detector) then into your digital counter. this to , at least , be able to detect the " presence " of these UWB devices. if all the nanny cams and wi-fi links etc. of the near future are going to switch over to UWB (as the industry is projecting) then a LOT of us are going to want to (at least) find these devices , even if they aren't hackable (ie: SS) . judging from the difficulty that SS presents (of detection) , this isn't gonna be an easy task.

since UWB signals have such different characteristics , the wide band mixer
, mentioned above , would need some kind of variable width injection oscillator and a comparators circuit that samples the product for amplitude and adjusts it's width automatically to the signal detected . this to optimize the mixing bandwidth to the signal present. it would be simple to limit the narrow most aperture of the mixer to about (say) half a meg (or maybe several megs) to preclude the possibility of " ordinary " signals from becoming a problem, and guarantee that you are hearing a UWB signal.

I am debating the choice of which scanner I would like to buy next. I am interested in the newest Uniden (396T) and the Pro-97. I currently own a Pro-96 which I love and I want to add something with a feature like Close Call or Signal Stalker as well as keep my trunking capability. I know there is a $350 difference between these two scanners but that is irrelevant. I mainly want to get the best local detection I can and so far have not found any definitive comparisons of the two implementations. Has anyone reading experienced both that could comment?

Thanks!
-Al A.

PATRICK AFB AREA LOG - Sunday 10 July 2005

Civil Air Patrol Exercise

CAP Flight 831
CAP Flight 837
CAP
Flight 840
Reno 02
Reno 03
Acft arrive and depart Patrick AFB.
[133.75]

US Coast Guard

CG Vessel 47301 dispatched by CG Sta Port Canaveral to boat in
distress.
[157.15]

NASA Aircraft

The astronaut crew of 7 that will depart on the STS-114 Return to
Flight mission to the ISS arrived Saturday, one day early due to
concerns for weather. They arrived together in a NASA Gulfstream
instead of flying to the Shuttle Landing Facility in their T-38s. They
flew the Shuttle Training Acft (STAs) tonight.
NASA 4: Gulfstream II
NASA 950: Gulfstream II
NASA 945: STA
NASA 928: WB-57 High-Altitude Research Acft
NASA 902: T-38N
[133.75, 132.65, 124.8, 125.075, 133.475, 128.55, 126.65, 284.0; 235.4
air-air]

USS Theodore Roosevelt Acft

Aircraft off of the USS Theodore Roosevelt worked the ranges during the
afternoon despite bad weather, and then returned to work the range
until nearly midnight. Bad wx in the ALTRV severely hampered
operations; and several of the acft had to RTB to USS Ship because of
low fuel level incurred by wx deviations. Some attacked targets at Avon
Park and Pinecastle Ranges; also engaged in ACM and AAR.

CALLSIGNS:
Bear 20, Bear 30, Bear 600 (E-2C, Norfolk)
Lion 31, Lion 32 (F-14, Oceana)

Felix 31, Felix 32, Felix 33 (F-14. Oceana)
Party (F/A-18)
Pride 57 (F/A-18 #164655, Oceana)
Rhet 12 (KC-135R, Robins AFB)
Bolt 88 (KC-135R, MacDill AFB)

FREQUENCIES:
262.650 Lion, Felix Air-air
267.500 Sealord
268.300 USS Theodore Roosevelt Strike
269.300 Miami Ctr
273.350 AR Boom
286.100 USS Theodore Roosevelt Strike; Bolt AAR comms
292.200 Avon Park Bombing Range Ctrl
317.975 USS Theodore Roosevelt Marshalling
340.450 Air-Air
341.100 Sealord Discrete; AAR
343.700 Bear, ACM BRAAs, Lion, Pride.
344.600 Patrick AFB Metro
357.000 Sealord Check-in for Pinecastle
357.950 ACM
380.800 Pinecastle Range

VIP Transports

JOSA 445 (C-21A) with Code A-3 aboard
JOSA 124 (C-21A #40091) with two Code A-3s, one Code A-4.
Both acft inbound MacDill; 311.0 Lightning Ops.

I can verify that these were the transceivers for the Ricochet wireless ISP
of a few years ago.

I used to be a subscriber. I could run 19K full time at the cheap grade of
service. I was living where it was difficult to add another dialup line at
the time.

They went out of business.

Not like I thought it would. It's better than FRS in some respects. You can run up to 2-watts on MURS, where FRS is limited to 1/2-watt. You can use various antennas, including outside, roof mounted, where you're not allowed to alter the tiny rubber ducky on FRS. You won't find too many kids, and their moms on MURS. MURS also allows for a lot of different uses, where FRS has some restrictions.

NASA's two WB-57Fs are MARSA over Florida at 55,000 ft
==========

NASA 926, one of their WB-57F High Altitude Research Acft departed
Patrick at 12:05pm EDT and ascended in a spiral to work at 55,000 ft.
The acft was heard in comms with Miami Ctr on 119.825; many other
commercial airliners asked the ATC "What is that acft with the huge
wings?" NASA 926 had air-air comms with another NASA acft on 235.4.
Then, moments ago, at 1:50pm EDT (1750z), the other WB-57F "NASA
928" departed Patrick. He is headed to 53,000 feet now, and according
to NASA 926 comms, the two acft will be MARSA soon.
Both are up with Miami ATC 119.825 now.

At 2:06pm EDT, both are MARSA.

"Kind of".
My wife, and some friends, all use MURs when we are out and about.
It is about like any 2M ham HT running 2W. We have only heard one
other user and that was in Columbus OH.

Conversly, FRS are a lot smaller, lighter and much cheaper!!!
so they are much more convinient in a mall.

The Radio Shack FRS units that had all the guts in a plastic
blob with the antenna that magneticaly mounted on the roof out
performs the MURs on the highwya. If one of our friends didn't
own a 2 way shop and sell us the MURs "at cost" beause they
didn't move, it wouldn't have really made sense. I do know of some
guys in westeren KUY using Radius HT reprogramed to MURs
freqs. Not real legal, but I doubt if they will get caught. Makes much
more sense then some fools I know using marine VHF gear.

Who ever said the cell freqs had nothing to offer doesn't have a capable scanner, or no conception of great drama when they hear it.

They're alive with activity that rivals any 5 star script ... everything from mall security dragnets, TV personalities swearing off the air, mil-ops transmissions taking place locally, drive-thrus, to catching cops speaking candidly on cell phones.

It's obvious to me why the gestapo outlawed our means to eavesdrop, but the interesting part of the private conversations it doesn't want us to hear, is that they reveal a lot more than the censor thinks.

Meaning -- despite the attempts to suppress truth and shut us all up, people KNOW what's going on.

Look, we all enjoy the same enthusiasms, but if you don't have a no-gap rig, you'll never know why only law enforcement can buy them that way.

For me, this ain't no hobby --it's a picture window.

this must be a reprint from back in the early 90s ....

dunno where " YOU " live , but in my west coast metro
area of 1.2 million population, you could count " all "
the daily " analog " cellphone traffic on your fingers and toes.

99.9 % of all previous analog cell calls have been switched to
digital, out here, and there is pretty much " nothing " of ANY
substance to be found on the analog cellband anymore.
just a rare few thinly scattered traffic on the " B " band
channels. the " a " channels are ALL digital traffic now.

if you actually do have active analog cell activity in your area ,
treasure it while it lasts, it's not long for this world. not many
people have much analog traffic left. the ole " picture window "
has shrunk to less than a " peep hole " these days .

Well said!

(I have found scanning while traveling through the middle of nowhere
usually yields mostly analog stuff. The deep rural crowd are clinging to
their bag phones with both hands as they know the itsy-bitsy junk just
does not cut it out there.)

Yeah, I know you guys are right -- I'm not naive and I do read like a voice from the past, but you'd never know it listening to the cell ranges in this region. That's the reality I was talking about.

I agree, it won't be long before we're all put out of business. That's how I knew the MK3 I purchased last year would be the last scanner I'd ever buy and I didn't even need a peep-hole to see it.

Looked at radioreference.com but it only came up with police and fire frequencies for Ukiah and for Mendocino County. If you can get your hands on a scanner with signal seeking capabilities (I have the Pro97), you might wanna' try using that to see what you can pick up around the reservation.

It hasn't so far (at least around my area).

I would still hope that MURS catches on, since you can use higher power on those freqs than you can on FRS, and you can also use different antennas than the "stock" ones.

I would imagine that a big part of the paucity of MURS use is due to a relative lack of available radios and dealers who sell them. I recall doing a search for MURS radios about 6 months ago, and I think I fould like two online dealers who actually carry these radios. I see no advertising for them, either. They are also much more expensive than FRS "bubble pack" radios. Seems like only radio/scanner/amateur radio aficionados have a clue as to what MURS is.

There are a lot of radios on eBay that can be used legally for MURS. Some
of the Motorola are higher wattage, but if you keep the switch on 2-watts,
or less, they're legal.

Source record: 12814

MURS has an odd deviation limit on three channels.
<http://www.provide.net/~prsg/mursrule.htm#95.631>

"5.632 MURS transmitter frequencies.

(a) The MURS transmitter channel frequencies are
151.820 MHz,
151.880 MHz
151.940 MHz
154.570 MHz
154.600 MHz.

(b) The authorized bandwidth is 11.25 kHz on frequencies 151.820
MHz,
151.880 MHz and 151.940 MHz. The authorized bandwidth is 20.0 kHz on
frequencies 154.570 and 154.600 MHz.

(c) MURS transmitters must maintain a frequency stability of 5.0
ppm,
or 2.0 ppm if designed to operate with a 6.25 kHz bandwidth.

PRSG Comment: The use of conventional NBFM ("narrowband FM")
transmitters, those having a maximum deviation of +/- 5 KHz, is again
permissible on the two MURS 154 MHz frequencies. On the three MURS 151
MHz frequencies, only the narrower deviation (+/- 2.5 KHz) is now
permitted.

Out units are five channels and have +/-2.5KHz deviaiton on
all 5 channels.

Other then type acceptance, I guess you could clip the magic diode in
an Icom IC28/A/H and turn down the power and use it on two MURS freqs.

Any ham transceiver with a 2W or lower power setting and a half deviation capability would satisfy the "spirit" of the regulations, however the type acceptance issue sometimes gives rise to a heated debate. But since a large number of potential MURS users are not hams, the general unavailability of low cost, type accepted HTs alongside the FRS/GMRS bubble-pack radios is one of the big reasons why MURS didn't catch on. I briefly used my Yaesu VX-150 for MURS, but I don't really have any reason to use MURS any more. The only activity I hear in my area is on the upper two channels, and is always business-related--probably hold-overs from when the channels were licensed. It's a shame it didn't catch on because it's a great service.

HF rebroadcast freqs for Shuttle Launch Control

I am getting a lot of Emails from people wanting to know HF freqs that might be rebroadcasting the Shuttle Launch Control comms that I am hearing here. I do not know if Goddard ARC will be rebroadcasting the comms for STS-114, but since it is so important a launch (Return to Flight), my guess would be that they might broadcast.

Here are the freqs that they used for the Shuttle Launch Control comms in the past:

3.860 USB
7.185 USB
14.295 USB
21.395 USB
28.650 USB

HF rebroadcast freqs for Shuttle Launch Control

Thank you for this info, Allan. Too bad they had to scrub today's launch. Hope they can launch by the weekend, but the solution to the problem with the fuel tank sensors seems to be elusive. I was just listening to NPR on the way home from work this evening... they were interviewing someone from NASA (I think) and he said that they had this problem before, but could not pinpoint what caused it. If they can't locate the problem and come up with a quick fix, the launch may be delayed until September.

While I'm no expert on the matter, I would have to say that there would be minimal, if any, difference between the two, as the technology was developed by Uniden. I'd guess the only real difference is the name, as a Radio Shack branded scanner can not use the same terminology due to copyright...

Bzzzzt, Wrong, Would you like to try again for what is behind Door #3?

MURS requires Specific Type Acceptance for that Radio Service, and no
Higher Powered Radios with user switchable Power levels would pass Type
Acceptance for MURS Radio Service........

Signal Stalker = Close Call = Uniden (PRO-83, BC246T, BCD396T etc)
Signal Stalker II = GRE (PRO-97)

The Uniden version captures signals faster than the GRE version. However the
GRE version picks up signals from a greater distance.

2964. Nasa Comms. In Birmingham, Alabama?

Newsgroup: rec.radio.scanner
Date: 2005-07-15 14:28:50 UTC
From: Chris_Gaming <chris_gaming@charter.net>
Message-ID: <DKPBe.4081$fs3.712@fe04.lga>
Source record: 12826

I have an AOR AR8200 MarkIII. I ordered it from the UK, so it's unblocked. This handheld receiver covers all frequencies from 500 KHz to 3GHz.

I live in Birmingham, Alabama; which is in north central Alabama. I have a simple question. Sitting here at home in my front yard, is there anyway for me to listen to the communications between Ground Control and the Shuttle and/or the Space Station? My exact location is Latitude: 33.57618 Longitude: -86.76385 I know I'm a newbie to this but I don't want to miss the chance to listen in on NASA communications if possible. BTW - I know a lot of websites broadcast the communications, but I want to use my own handheld receiver to listen to them, as opposed to just getting something relayed off a website. Thanks so much.

Ludicrous indeed.
Both 0 feedback newbie bidders who are driving the price up have registered
within the last week, so it looks like its safe to say theres some shill
bidding going on here or something.
I don't know what these things go for on average, but even the first legit
looking bid of $200 seems mighty steep to me for a chopped up band plan old
scanner like that.
Hell I couldn't even sell an AOR 1000 for $100 on ebay, and that scanner is
leaps and bounds better than the 43.

2967. Scans VHF but not UHF Freqs

I've been able to pick up Military Satellites in the 260 Mhz FM range with
mine, just using a 220 Mhz Ham Rubber Duck antenna! Most milsat listening
you need a beam antenna with a preamp, but not with the PRO-43!

For that reason alone I won't sell mine!

Pardon my skepticism but by the time any satellite signal reaches
earth you're talking signals in the nanowatt range. Thats the reason why
you need a beam and preamp, or a dish with a LNA. And you want
us to believe a consumer grade RS handheld can do this feat with
just a rubber duck??????? Come on.

I don't know how the military satellites in question compare, but it is possible to pick up the amateur LEO satellites and the ISS with a handheld and decent ducky. Of course a whip or beam works better, but if the pass is high enough and your antenna is pointed the right direction, it can be done. The time window is narrow, so you really have to actively chase the signal and adjust for doppler shift as well.

Ok........ I didnt mean to imply you were lieing. I really
did not think this was possible. Can you give some specific freqs.
Id like to try them on my VR 5K on a discone with low loss cable.
I have found discones pretty good at catching signals coming down
from a high angle. Good listening

My ICOM IC-T7 does a great job on the ISS even with the stock rubber duck while it is hanging on my belt. I can count on a good signal as soon as the ISS comes over the horizon.

I have also managed to copy some military satellite traffic on my PRO-43, but the signals were pretty marginal on the rubber duck. Mind you, at 45N, I'm probably on the edge of the footprint.

I have also picked up UHF mil satellites on my PRO-43 and stock rubber duck. It was comms between McMurdo, Antarctica and the mainland at around 261.?MHz This was from one of the new UHF follow on sats, which is a little hotter than previous series but was loud and clear on the rubber ant. The signal was first picked up using a military satcom antenna and then I switched to the rubber ant. I have owned a lot of scanners, commercial and mil radios and the PRO-43 is the best analog hand held scanner I have found.

Probably why cat eyes (blue dots) were outlawed on taillights
in the 50s -- the color screws up your depth perception. I notice
they're making a comeback.

Have had a few words with this fishman.
I asked him why a decade old scanner thats worth maybe $100 tops is going
for $300 .. Anything special about it ?
He said:

"For your information, I have just recieved payment for the scanner that
you said wasn't worth much. The reason this scanner sold so quick, is
because as most Pilots are aware of, this scanner is the Pilots choice, the
pre ban pro 43, not the new ones. The person that paid over $300.00 for it,
said they are going from 275-450. at the air shows......hmmmmm. So maybe
your not the smarter than the average bear.....I know my stuff. I had this
unit since new and I know what it's worth......so see ya....."

Pilots choice ? And $450 at air shows ?
Maybe I'm missing out, but I go to 4/5 airshows a year average, and I've
never seen any bought and sold there.
Don't really think offhand that theres that many folks with that kind of
money to blow at air airshow to buy a scanner on a whim.
And what good would a 1 way radio do a pilot ? Pre ban ? That affected only
the cellular range, not a range of primary interest to pilots.

This guy is as flaky as a fresh cooked biscuit.

It is definetely possible, BTDT. Why should there any difference to my satellite handheld phone, which also works just with some flimsy antenna?!

Years ago I bought a Drake TR 270 to do amateur sat. work.
(2mtr. uplink and 440 downlink) when I figured out that I was going
to have to get for an antenna and possibly a dual rotor setup to track
the sat. I dropped the idea. I think at that time you needed a beam
with about 12db of gain for it to work reliably. That translates into
about a 14-15 element dual polarized beam. That is one big antenna.
Plus any mil-sat equipment Ive ever seen invariably use the little
mini dish's to use in conjunction with it. Thats where I got the idea.
I guess things have changed. I know the signals that come down
from space are extremely low power,, with the possible exception
to ISS, I think they may be beaming their signals to earth and running
at a higher power so people can pick them up easily. A geo-synchronous
sat. at 25,000 miles out running on 40-50 watts isnt much power.
The OP gave me some freqs. to try on my VR 5K and Im going to
give it a shot and see what I come up with.. I guess I had a case of
"open mouth and insert foot"

2996. Re: Scans VHF but not UHF Freqs

Newsgroup: rec.radio.scanner
Date: 2005-07-17 17:03:18 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10507171048190.16458-100000@srv1.calcna.ab.ca>
Source record: 12756

On 15 Jul 2005, Doc wrote:

> Why would a scanner automatically scan and stop at VHF frequences but
> not UHF frequencies?
>

5 possible reasons:

1) The squelch is not set properly.

2) One or more of the UHF frequencies you expect to pick up is out of the frequency range of the scanner, or the scanner skips over the frequency or freqs you expect to pick up, because of the step size and where each step lands on, etc.

3) You are using an antenna unsuited to some of the frequencies you wish to pick up.

4) UHF stations in your area are, by sheer "fluke" or coincidence, too far away and/or the signals are too weak; or you do not have close enough to line of sight conditions to pick up these stations.

5) Your antenna is somewhat directionally sensitive and this happens, by sheer "fluke" (see above) to make picking up UHF stations in your area more difficult than would be otherwise.

You haven't been very specific with your question. Is this a problem you have actually had with your scanner, or is this a "hypothetical" question? What is the make and model of your scanner? What are the frequency ranges that it covers, and how big are the steps in each range? What is the size, type, and configuration of your antenna? Are you sure that moving from VHF to UHF scanning is the problem, and what makes you so sure of this? Do you even have a scanner? Have you done some basic things to improve your scanner's performance (if these are possible in your case) such as rig up a smooth power supply to filter out noise, 60 cycle hum, etc. and/or ground your antenna?

2997. Opinion of these scanners

Newsgroup: rec.radio.scanner
Date: 2005-07-17 20:43:29 UTC
From: Drifter <zespectre@askme.com>
Message-ID: <6dgld1ltmuthosit54g7nv8dfk65mu7jn1@4ax.com>
Source record: 12757

I inherited the following scanners..
PRO-46
PRO-92 (Win92 software and a data cable)
PRO-2052 (Data cable and ScanControl Software)
A few different types of antenna and miscl stuff.

So after a LONG time away from recreational listening I find myself
equipped to be back in the hobby

I've done some research and found some information but I was wondering
if any of these scanners should get a "particular job". For example
the PRO-2052 will become my "active frequency seeker" and research
leads me to believe it is the one to use for MilAir, but I can't seem
to turn up much specific info on the other units.

Thanks for the input

Drifter

Much depends on your needs.

None of these are capable of the newer "Digital Mode" systems that are popping up all over the place. Only the PRO-2052 is capable of Trunk Tracking. While the PRO-2052 can receive MilAir in the UHF spectrum, it can not in the VHF spectrum. All of these could be impacted in a negative way, once re-banding of the 800MHz spectrum occurs, which is already taking place in some states. If none of these are a concern for your area, and requirements, then I'd go with the PRO-2052.

Hey Bill, thanks for the reply though I think you misunderstood me a
bit. I don't have to choose between the scanners, I inherited all of
the equipment and was trying to decide what to use it for.

Oh, and the PRO-92 is also a trunking scanner though I'm thanking God
I have the software/data cable because I can't make any sense out of
the manual method of entering trunking.

The DC metro area is a real grab bag of frequencies right now with DC
itself having gone to a primarily digital system (guess I'll be
picking up a digital scanner eventually) but with a lot of
conventional simulcasting and a TON of non digital stuff (and non
800mhz) still in use.

I was thinking of using the oldest scanner (PRO-46) for monitoring the
Amateur radio bands, and the PRO-2052 for frequency hunts (since I
have the computer logging software as well) but I can't quite decide
what to do with the PRO-92.

It really does seem to be an uncertain time for the hobby, not like
the last time I dabbled back in '93 (geez I sound like a geezer don't
I <grin>).

My bad! You are correct, the PRO-92 does support Trunk Tracking...miss that in my original post.

You are also correct, I thought you were trying to choose which one to buy. Sorry.

As for what to use the PRO-92 for? It's good for seeking out CTCSS tone codes! Look on the back, by the actual Cat No., see if there is an [A], or [B] suffix after it. The [A] version corrected some minor bugs in the original design. The [B] is pretty much the same as the [A], but they changed the country they were manufactured in. One was Japan, one was China, can't remember which.

I have a Pro-92 in very good shape for sale. It was just repaired by
RS so the 90 day warranty is still in effect. It is the "B" model
with the latest firmware. I only have the black battery holder and no
wallwart. Looking for any reasonable offer.

Can be easily done with a PRO-43, its nearly as sensitive as the radios used for satcom. One of the early satcom radios (PSC-3) used a simple short whip to receive selective calling signals via the satellite while the radio was on a G.I.s back. He would then attach the larger CP antenna to transmit back to the satellite. You can uplink to some the UHF military satellites with as little as 5w into a CP 5dBi gain antenna. Normal power is about 20w. A dish for UHF sats?? Maybe you should read up on typical equipment used for this....

The difference might be big...the receiver in the satellite phone will be optimized for a narrow range of frequencies and may have more gain at those frequencies to compensate for the lower level signal. It's not just antenna type & size that are important.

The PRO-92 is a "B" version.

I'm thinking that I'll program the PRO-46 with "intersystem emergency"
stuff because it's keyboard entry and that is a royal pain in the
posterior! So I figure if all it has is nationwide freqs then maybe I
won't have to program it again anytime soon <grin>.

Hadn't thought about using the PRO-92 for the CTCSS stuff (heck I've
been out of it for so long I had to look up what CTCSS was!). Good
suggestion, thanks.

Ah, thanks for the clarification... I missed the 'II'...

Any idea what the approximate distance difference is with the SSII? I know
that I can pick up stronger signals from quite some distance on my PRO-83...
The local police repeater, which I believe operates at about 50-watts
(155.310MHz) trips the SS on my PRO-83 at up to just about 3-miles away
using a mobile mag mount scanner antenna from Radio Shack...

Usually the UHF satcom radios are full 225 to 400MHz, not that narrow.

You would think a quick review of the schematic would solve it.
Wait, they may not have a schematic as the shuttle has a few million parts!!

I'm being sarcastic and I really hope they find the problem and get back to
space.

3010. Uniden 72XLT - Close Call RF Capture Technology - what is it ??

Newsgroup: rec.radio.scanner
Date: 2005-07-19 18:27:59 UTC
From: Andy <no@nospam.co.uk>
Message-ID: <dbjgmqqvl1@newsg1.svr.pol.co.uk>
Source record: 12770

Just seen an ad on ebay for Uniden UBC72XLT saying it has "close call RF capture technology". Which reckons it will pull in close signals of nearby traffic instantly ! - Now sorry for appearing a little cautious here but that cannot be true, surely ?. How far can it do this up to and what power must the transmitter be transmitting on ?. Surely it cannot pick up the, say, average taxi over the street transmitting to his base can it ? (just an example for arguments sake !) ?

Cheers
Andy

3011. What antenna for the 'Shack Pro-2028

Newsgroup: rec.radio.scanner
Date: 2005-07-19 18:31:24 UTC
From: salmonsm <salmonsm@missouri.edu>
Message-ID: <1121797884.718399.244090@f14g2000cwb.googlegroups.com>
Source record: 12771

Hello,

I've obtained a Pro-2028 and haven't seen it yet, but from the description the whip is not present. So I'm looking into getting an external antenna for it, but have no idea what antenna jack it has. I've tried support.radioshack.com but the exploded view doesn't show the jack and the description of the jack in the parts list is as follows: "antenna jack." The RS part number for the jack is 10730703. (Still trying to get useful info from Radio Shack about it). Does anyone here know what connector the PRO-2028 uses? My plan is to get a rooftop antenna and the one I want comes with BNC connections. Think this could be a compatible combination?

Thanks,

Michael Salmons

Don't rightly know - I think they use the same base/repeater scheme as other cell phones so to my knowledge they are not using any dedicated frequency. But then, I'm just a casual amateur.

The interesting thing about OnStar, when you first contact them to set up your vehicle and account you do it by pressing the blue OnStar button in your vehicle. They then ask you for such information as your name, home address, home phone, credit card number, CC security code, your occupation, where you work, and they ask you for an access code and password to ensure you are you when you need help. All that information is dutifully repeated back to you by the OnStar representative, for accuracy, so the information is aired twice.

Gives me warm fuzzies!

You read correctly... I assume you have been hiding away somewhere for the last year? Uniden has Close Call, and Radio Shack has Signal Stalker. Both are the same, and developed by Uniden. Note, that's NOT Signal Stalker II...

It will instantly bring up the strongest local frequency. Distance from scanner depends on the signal strength (i.e. relative power output) of the transmitter... As an idea, Fast Food drive through, a few feet from the box at most. My local PD (50-watt transmitter on 155.310MHz up on a LARGE hill), I can get out to as far as 2 to 3 miles with a clear view of the antenna, though terrain and the like (yada, yada) will effect the distance... I'd say average would be about a few blocks for a moderately powered transmitter. I believe the specs say up to 1000 feet...

Was wondering if anybody has ever heard of these new NASCAR scanners from Uniden? The BC78XLT, or maybe the BC98XLT, or how about the BC230? Me neither.....

Whoever wrote up this Spec Sheet must have been on a good high that day. Front page is fine, back page lists non-existent hardware, even at the bottom, where all three units have the same barcode...

Another very important thing was "Does the UK version have Close Call on it"
????. Some (most) say it doesn't !! - so i have wasted money again, bearing
in mind i already have the IC-R5 which is similar, but was buying the 72XLT
purely for the Close Call feature !!!! hmmmm

Cheers
Andy

FOR SALE:

BC796D Uniden Bearcat Digital Scanner.

Only about a month old, and I have the original receipt, box, and all that came with it. I purchased two, brand new, for a computer controlled data logging project. Now that I've compiled all the data I wanted, I no longer need both. My loss, your gain!

$475.00 shipped within the U.S.

Thanks,
Bill

Damn what a day! I decided to get another scanner as it comes in so handy at work I wanted an extra in case one dies. Looked at Ebay for a while, used 95's were going for too close to the cost new. I had meant to buy another 95 when they were closing them out, never got around to it, you know how that goes. Anyway finally went to RS today bought a 97. It was nice as it's noticeably smaller than the 95. Tried to program it and problems. It's almost the same as the 95. Programmed the city, put it in closed mode and programmed the police talk groups. It would keep stopping on the control channel, and would pick up all the talk groups, not just the ones I wanted as is supposed to happen in closed mode. Checked everything according to instructions, cleared them all, re did it again carefully following the instructions, same results. It's like it just will not trunk, even though it says I am programming it in MOT mode which is what they use here. It also was not showing the talk groups when it would receive. Finally gave up took it all back to the shack. As expected no one there knew anything about scanners, they took my word for it that something was wrong, started to get me another one when I noticed they had a 95 in the case marked "clearance". I said hey just give me that. It was $80 cheaper, I thought great. Got it home, Noticed 2 stickers on it saying it had a premium (or something like that) warranty as it as a return that had been factory serviced. I thought "oh oh". It programs fine and trunks, BUT reception is shit. I have a RS 800 Mghz. antenna on my old one, tried switching them, still the same, old one sounds great, new one like shit. Finally took it back with the old one that works. Sales guy started to try to tell me "maybe it's not the scanner". I stopped him right there said I figured you would think that, I brought a working one if you want to hear the difference. They said no. Wanted to give me another 97 as the 95 was the last one they had, I declined. I'm a little gun shy now.
So has anyone had any trouble with the new 97's? Think maybe I'll just buy a Uniden on line somewhere. What a frustrating day!! <G>

The PRO-97 is an excellent scanner! Some systems require you to skip the
first channel when programming. Possible?

>> Damn what a day!

We use the Mot.Type II here. My 95 works fantastic, and the instructions for the 97 were almost identical. The only difference I could see was a slight difference in things like to change mode, it was a different button and such. I did not read anything about skipping a channel, and I did try to very carefully follow the instructions step by step, twice, and got the same results twice. That's why I was wondering if it was something I was doing wrong. I remember well a couple years ago when the city switched over to trunked here, I already had my 95, and it took some frustrating trial and error trying to get it to work. The manual was not real easy to understand, but of course it's easy now. It would of course have helped if the "staff" there at the shack had any idea what they were doing, but alas none of them had a clue how these work. I have been very happy with my 95, just wanted an extra on hand because I have come to rely on these things at the one job. It was worth it too me to have an extra around. The 95 they exchanged it for programmed fine, it just did not work well at all at least compared to my old 95. I suppose if I did not already have the other 95 I might have not known anything was wrong for a while.

Anyone have any dealings with these guys? Good or bad? I had intended to buy one of these late last year when I saw them looked kind of nice. never did, now after the experience today trying to get an extra to go with my 95 I guess I will give them (Uniden) a try, but I don't know of any stores here that sell them. If I don't hear any bad stuff about these guys I will try ordering one from them. Thanks.
E-mail addy is good BTW if anyone has anything to say they would rather send that way.

These would be American, and I'd also assume Canadian, as I don't believe Uniden has alternate part numbers for the Canadian market, though I could be wrong...

In any case, the two responses I have received so far are analyzing this thing too much... I was just pointing out some pretty bad mistakes in the Spec Sheet... Just requires a look and a laugh; no analysis or additional questions are required to accomplish this...

Indeed ... I pick-up OnStar transmissions all the time, and it can be from anywhere in the country.

Sometimes I hear the full conversation, or just one side of it, but it's always clear as a bell.

I get a kick out of the Cadillac boneheads crying for unlocking service because they did the obvious.

I especially like catching people calling in to retrieve their "private" messages on voice mail.

That's worth the price of admission alone.

Maybe our eavesdropping days are numbered, but scanning the cellular ranges is still a lot of fun.

Oops.. I'm sorry about that... I didn't notice the UBC, or that you were in the UK...

I don't see any mention of Close Call on these sites based out of the UK, however I DO see the symbol for the Close Call on it's face, and it is branded UBC72XLT, so I can't say for sure... This may just be a picture of the Australian UBC72XLT which DOES have Close Call...
http://www.nevadaradio.co.uk/acatalog/UBC_72.html
http://www.ogormans.co.uk/airband.htm

It would appear that the UK version does NOT have Close Call. I have found a sight with an image of the actual UK version...
http://www.thunderpole.co.uk/uniden_bc_72.htm

If they showed an actual image of the unit you bought, look at the face; there will be a symbol between the HOLD SCAN 1 and 4 buttons that looks almost like a spider web... If it's there, then you have Close Call, and most likely an Australian version of the UBC72...

I did a search on eBay and eBayUK and came up with only one hit on the UK site for a completed UBC72, and it didn't say anything about Close Call in the auction, so hopefully that wasn't the one you were looking at and bought...

I don't think it is a matter of intelligence, but some people simply have not had much, if any, real exposure to following complex instructions and their minds simply freeze under the pressure. When walked through the process slowly and methodically, they tend to then understand what the words actually mean. We forget that scanner instructions are laced with specific wording and phrasing that one can find nowhere else outside of the scanner world, i.e., a backwater dialect.

Thanks again, I ordered one when I got home from work this morning, and they already sent me the Tracking info on the shipment. Can't beat that for service. Down loaded the manual, will have time to read it through a bit before it gets here so it should be easier to get it going. Looking forward to seeing how it works. Still bothers me that RS seems to care less. I guess the turnover there is just too much any more for them to attract "help" that stays around long enough to be able to know something about what they sell. In any case I'll let everyone know how this one works.

As I recall, television stations with over the air broadcast, see
http://www.angelfire.com/pa/n3pbq/tvfreq.html for detail. Of course
interspersed is likely military. Much military is between about 200 and
400mhz mostly military air. I occasionally find something going on in
this range, but not much...

Wide band receivers like the Yaesu VR-5000, VR-500, and the AOR 8600 and
AOR 8200 receive this space. Check out
http://www.universal-radio.com/catalog/widerxvr.html for a list of some
of the current wide-coverage receivers available.

Alan

FOR SALE:

BC796D Uniden Digital Base/Mobile Scanner. Like new, about one month old, have original receipt from Universal Radio. Still under warranty!

I purchased two of these, for a data logging via PC, to determine active frequencies in my area. My list is compiled, and I no longer have a need for two. Scanner is absolutely like new, never left my office.

BONUS: I will include licensed Butel ARC250 PRO Software at no extra charge! A $69.95 value!

I paid $534.95 + $69.95 = $604.90

Your cost, only: $450.00 including shipping! (U.S. Only)
PayPal Accepted!

Thanks,
Bill Crocker

I bought a replacement NiCd insert pack from E. H. Yost
many years ago and I installed it inside the original BP-200 case.
They now sell NiMH inserts, too.

The name on the web has changed to Batteries America. Check out the web
site:

<http://www.batteriesamerica.com/hamradio.htm#Uniden>

I've bought UPS other ham radio HT batteries from E. H. Yost over the
years with good results.

I am thinking of getting a new handheld scanner.
I am NOT interested in a trunktracker.
I only want to scan 30-470 MHz, analog, FM and AM mode for aircraft.

Any suggestions?

3051. Re: 512MHz to 806MHz

Newsgroup: rec.radio.scanner

From: ai8o <ai8o@LexComInc.net>
Message-ID: <dbu7tj$3nf0$1@news3.infoave.net>
Source record: 12663

Mostly TV signals, a radio astronomy quiet band in what used to be channel 37, and some mobile aircraft navigation aids.

The FCC wants to move public safety comms into the 700 MHz range, but this idea is none to popular with NON-federal public safety users, and is consequently going nowhere.

nothing really to get excited about, unless you like to hear

BRAAAP BRAAAP BUZZ WHINE!

Try the ICOM R-20. Top of the line if you do not need digital or trunking.

If you want to buy a "new" handheld scanner, and you want to monitor "military" aircraft, then you're best choice would be Radio Shack's new PRO-97, Cat #20-527, at $219.99. It's a Triple Trunk Tracker, but you can just ignore that feature.

http://tinyurl.com/9vlym

Or, if you just want to monitor commercial aircraft, then the Radio Shack PRO-82, Cat #20-315 will meet your needs, at $99.99.

http://tinyurl.com/pajl

If you're not in a hurry, Radio Shack occasionally prices the PRO-97 at $199.99, and the PRO-82 at $79.99. You might want to wait, and watch their web site for a sale.

It is true that almost everyone outsources. Intuit also does. I have had very good support people from India with impeccable English and good skills and I have also had horrid ones who could not understand or speak English and did not know what they were doing.

I was told by one TS guy from India... one for Intuit that they are really trained and it is a lengthly process etc. etc. He was excellent. So I think each company decides how much to invest in this outsourced TS. Even if they don't outsource... if they don't train then it is garbage... It is the company's ethics rather than merely outsourcing per se.

5`2 to 806 mhz is sued for UHF tv each channel is 6mhz wide

channel 14 is 470-476 with audio at 475.75 in wide FM mode

you can calculate the frequency if you know the channel
(channel - 14)*6 + 475.75

And then remember that the FCC offsets *many* by either +0.01 or -0.01 MHz
to help against interference problems. Not real important when receioving
in WFM but curcial when using NFM for weak and multiple station receiving.

Source record: 12682

Hi,

I just picked up a used Sony Air-8 and it has an audio problem, and I've gathered from what I've read online that this is a common problem with this model. This made me wonder if perhaps the solution's well known as well. The symptom is the audio through both speaker and ear jack is very, very low, but just audible, and the volume control doesn't change the level at all. Any information would be greatly appreciated!

Michael Salmons

Orange County is on a Motorola trunked system,
AND they're encrypted.

The radio you have is useless in being non-trunked,
but even if it did trunking, the encryption makes
it impossible to listen to them.

You could probably replace it yourself, or have a local ham radio buddy help you.

To order parts call 1-800-843-7422 or visit your local RadioShack store.

REF # PL001
CAT # 10791416
DESCRIPTION: LAMP,PILOT 8V 0.2A
NP PART # L0200

Or, if you're not comfortable doing that, take it into to your local Radio Shack, and they can send it in for repair.

Bill Crocker

3081. BC-895 FS

Newsgroup: rec.radio.scanner
Date: 2005-07-28 01:25:44 UTC
From: t <chinatom@hutchmail.com>
Message-ID: <dc9c6o01m9t@enews4.newsguy.com>
Source record: 12694

Uniden BC-895XLT. Absolutely mint condition with everything that was
included when new. Also includes a programming cable. TrunkTracking radio
but also covers Military Air band.

Here is a link to Rich Wells 'Strong Signals' site with a very positive
review of the 895.

http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=fi&class=recv&num=002

Asking $200.00 plus $15.00 Priority USPS shipping.

Also have a Pro-92, looking for reasonable offer.

thanks

Please reply to wfm013@yahoo.com

TIA

bill

Thanks again for the recommendation. Got the scanner today. It was a
"challenge" to learn how to program for trunking, but after a while
I got the hang of it enough to get the city police and fire. Great
little scanner, will be MUCH easier to use at work because of the size,
and I very much like the way the system works.

I'm just curious - you're free to sell it for whatever price you want, but
the last 895 I bought was in new condition, box, all accessories, with a
cable and scanning software, for $110.

Why are you asking $215?

3088. Anyone experience with "Channel Stalker" feature on Pro83 ?

Newsgroup: rec.radio.scanner
Date: 2005-07-29 20:11:47 UTC
From: Andy100 <andy100@aog.com>
Message-ID: <dce2hp$gb9$1@news5.svr.pol.co.uk>
Source record: 12700

Has anyone had any experience, good or bad, with the "Channel Stalker" feature on the PRO83 handheld scanner. I'm sure i have seen this being asked in here before but cannot find the answer.

I am thinking of buying one of these and had a few questions:

1) I assumed that the "Channel Stalker" feature would instantly find the frequency of, say a PMR radio across the road, or taxi over the road, am i right in thinking that (assuming the frequency the mobile was transmitting on was within the limits of the scanner)

2) Do ALL Pro83's come with this feature. I know the Bearcat UBC72XLT doesn't, while the BC72XLT does ! - is it the same for this scanner, or do they ALL have the feature on ?

3) Which is better ? Channel Stalker, or Uniden's "Close Call", or are they similar technologies ?

Thanks for any help. Just need a bit of info before buying. I have Googled for Channels Stalker, but there doesn't seem to be a lot of info out there.

Cheers
Andrew

3089. NE1 looking for the FCC Database??

Source record: 12702

First off, the Pro-83 feature is "Signal Stalker". It will stop on the first RF signal detected in the band(s) being searched, generally the closest and/or strongest transmitter. All Pro-83s have this feature. The Pro-83 is made for Radio Shack by Uniden, so it has the same basis as the "Close Call" feature on Uniden-branded scanners. There are some feature differences in operation, and I wouldn't be surprised if the Uniden-made Pro-83s are not quite as sensitive as the Uniden-branded scanners. The BC-72XLT and the Pro-83 are very similar, but do have some operational differences. I have the Pro-83, which is a nice little scanner, but not the BC-72XLT or the BC-92XLT (which is the next level up from the Pro-83), so I can't offer a comparison between them.

I have the Pro 83. Yeah, that is how it works, but I find that I have to be pretty close to a radio source before this feature will pick it up, unless it's a really strong source. A PMR across the road or nearby taxi (like within 1/4-1/2 mile) should be reachable.

I like this scanner. It picks up everything my Pro 95 does, except of course the Pro 83 is not a trunking radio.

Interesting site. I'd like to know how you got 8dB more gain with a pair of Scanner Warehouse beams over a Create Log Periodic? Do you know the actual gain of each single antenna? There is an optimum spacing for a specific frequency antenna, how did you arrive at the spacing for all frequencies the antennas cover?

That is going to depend on how far and wide you are scanning. The wider the
"net" the longer between hits is going to be. Also if you are going to get
this make sure you are not going to be wanting to pick up trunked systems.
If there are any trunked systems you would be better off paying the extra
and getting a 246T. They are about twice as much, but you have trunking, and
close call, and they are very small also with all this in the package.
--
Experience is something you don't get until just after you need it.

3097. AOR AR8000 reset button ?

Newsgroup: rec.radio.scanner
Date: 2005-07-30 20:55:59 UTC
From: Andy100 <andy100@aog.com>
Message-ID: <dcgpglogl1@newsg2.svr.pol.co.uk>
Source record: 12709

Is there a quick way to restore factory settings to the AOR AR-8000 handheld scanner. I got one off e-bay and the previous owner had all the channels full of frequencies that are 'dead' up here. I can manually delete each one, or overwrite with my own, but wondered if there was a simple set of key-strokes which wipes the memory. Similar to the Realistic models where you hold 2, 9 and switch the unit on.

Cheers
Andrew

Welp Mike I didn't figur out anything, but the 2 guys that did, tell me at 8' 4
" they are dead center of the 10KHz to 1.3MHz rang, they also say on a vertical
antenna it dose not mater. And they say the gain is plus + 8 over the Create. I
really have no clue of the what's or why's I'm a software and computer guy :-)
They on the other hand are both radio engineering type qeeks that set around
and talk about wave lengths and opening up the clarifier and moding the scanner
for a discriminator output, half the time I have no clue about what the heck
thay are talking about.

OK, makes sense. You should find a way to verify the the gain and
spacing info, it's incorrect and misleading. Nice site otherwise.

for aor-8000
there is a hard reset an a soft reset
verify you do have frequencies programmed in the scan banks if htere are
no frequencies programmed it may act funky

go to the AOR web and download the PDF manual, the specific reset
instructions can be found there

If you are scanning between 440-450 you should not even be able to tell. If you could hear the guy with the radio, it would sound like you had another radio, not a scanner. They scan so fast that if you know that close to what you want to hear there really is no delay. Now if you are scanning say from the 150's to the 460's you would occasionally miss a small part of some transmissions. Normally the only real "miss" you are going to get with a small spread is if one call is holding the scanner, then when it lets go you pick up on another one already in progress. For a conventional system they should work fine, but more and more places are going to some form of trunking.

Ever since a lightning storm last week it seems like I'm getting a lot of line noise (60 cycle hum) from my Pro 92. Running on batteries it seems fine. Would you all consider it likely that the "wall wart" is the problem or is there some other type of transformer in the radio itself.

Thanks

Drifter

Sure sounds like the AC adapter could be the problem. I would take it to a
place like a RS, and ask if they have a "universal AC adapter" that would
fit it. Act like you don't know what they are, and see if they will demo one
for you. If they can see if the noise is gone when you try theirs, then you
will know if you need to replace the one you have.

Can someone not just post what the reset procedure is. I had already looked
at that manual, but couldn't find them,

Thanks
Andy

Why act?? Tell them you think the original one has become noisy and if
their's runs the radio and is nice and quiet you'll be purchasing it.
Also, instead of the universal model, test one with the same voltage and
current capacity as the original.

3106. Rider revolt on motorman-only "L" train

IN THE SUBWAYS

Straphangers flex their muscles
Ray Sanchez

August 1, 2005

Little trace remains of the early-morning mutiny on a conductorless L train in Brooklyn.

Still, the rebellion is noteworthy as the Metropolitan Transportation Authority moves ahead with plans to eliminate more than 300 conductors on four subway lines in coming years.

The tale of mutinous MetroCard holders was recounted by Jon Schachter, a Manhattan resident and longtime subway activist, who deciphered it from transit radio frequencies.

It starts sometime after 2:30 a.m. on July 10, in the tension-filled days after the first terrorist bombings in the London Underground. Schachter was riding the L beneath the East Village, listening, as he always does on the train, to his portable scanner.

"There was a Manhattan-bound train and transit control center says, 'Hold at Lorimer with your doors open,'" Schachter recalled.

That would be Lorimer Street station in Brooklyn. It was unclear what the trouble was. Maybe signal problems. There was a track gang working on the line beneath Sixth Avenue in Manhattan, Schachter said.

"They held the train at Lorimer for a while before they said, 'Proceed to Bedford and discharge the train,'" he said.

The lone motorman took his eight-car train to Bedford Avenue, the last stop in Brooklyn before the train enters Manhattan via a tube under the East River. One-person train operation, a money-saving measure known as OPTO, was introduced on the L last month - on nights and weekends, for now.

The controversial move counters the transit agency's supposed focus on security in the wake of terrorist bombings on trains in London and

Madrid. The MTA plans to eliminate the positions of 313 train conductors on four subway lines, starting in 2007, according to a published report.

"The train proceeds to Bedford Avenue and, of course, there's only one person on the train," said Schachter, referring to the train operator. At that hour, people leaving clubs and restaurants along Bedford flock to the subway.

"He calls back on his radio and says people won't get off the train," Schachter continued. "This guy has eight cars of people to discharge by himself. They called police and it was almost three in the morning and the police never showed."

Frustration on the L line had been running high for months. The MTA hopes to run its first automated trains on the line. Service disruptions have been frequent as the line's antiquated signal system is replaced.

Schachter believes riders at Bedford Avenue that morning had had enough.

"There were too many people," he said. "They said, 'No, we're not getting off. We're not taking this crap. We want to get home.'"

A New York City Transit spokesman, Charles Seaton, said there was no record of the incident. But this was not a denial. "It means we can't find a record of it," he said.

"I'm sure he was sound asleep at the time," Schachter said of the transit spokesman.

A police spokesman yesterday said the incident would likely go unreported by cops. "There was no crime committed," he said.

So Schachter's recollection of radio transmissions is the hardest information available on the mutinous L line riders.

"Finally, somebody at the control center said, 'I have a solution, call me on the phone,'" he said. "Moments later you hear the announcement, 'OK, we're going to send this train and the next one into Manhattan.' They let the train roll because people would not get off."

"I know that occasionally there are mutinies, but I didn't hear the details of that particular one," said Andrew Albert, a nonvoting member of the MTA board who represents riders.

Last week, London's largest transit union threatened to strike if rail guards were not reinstated on all tube trains. Rail guards, as London's conductors are known, were eliminated decades ago.

A motorman on the L line yesterday said passenger mutinies are not uncommon.

"People get fed up," he said. "If they don't sense that it's a dangerous situation, they're not going to get off your train."

He added, "From our point of view, it's only a matter of time before the New York subway is attacked. When it happens, I hope I have a conductor on my train."

I just looked in my 8000 manual and all I can find is the soft reset.
It doesn't seem to clear the memories. Hold down the clear key while
turning the radio on.

Can't find the 'hard' reset anywhere so far.

Ben

The reason I said "act" was I don't know if the poster wants to buy anything
from RS. A lot of people have all kinds of problems with them.

3109. Anyone Have Info on Rock County Wisconsin?

Newsgroup: rec.radio.scanner
Date: 2005-08-01 17:01:51 UTC
From: zerg90 <zerg90@gmail.com>
Message-ID: <1122915711.080676.161830@g47g2000cwa.googlegroups.com>
Source record: 12721

I was doing a little research on Rock County Wisconsin. Anybody know what 159.27 and 154.04 are used for? Can anyone confirm that 153.95 is the input to both the North and South Fire Ops repeaters? Is 158.73 now a repeater channel? Is 155.55 a repeater at the jail or courthouse? Does Beloit FD still use 452.90 and 453.4875? What does Beloit PD use 453.5625 and 453.9625 for? Did Beloit DPW move from 154.10R in 1994 to 155.94R now? What does Janesville FD use portable radios on 150.775 and 150.79 for? I just noticed that the Sheriff has a link radio on 457.90 - perhaps this is a link to Beloit FD? RadioRef says that 155.685R is PD tac in Janesville - true? Rock County Sheriff also has 25 portable radios licensed on 159.03 - maybe these are for portable extenders?

I checked various sources around the Internet, but was unable to come up with detailed info.

Thanks Ben, yeah i had the same problem too. I know of the soft reset, but it doesn't wipe the memories back to factory settings. Think i might just clear them all manually. You'd have thought AOR would include this feature though !

Cheers
Andy

Glad to hear it was a simple fix. I am not a RS basher, but you read a lot
of posts here from people who seem to have a real ax to grind with them. I
have had trouble with a couple things I bought from the Shack, but I NEVER
got ANY static from them about getting my money back.
I now have a 246T that I very much love, but my years old Pro-95 still
works great and is still in daily use by me. Before the City went to trunked
system here I was using a many years old, passed down to me, Pro-79. It is
so well used that you can't read the buttons any more, yet it still works
fine.

Not being a lawyer, I can't say. I would "Guess" that if you did that, and
they could prove you did, like his phone was tapped and they heard you do
it, or you were stupid enough to admit you did, that you could be in for
some trouble. Whether they could convict you of anything would probably
depend on your local laws, but if something went bad, say someone got shot
and they felt it was because you called him and told him, I would guess some
judge would try to find some way to make you miserable.

Hello fellow radio/scanner folks. I'm looking for info on discriminator tapping.....seems like I have a lot of questions. And I cant seem to find any answers for them. And yes, I have 2 scanners capable of the mod.

Is there a website that explains in full detail how to do this?

Once i do the discriminator mod, do I need any softwere to control it?

How does it get connected to the computer?

Can I receive police MDT data?

What other data can i receive?

If anyone has the answers, please steer me in the right direction...because im kinda lost on this!!!!!

```
What's the connection between passengers being fed up with delays/discharges
and there not being a conductor on the train? I guess if there had been a
conductor, he could have instructed passengers with statements like "I don't
know what the problem is, we just have to discharge the train."
```

This is not true in the United States, as I understand it.
From NF2G's very nice site: "Section 705 (47 USCA 605) states that it is unlawful to disclose the content of radio transmissions overheard unless they are amateur radio traffic, broadcasts to the public or distress calls. It is unlawful under this section to use traffic monitored for personal gain."

Please note that police transmissions are NOT "broadcasts to the public" but are rather two-way communications. Unless the law has changed drastically since my youth, it is in fact, in the US, illegal to disclose the content of monitored transmissions unless they are intended for public use.

You have taken it off to compare the Diameter of the knob to the shaft? Was
the crack there before or after you pulled the knob off?

prepare to have your ad cancelled . you have offered a copy of
" Probe " software with your auction which you are NOT
authorized to resell. that maker allows you to buy it , but NOT to
resell it and aggressively attacks those that try.
(I have already experienced his rath !!!!) try to modify
(by adding on to it) your auction , right away, to say that the
probe software is included " FREE " , as a gift , to the
successful bidder or just show it (next time) but NOT mention
it in the auction , if your auction gets cancelled !!!!
(might work, might now .... dunno)

I took the trouble to actually buy his software (3X to support the
author) instead of using a (freely available) pirate
copy. in return I got attacked on ebay when I offered it
(like you) in a auction , along with a scanner. like
everything else in life , there are two sides to every story.
myself, I don't subscribe to the concept of paying money
for something and not owning it. in his case you pay him
the money and HE owns it for you.

with me , his actions have cost him dearly as I have
taken " special care " to give him some of my specialized
attention in return for his. posting his " software license "
info on his web site would go a long ways to heading
off future issues , but I suspect (as I'm sure he does)
that such postings would drive off a bit of his potential
business too.

just FYI ....

k..............

I have this for sale on ebay:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5793370818&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

Be sure to check the frequency specs.

Thanks

Dave

When I first read your post I thought it was something like holding
the func button on the side and turning it on. Then I looked at the
manual and no luck. Don't wanna try it on mine...

I have an old program that loads/reads channels that may be able to
clear all channels but I'm not sure. You may want to look for the old
AR8000 software.

start with your favorite search engine, that'll keep you busy for weeks!

3129. Software Development Questions

Newsgroup: rec.radio.scanner
Date: 2005-08-02 21:24:00 UTC
From: Dave <SRPro@nospam.com>
Message-ID: <d2pve1hiq2ga0cnbqkpsu1kipg2kbedssl@4ax.com>

Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello,

I'm in the process of writing a new Windows based audio recorder and would like to find out how people feel about some of the features I am thinking of including. If people who use software VOX recorders could tell me how they feel about whether some features I am considering adding are useful, it would help me to make the new software better.

This is an informal survey and I know many people hate surveys. But if you can help provide some answers to my questions, I can use this info to make my recorder better. A competitor can use this info too, to make their product better. Everybody wins if everyone knows what people expect to see in a recorder.

I've already published a free VOX recorder for almost 10 years but didn't put many features on it that people have been asking for since I first wrote it. It was too hard to modify since it wasn't designed with all the desired features in mind at the beginning.

Here's some of the features I want to add and was wondering whether these are useful enough for people to want to pay a small amount for....(if you don't mind helping, I would really appreciate it).

++++++++ If you could indicate a YES or NO for each feature I listed that would be a great help.

*** The ability to separate VOX events into separate files for each event. As well as dividing the files by time-span or time of day. And of course that requires an auto-file-naming capability.

*** A Review Button: Pushing a button in order to hear the last VOX event that was captured. (or the last 30 seconds, rather). The audio would have to be kept in memory and so it would have a limited length.

*** A repeating clock/calendar to control automatic starts and stops like a VCR has.

*** Splitting the stereo content into two mono output files
and allowing a separate VOX setting for each mono output
file.

*** Having the ability to record .wav files with more than 2
stereo channels, (such as 4 channels) I think this might
require MS Direct Show....but am not sure yet.

*** .MP3 file output format....in addition to the native mp3
support MS already has for .WAV files.

*** A spectrum analyzer for viewing on the front panel
during a recording or while monitoring the audio input.

*** A complex looking (busy) style of display with lots of
blinking lights, clocks, meters, log and stats all to make
it look sophisticated like a lot of receiver panels look.

or

*** A simple basic looking display style with nothing but
the very basic controls.

or

*** both types of panel formats with a switch to change
them.

This next question is not an easy one, but I'm wondering how
much people would pay for a recorder that they think is a
very good piece of software:

*** $5 to $10 USD price range
*** $10 to $20 USD price range
*** $20 to $50 USD price range
*** above $50 USD if it has everything imaginable included.

Not very scientific, I know....

I didn't include a full feature list here because there are
some things that obviously need to be part of a recorder,
like a log file and an auto-start recording control. But
some of the features I listed will take some effort to
produce and I want to avoid wasting a lot of time writing
code that will not be used much.

Feel free to add the features you need to have that I did
not mention, if you think it'll be widely needed by others
too.

And thanks in advance for helping!

Dave

Hi Dave!

I think it's super that you are continuing to enhance your software. Do you want us to respond in the newsgroup, or do you have an email address you'd like us to use?

Thanks,
Bill Crocker

I thought it was a great idea as well and prepared an answer via Outlooks "Reply" function. After pressing "Send" I got a message back saying that the address SRPro@nospam.com had been "rejected by the server". The reply also said "That domain does not have a proper MX record" whatever that means. (That sounds serious doesn't it? I mean not having a proper MX record! I didn't think this was that kind of a place!)

Regardless what "Dave" is planning sounds cool and I'd like him to proceed. Also to post a suitable e-mail address if he's interested in responses.

3132. Patrick AFB Area Log - Tues, 2 Aug 2005

Newsgroup: rec.radio.scanner
Date: 2005-08-03 06:24:35 UTC
From: AllanStern@aol.com
Message-ID: <9e.2aef3817.3021bd23@aol.com>
Source record: 12744

Patrick AFB Area Log - Tues, 2 Aug 2005
==========

MAKO 11: F-16, Homestead
10:00am: At Avon Park Bombing Range; Tactical Air Reconnaissance System (TARS) work.
[292.2, 138.125, 307.1]

NASA 963: T-38N #59-1603, Johnson Space Ctr, Houston.
10:20am: My favorite NASA T-38, flown by a YL pilot-astronaut; lands on Shuttle Landing Facility Rnwy 15.
3:55pm: Departs.
[284.0, 125.075, 132.65, 128.55]

BOLT 21: KC-135R, MacDill AFB 6AMW
10:30am: Inbound MacDill; 15 pax, 4 air crew.
[327.6, 311.0]

US COAST GUARD, Port Canaveral
10:05am: Announcement re disabled vessel "Hot Line." Also Tow Boat with "Hot Line."
[157.1]

SHARK 21 - 24: F-16, Homestead ARB 482FW
10:20am: Arrive Avon Park Bombing Range.
[292.2, 285.725, 139.8, 307.1]

KING 77: WC-130H #65-0977, Keesler AFB "Hurricane Hunter"
11:05am: Pattern work at Patrick AFB.
[133.75, 132.65]
Photos: P8020269 through 8020272.

LIMA LIMA 70: P-3C, NAS Jacksonville VP-30 "Pro's Nest"
1:30pm: Touch-and-goes at Patrick AFB.
[133.75, 269.375]

N21NG; LearJet, Northrop Grumman JSTARS Integration Facility.
2:10pm: Departs KMLB.
[118.2, 132.65, 124.8]

USCG - PORT CANAVERAL
2:20pm: Comms with unit 423.
[157.15]

COIL 01: F-15, FL-ANG 125FW, Jacksonville IAP.
2:20pm: Area transition, northbound.
3:50pm: Area transition.

[319.0, 256.875]

NASA 918: T-38N #66-8384, Johnson Space Ctr, Houston.
2:35pm: Inbound Shuttle Landing Facility.
[126.525, 133.475, 124.8, 128.55]

NASA 912: T-38N #65-10354, Johnson Space Ctr, Houston.
2:35pm: Departs Shuttle Landing Facility.
[128.55, 132.65, 134.0]

AKULA 31: F-16, Homestead ARB 482FW
3:00pm: Work at Avon Park Bombing Range.

Well if you would have told us what 2 scanner you have maybe some one could have pointed you to the right URL that not only answers your questions but shows just what and how to do it.

I'm not sure if this discussion has come up yet, so I guess I'll give er a
go.
Has anyone purchased and/or used the 396T yet?
If so, what are your impressions over the 296, APCO25 decoding, rx,
programming, etc.

thnx

Lou

Does anyone Know a good site that shows how to program a trunked radio system into the 245. Years ago our town went to a trunked system and i was able to program them all in , whether correct or not it worked.
Now a neighboring town has a trunked system not sure what kind but now the Frequencies and the talk group codes.
Any help would be greatly appreciated,
- TOM -

This would probably be a good place to start. Don't know that particular
scanner, but you need to know what type of system they have where you want
to listen. This place may have that info.

Lou,

Go to the YAHOO Groups group for the 396T. Literally thousands of
postings relative to this new scanner.

As you can see, the newsgroups have become a wasteland. Literally.

All the action is in Yahoo groups, or the various radio forums like
Strong Signals, and Radio Reference.

Pricey, but a great scanner, BTW.

Dan

Here is a ï¿½reprintï¿½ of a previous post about Dressler active VHF/UHF antennas. Save your money and build or buy something else!
Mike

The Dressler VHF/UHF active antennas are far from impressive, especially for the price. I borrowed two of the active VHF/UHF Dresslers from the local rep (forget the model but went to 2GHz and was not the high IP3 version) and tested them on a antenna range against a Radio Shack Discone. The source antenna was a commercial 50MHz to 1GHz log periodic. I donï¿½t have the results handy but above the mid VHF range the Dressler did a little better than the Discone but not by much, the best performance was about 5 or 6dB at 1ghz if I remember correctly, which was my upper test limit at the time. Oddly, the Discone worked about the same on VHF high band and much better in the VHF air band. What was more surprising was the Discone was better from 50MHz to 100MHz than the Dressler even though the Discone was below itï¿½s natural cut off freq of around 100MHz. I thought something was wrong with the Dressler but both units gave the same results and the Dressler gain control was all the way up in both cases. The rep confirmed they were both working properly when returned also. Without opening the Dressler, we could only conclude the ï¿½antennaï¿½ element inside was a poor design and the internal pre-amp can only do so much with what its fed. Much better performance could be had starting with a Dressler and feeding it with a Dressler or similar pre-amp, which the local rep uses himself (whatï¿½s up with that?). If you hear of a good report from a Dressler owner, itï¿½s probably because they have to justify the
high price they paid for the thing.

3143. Re: Software Development Questions

Newsgroup: rec.radio.scanner
Date: 2005-08-04 07:00:14 UTC
From: Dave <SRPro@nospam.com>
Message-ID: <n7d3f1hf0rdlcvettd7eus3t01mljl07ft@4ax.com>
Source record: 12605
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

If you'd like to send an email instead of post it here then
you can send to

S-R-P-R-O-@-D-A-V-E-E-.-C-O-M (without the dashes). The
address in the header is a nospam (fake) address as you can
see.

Thanks to all who can help answer this survey. I usually get
lots of suggestions after the fact, from users who are
trying the software for the first time. But I really am
trying to get the features written down that are important
to people BEFORE I have finished the project, not after. I
already have several hundred letters to sift through, but
today things might be different than when these letters were
first sent to me years ago. So I am trying to ask about a
couple of features that are not easy to write in the code
and I want to see if they are worth the trouble. In
particular, the splitting of stereo into two files is one of
them and the review/playback last n minuets on demand is the
other feature I'm most concerned about.

I realize that there's other software that does the same
thing as mine. I don't think the market for audio recorders
that have special capabilities is saturated yet. I'm still
seeing hundreds of downloads per day. I had 2803 downloads
of the free version of Scanrec last month. And that's after
leaving the recorder to rot in the wind for several years.
This thing's been available and unchanging for many years
and there's still demand for it. So if there's still that
much traffic there must be some room for a better version
that has more features. And since people pay for Recall with
its list of features, surely someone will want something
that has more features than Recall has. Frankly I haven't
looked at Recall in a long time. I bought a license a few
years ago. So it might already have everything I mentioned
in my survey.

Anyway, I'm hoping people WILL answer the questions and help
me to get the impression on whether the features I mentioned
are needed or just a waste of time. I need to know before I
start doing that extra work, not after I start publishing
the beta version.

thanks,
Dave

I DIDN'T say that, Cyrus. I said it's, by my understanding,
illegal to DISCLOSE the content of two-way communications to
others, not to listen to them.

Maybe you should get a dictionary. Or find an adult to help
you with the big words.

the 2 scanners i have are a pro-2050 and a pro-2026

i did get some info.....but still curious if the output wire off of the #9 pin gets a 4.7-uF capacitor on it? this if for the pro-2050.

if anyone has a finished product pic of the internal setup, it would be great

That's EXACTLY what the law I quoted above says, very explicitly:
you MAY monitor these transmissions but you may NOT disclose the
contents to any other person. If you can't understand the very
plain language above, perhaps your babysitter can help.

> Really, for the love of God, I hope you're not studying law if you are

18 USC ss 2510-2522

Sec. 2511. Interception and disclosure of wire, oral, or electronic communications prohibited

(1) Except as otherwise specifically provided in this chapter any person who--

(a) intentionally intercepts, endeavors to intercept, or procures any other person to intercept or endeavor to intercept, any wire, oral, or electronic communication;

(b) intentionally uses, endeavors to use, or procures any other person to use or endeavor to use any electronic, mechanical, or other device to intercept any oral communication when--

(i) such device is affixed to, or otherwise transmits a signal through, a wire, cable, or other like connection used in wire communication; or

(ii) such device transmits communications by radio, or interferes with the transmission of such communication; or

(iii) such person knows, or has reason to know, that such device or any component thereof has been sent through the mail or transported in interstate or foreign commerce; or

(iv) such use or endeavor to use (A) takes place on the premises of any business or other commercial establishment the operations of which affect interstate or foreign commerce; or (B) obtains or is for the purpose of obtaining information relating to the operations of any business or other commercial establishment the operations of which affect interstate or foreign commerce; or

(v) such person acts in the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States;

(c) intentionally discloses, or endeavors to disclose, to any other person the contents of any wire, oral, or electronic communication, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this subsection;

(d) intentionally uses, or endeavors to use, the contents of any wire, oral, or electronic communication, knowing or having reason to know that the information was obtained through the interception of a

wire, oral, or electronic communication in violation of this subsection; or

(e)(i) intentionally discloses, or endeavors to disclose, to any other person the contents of any wire, oral, or electronic communication, intercepted by means authorized by sections 2511(2)(A)(ii), 2511(b)-(c), 2511(e), 2516, and 2518 of this subchapter, (ii) knowing or having reason to know that the information was obtained through the interception of such a communication in connection with a criminal investigation, (iii) having obtained or received the information in connection with a criminal investigation, and (iv) with intent to improperly obstruct, impede, or interfere with a duly authorized criminal investigation, shall be punished as provided in subsection (4) or shall be subject to suit as provided in subsection (5).

That's only ONE of the actions which constitute "personal gain".
There are others.

Stand by - it may become such. See my penultimate paragraph below.

>>Please note that police transmissions are NOT "broadcasts to
>>the public" but are rather two-way communications. Unless the
>>law has changed drastically since my youth, it is in fact, in
>>the US, illegal to disclose the content of monitored transmissions

>monitor two-way radio conversations. Police departments themselves
>have long given the public not only the frequencies they use for
>communication, but the accompanying "10 code" sheets that explain what
>the various 10-XX codes are.

You are the one who is confused - you are missing the point very
widely and giving people bad information.

The (Federal) Communications Act (47 U.S.C. s. 605) is very clear on
this point - contents of monitored transmissions (except AM/FM/TV
broadcast, aviation and marine traffic, and amateur and CB radio
communications) MAY NOT BE DIVULGED to anyone except to the sender
or recipient without permission of the sender or to another
communications carrier or pursuant to a court order. Period. No
wiggle room.

Do not confuse this with the provisions of the above section which
deal with "using for gain" or with the provisions of the Electronic
Communications Privacy Act (18 U.S.C. s. 2511) which allow the mere
monitoring of such communications as long as they are not encrypted
for security.

In the case of police transmissions being quoted by the press, the
former has given the latter such permission.

That's the way the law is today.

We pros in the field are quietly shuddering at the possibility that
it may become a lot stricter in regard to who may monitor non-broadcast,
non-marine/aviation, non-amateur/CB radio transmissions in the name
of "domestic security" as most foreign countries do, democratic or
not. One does not wander around a railyard today with a camera and
scanner without prior permission if one is smart...

Yes, I am a lawyer and this is the specific area of expertise of my
law practice. Further questions?

I'll say it again - read Section 605. It's clear that what you have
stated is NOT accurate. Violations of that section can be
prosecuted administratively (civil forfeiture/fine) by the FCC or
criminally by the Justice Department.

Civil forfeitures was what I did at the FCC before I retired.

Ok, It would be nice to have it record in mp3 format, and be able to set the bit rate of the file, a time stamp and freq stamp would be nice to have..... And having it put the recordings into folders of your choosing would be extra nice... The time stamp and freq stamp could be put into the id3 tags, so there is already a place in the mp3 file to put it...

Having it compile a microsoft database for you would be a bit arduous to program, but would certainly be a nice feature, hit counters, and of course, putting the tones info into the mp3 tag would be super, etc. writing such a program under vb6 , or net if you are into it, would probably involve writing a series of activeX controls, then using them to control and 3extract the data for these various functions. development will be faster, and the program will be easier to maintain in the long run, since the functions will be "encapsulated" in the activeX controls....
For the database and logging functions , a good class module would undoubtedly do, nothing more will be needed, as we are not looking for "real-time" display of these functions anyway..

the system clock, of course, can be tapped for the time/date info , and quite easily.

I wish I had time to write some of this stuff for you, but with all the projects i currently have on the fire, it's simply too demanding of time and resources. Maybe when winter sets in again....

The light is really not orange. It is a simple grain of wheat bulb with a orange insert over it in a white diffuser set about an inch or so from the LCD display.

I replaced a bulb in a PRO-2052 (same form factor as the 2050) with yellow two LED's and a resistor.

I forget the voltage , but that is easy to measure and take it from there.

For someone handy, figure it would take about 15 minutes at most. Someone who is nto as apt, might take a bit longer.

Or you could jsut go to the radioshack website, get the detailed parts list for the radio, and order the bulb to your house.

Patrick AFB Area Log - Thurs 4 Aug 2005
==========

MAKO 11: F-16C/D, Homestead ARB 482FW
9:59am: Working at Avon Park Bombing Range.
[292.2, 285.725, 138.125, 307.1, 281.5]

CG AUX VESSEL 7512
10:00am: Comms with CG Sta Port Canaveral; under Pineda Bridge on
Indian River, patrolling; heading north.
[157.175]

BOLT 41: KC-135R, MacDill AFB 6AMW
10:01am: Air-air Refueling training with LIFTER 31.
[327.6]

LIFTER 31: C-17A, Charleston AFB 437AW
10:01am: Air-air Refueling training with BOLT 41.
1:00pm: Pattern work at Patrick AFB.
[327.6, 135.075, 132.65, 133.75]

SHARK 21: F-16, flight of 3, Homestead ARB 482FW
10:38am: Working at Avon Park Bombing Range, Placid MOA, buddy-lasing.
[292.2, 307.1, 285.725, 139.8]

MUSTANG 01: CE-208B Caravan, US State Dept Air Wing, Patrick AFB.
10:39am: Touch-and-goes at Patrick.
[133.75]

JOSA 315: C-21A #84-0076
10:45am: Inbound MacDill AFB; no DVs or Duty pax aboard.
[372.2]

220: INS-Orlando Dispatcher
11:08am: Checks with INS-Deer Park Radio Maintenance.
[165.85]

LIMA FOXTROT 69: P-3C, Jacksonville NAS VP-16 "War Eagles"
11:33am: Area transition.
[133.475]

JOLLY 11: HH-60G Pave Hawk Helo, Patrick AFB 920RQW 301RQS
11:55am: Departs Patrick; local ops.
[269.375]

KIMG 55: HC-130P #64-14855, Patrick AFB AFSOC 920RQW 39RQS
12:35pm: Departs Patrick.
[133.75]

SATCOM
12:30pm: Clear voice, Spanish.
[253.65]

LIMA LIMA 66: P-3C, Jacksonville NAS VP-30 "Pro's Nest"
3:57pm: Working in Whiskey Area.
[267.5 Sealord]

GITMO 02: UC-12B, Guantanamo Bay
5:09pm: Inbound Jacksonville NAS.
[310.2]

KING 77: WC-130H #65-0977, Keesler AFB 403W 53WRS "Hurricane Hunters"
9:16pm: Parrot check with Oakgrove on AICC while overhead Patrick.
10:06pm: Deploying pyrotechnics offshore Patrick (115 radial, 40DME,
20DME) at 5500 feet.
10:45pm: Lands Patrick.
[133.75, 132.65, 133.475, 132.25, 364.2]
NOTE: Evidentally, USCG Sta Canaveral was not advised of this work; and
they have been announcing "flares spotted offshore."

DOS 671: UH-1H #73-21671, US State Dept Air Wing, Patrick AFB
9:20pm: Local ops.
10:15pm: Lands Patrick.
[133.75]

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring

How would the recorder decide what folder to put a file
into? Every recorder already puts files into a folder of the
user's choosing. So you must mean that the program knows how
to decide which folder? Please explain.

>Having it compile a microsoft database for you would be a bit arduous to
>program, but would certainly be a nice feature

You mean similar to Scancat? Do you mean that you want the
recorder to use the database in a random access way keyed by
the frequency so that statistics can be tallied in the DB
for each freq that was recorded?

>putting the tones info into the mp3 tag would be super,

What tones are you talking about? Detecting tones such as
DTMF? Tone detection can be done but it has to be designed
with the types of tone in mind. One frequency tone detection
would not work with DTMF. And how would tone info be stored?
As a frequency?

Thanks for answering. So far, you and only one other person
have provided any help.

People avoid surveys like the plague. But how else can they
get what they want in a new product? If it's already
completed before the ideas come in, then the ideas are less
likely to be added (afterward) unless it happens to be
something easy to retrofit. Some of the things I'm asking
for opinions on are not trivial to add later. That's why I'm
asking people up front before it becomes too late to make
modifications of that caliber.

If more people could help that would be great. Here's a
survey page I just added today.

I've been using your program for some time. Here are my suggestions:

1) Multichannel with individual squelch would sure work for me, and quite frankly it would be the only way to get me to pay for the software. I'm sure there is a pro-audio multitrack file format.

2) Some sort of periodic auto-save function is needed. I often record in the field and don't always catch the notebook battery meter indicating a low function.

Note that I always record in PCM and then convert to compressed audio later. This has a few advantages. One, I can "normalize" the audio in soundforge prior to compressing it. If you adjust the audio level of a compressed file, I believe it gets compressed twice. Second, I I can take individual bits of audio and boost the level of just that section. Audio levels are all over the map if you record military air. Third, the filters work better on PCM. Often I need to notch 400hz and 1200Hz from aircraft generators.

Now this leads to another feature:

3) Dump the auto-clip scheme. Sixteen bits of audio is plenty of headroom. Encourage the user to leave a bit of headroom when recording. Then for each segment of audio, normalize it. This will adjust for variations in audio level from radio to radio. This implies you will need a buffer for the audio segment, and the ability to simultaneously normalize one segment of audio while still recording the next segment.

Here is an idea for another product. These flash recorders (Iriver, Creative, etc) are getting quite cheap, but they still haven't mastered the idea of a vox. A program that would take a file from a flash recorder and strip out the silence would be useful.

Ultimately, the audio recorder belong in the scanner itself. The manufacturers are idiots for not doing so. It would have the advantage that the audio segment could be tagged with frequency, time, talk group,etc.You could scan multiple frequencies and then reassemble all the audio segments using the tags. Uniden and GRE just can't think out of the box. For P25, you could just store the digital audio.

I think these ideas are some of the best I've heard so far.
Especially the auto-normalize. That seems so useful and
after all these years, I never though of that one and no one
else has suggested that.

Would auto-save to a new file name (say, using a sequence
number) be acceptable instead of re-opening the previously
written file?

A .wav or .mp3 file has to be closed before it's considered
to be safely stored. That means that it cannot be appended
to without a lot of potential problems. If the format is raw
data with no headers (like the .RAW format used by Sound
forge) then it would be easy to append after closing the
file. Maybe I should consider adding a .RAW format for that
reason.

But IMHO, it's not safe to update the headers (which is
necessary to append more audio) of the .WAV or .MP3 file
that's already been closed because the computer could die in
the middle of the update and that might leave the file
crippled. Manipulating the previously saved headers can
invite other problems too, such as adding a lot of disk
seeking and CPU time to reopen the file for appending after
it's already been closed. Appending more audio requires a
read-scan of the entire file in order to locate and change
the existing audio (RIFF) headers.

If you're talking about the Scanner Recorder anti-clip, that
has to do with preventing the audio from being clipped off
at the beginning the way a mechanical VOX recorder does.
That works by keeping the last 10 MS of audio in a buffer
and drawing from that buffer whenever the VOX is opened to
prevent that pop sound. Like if it records a person saying
the word "testing" and it ends up sounding like "esting".

Sound Forge can do that using Auto-Region I think.

OK, everybody, I finally realized what's going on.

NOBODY is as stupid as this "Cyrus" pretends to be; even
a grade-school kid could understand the difference between
listening to communications (legal) and disclosing the
content to others (illegal) after having it pointed out
so many times. The only conclusion, then, is that "Cyrus" is
trolling and just PRETENDING to be this stupid and clueless.

Nothing else makes sense.

Good one, "Cyrus."

I think of clipping as in reaching the maximum audio level, not clipping off a bit of sound. However, I can see why someone would think that way. I could have sworn the audio sounded more distorted with the clipping turned on, but it could be I was doing something else wrong at the time.

Since I don't know the details in file format, I obviously have to leave autosave up to you.However, the notion of RAW sounds good to me. Even notebook HDs are big enough not to need compression for the local file. I only compress for internet use.

Another idea might be an intentional user definable :"snip" at the end of each segment of audio. Some scanners have an annoying squelch tail that would sound better snipped off.

Lastly, perhaps the scanner recorder could be set up to either process "live" audio or audio files. This way someone could record audio with the Irver or Create Nuvo, then remove the gaps later. I've recorded audio in locations where it really isn't all that handy to bring a notebook computer.

These were done with the scanner recorder and a notebook computer.
http://www.lazygranch.com/red_audio.htm

This is a typical file with all the warts of mil air in field recording:
http://www.lazygranch.com/sound/redflag/aug2004/24pm308p6mp3.wav
Everything is simplex with constant changing distances. With AM, weak signals really sound bad, so MP3 recording before processing just doesn't work. The newer files I've done have been encoded in ADPCM. Not all that dense, but much better quality.

http://www.lazygranch.com/sound/janet/tower_control_civ_07212005.wav

Here the planes on the ground are very wek since I don't have line of sight. The audio would sound quite poor in mp3, but is passable in ADPCM.

You don't consider the PRO-96 a "real radio"? I'd be interested in your reasons why. I've owned Unidens, and Radio Shack's (GRE) scanners. I currently own the PRO-96, and the PRO-2096, and find they both work extremely well, including the digital function while monitoring MPSCS in Michigan. What problems have you had?

It's my fault for not providing much help to people on what
it is. Funny thing is that when I put a switch in to turn
the anti-clip off, I couldn't tell the difference in how it
sounded. No moving parts responds real quickly. I never
needed it in the first place.

Will add that to the list.

A utility tool maybe to do that. It's just that I'm not sure
how to implement it yet. It currently uses "push" logic to
push the audio downstream from the capture to the file.
Processing a file is reversed. It's "pull" logic. It might
be too confusing for me to put both together in one program
just yet.

You have a great web site. I really enjoyed exploring. Will be going back there to check out more things. I found the plane wreck expeditions very interesting and wish I were able to accomplish that kind of expedition. It must've been great fun to go to those sites! It reminds me - a couple of years ago a friend who I met at the RC flying field (Morgan Hill) had a hanger full of plane parts and other junk. Up on the top level inside the hanger was a full sized, wreck of a WW2 spitfire with the tail numbers on it. I went on the internet and found lots of pics of that plane and made contact with someone in the UK who had a database of many planes and their dispositions. He had that plane in his list as "missing" and I was happy to tell him that I found his missing plane in the Morgan Hill area south of San Jose. He was real happy to be able to update his listing. It was a fatal crash of a pilot flying it between air-shows. He was enroute to somewhere in Nevada and had a full speed cruising impact into a hill due to poor vis. The entire (or most of it) plane was in the hanger and it was really messed up badly.

BTW: You have my email from the Scanrec about page. Feel free to email any time if you want to talk about it more.

Anyway, thanks a lot for all the ideas. I appreciate it!!

I just bought a PRO-2033 and would like to hear 460.300 and what's listed as the 'talk-around'. I am completely ignorant and trying to get a grasp on this stuff. My Dad was a chief of police (passed away in 2000) and I've got tons of cops in the family but hate to admit I never paid attention and ask one of them ;)

When I hit the scan button, the digital readout just runs 1 through 10 and flashes all zeros every time. If I turn the squelch down, it stops, but it's just static. So it appears auto scanning doesn't even pick anything up at all. Is it my location or my reception?

When I try to manually enter the frequency, it gives me an error every time or simply nothing.

Do you think I am a) doing it wrong. b) the scanner itself doesn't function properly or c) my antenna isn't working?

Is it also possible that the previous owner locked out lots of frequencies? I think the only way to unlock one is to enter the exact number first.

Any guidance for a complete new person who is seriously interested in doing this?

TIA,

Mary

Mary, a good first step would be to check the manual for that
radio (Radio Shack has many available online if you don't have
it) and perform a "reset." That will get you back to the shape
the radio was in when it came out of the box. Then follow the
manual for entering a new frequency. If the radio is working
properly, that ought to get you started. If it DOESN'T work,
your radio may not be working right. Oh--you DO have an
antenna of some kind hooked to it?

Actually, that was the first thing I looked for - they have instructions & help but no actual manual for this model (at least not at radio shack's site). Just very, very basic instructions. I'll look again though and see if there isn't one posted elsewhere.

I'm the type that reads manuals from cover to cover and enjoy pointing out every little feature that people who 'know' how to work things never realized existed because they don't read them.

Thanks!

This is how you do it:

(From the info on the 2033 (There is no manual online!)

STORING FREQUENCIES INTO CHANNELS

You can store a frequency into each of the scanner's 10 channels. Good references for active frequencies are Radio Shack's "Police Call Guide Including Fire and Emergency Services," "Maritime Frequency Directory," and "Aeronautical Frequency Directory." We update these directories every year so be sure to get a current copy.

1. Press MANUAL. Enter the channel number you want to store a frequency in.

2. Press PROGRAM. 000.000 flashes on the display.

3. Enter the desired frequency. (example 460.300, remember the decimal point!)

4. Press E (enter) to store the frequency. The stored frequency flashes
on the display.

If you made a mistake in Step 3, ERROR appears on the display. Press */ CLEAR and repeat Steps 3-4.

5. Repeat Steps 1-4 to program more channels.

If you want to program the next channel in order, repeat Steps 2-

Very helpful :(

Mary you can try initalizing the scanner by doing the following:

INITIALIZING THE SCANNER

If the scanner's display locks up or does not work properly after you
connect to power, follow these steps to initialize the scanner.

Caution: This procedure clears all information in the scanner's memory.
Initialize the scanner only when you are sure the scanner is not
working properly.

1. Turn off your scanner by turning VOLUME toward OFF until it clicks.

2. Press and hold 2, 9, and */CLEAR, then turn VOLUME toward MAX to turn
on the scanner.

Which came of Radio Shacks web site, They don't have the manual there as
you said but there is some info about features etc and this was in the
installation section :)

Hoep it helps a bit :)

I tried all the suggestions here, including resetting the unit, but with no good results. I removed the antenna while it was on and there was no difference whatsoever in what I was hearing. Here is a description of the antenna that came with it:

30 to 512MHz. Extends to 40". (Use plug adapter #278-117 for scanners that have BNC connector.)

So how do I know if it has a BNC connector? Maybe the antenna needs an adapter? Could this be the case, even though I do get the 'wx' broadcasts?

All new stuff to me - I feel like other people do when I talk about software :) In too deep.

Thanks for the hand!!

OK - I feel like such a geek. I'm sitting her past midnight with a grin on
my face because I finally figured out what my problem was!! It was scanning
1 through 10 and flashing zeros because *I didn't know it was only scanning
the programmed frequencies*. Of which there were none yet! I thought scan
would scan through all available frequencies not just ones I specified.
Anyone know if there is a way to scan that way, too?

Gees - thanks for all the help. I'm off to bed!

Mary

Hey HotShot...Does there always have to be an ignorant, arrogant bastard in every newsgroup? If you don't have anything good or useful to communicate, just shutdahell up and let the willing participants carry on business. Although your point is valid, your maturity level needs upgrading. Stop watching that Beevus and Butthead crap on TV...It's rubbing off on you. Thanks.

depends on the systems sometimes the reply is heard on the same
frequency, other times its on the same "virtual channel" but different
frequency. a "virtual channel" can pop up on any available frequency.

Silent Key Auction for Herb Petereit, W0AFY. If you knew Herb, you knew that he was one of the "old timers". One of his first jobs after moving to Omaha, Nebraska, in the 60's was building Galaxy V's at World Radio. He knew his gear inside and out, knew how everything worked, and took a lot of pride in keeping everything running in top shape. For many HAMS in the Omaha area in the 70's and 80's, Herb was the guy to go to when you needed help.

Herb passed away on Veteran's Day, November 11th, 2003, after a severe bout of pneumonia. He was 71 years old.

This auction is for a Uniden BCT2 Bear Tracker Bearcat Police Scanner. As far as I know it is in good working condition.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5796213575

Please be sure to check out the auction listings for other items from my dad's shack. Thanks!

Does anyone know any good online aviation scanners?

Specifically, I'm looking for anything in the El Dorado County area of Northern California.

I'm looking into buying a handheld, but I'm not there yet, and I'm interested in the traffic chatter of the Placerville Airport behind my house. I'm a pilot in training as well.

Thanks,

Dave

NASA weather observations acft flown
==========

It is Tues, 1:30am EDT (0530z).
Preparations are underway for the arrival and landing of STS-114.
After providing weather observations from over the Cape, Kent
Rominger has landed T-38N "NASA 913." Next acft up will probably be
one of the STAs, most likely "NASA 945."
Comms between Rominger and the ground were heard on 126.65. He noted
no significant weather in the area immediate to the Shuttle Landing
Facility, only extremely thin cirrus. Traveling further away he
reported a thunderstorm and some other activity that he said bears
watching. He was up at 42,000 feet and should have been heard by
monitors at great distance from the Cape.

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring

Source record: 12559

More acft working over the Shuttle Landing Facility
==========

It is Tues, 2:26am EDT.
As I anticipated in my previous posting, STA acft "NASA 945" was the
next plane to take off after T-38N NASA 913 landed. NASA 945 is now
over the Shuttle Landing Facility and is reporting weather conditions
and landing/lighting conditions in anticipation of STS-114 Orbiter
Discovery's arrival and landing at KSC.
NASA 945 is up on 126.65 with Tower and on 264.8 with Cape Control.
NASA UN-1N Helo "Search 01" has just departed Patrick AFB and is
heading into the Cape area. He is up on 133.8 with Cape Control.

Yes, there is ignorant, arrogant bastards in every newsgroup. Get used to it.

There's also a bunch of dumbasses that don't know how to use a search engine either to look for this stuff first. Chances are if you took the time to do so, you'd probably find them on the most popular website for frequencies. Which I won't post, because most people who do know how to use a search engine will already know what it is and it isn't cityfreq.com either

And I don't watch beevus and butthead. I'm better than that. I watch South Park.

Now shut the hell up.

This scanner works fine in that range. The Signal Stalker will find active frequencies in your area when you have it turned on, and it will alert you as it does. Personally, I've found the SS capability to be limited to around 1/4-1/2 mile range in my area; admittedly, I live in an area that is low compared to most of my surroundings, topographically speaking.

It will work fine for that. If you turn it on it checks for close calls,
range depends on terrain, every couple seconds, and locks on to them if it
finds one. They are nice in that they are so small, makes them easier to
carry.

Although I have not used the still popular PRO-43, my PRO-97 works pretty
well on 225-400, plus you have alpha numeric capability.

Also if you plan to go to some air shows, and that particular base uses the
400Mhz trunked system, you have an all in one radio...almost

How does it perform on the VHF MilAir?

Thanks,
Bill Crocker

Sorry to burst your bubble but you don't have to pay for radio
reference. You don't even need to register if you want to check out the
database. Seeing as you're a cheap ass. You don't even have to dig into
your pockets for your pennies with the funny face on the front.

Clean those glasses off or get off the whiskey. Your starting to make
not any sense.

kapeeshhhh

So every time I go there and try to do anything and they put the PayPal
give us money if you want to see that bull shit, it's just my glass need
cleaning?? Well then heck I'll clean them and try again... Op's PayPal
give us money for them radio frequ's in your area.. D'oh cleanning the
glass didn't help... And I'm never going to sign up for PayRip

http://www.paypaksucks.com

http://mysite.verizon.net/moment_1/paypal.htm

I could put 10,000 URL's about PayRip up there, but 2 will do!!

3229. Icom IC-R20 Opinions

Newsgroup: rec.radio.scanner
Date: 2005-08-13 12:40:37 UTC
From: DougSlug <dougslug@hotmail.com>
Message-ID: <8TILe.16600$6%2.1107@fe10.lga>
Source record: 12591
Cross-posted to: rec.radio.scanner,alt.radio.scanner

How does the Icom IC-R20 stack up against similar wide receive/all-mode analog receivers like the Yaesu VR-500 or AOR AR-8200MkIII in terms of performance (particularly HF), scan speed, overall ease-of-use and quality? All opinions welcome!

Thanks,
Doug

3230. Icom IC-R20 with Opto Scout

Newsgroup: rec.radio.scanner
Date: 2005-08-13 12:42:56 UTC
From: DougSlug <dougslug@hotmail.com>
Message-ID: <jVlLe.16601$6%2.545@fe10.lga>
Source record: 12592

Considering the purchase of an IC-R20. I see that it has CI-V
capability...can the R20 be used for reaction tuning with the Opto Scout?
If so, is a cable readily available for that purpose?

Thanks,
Doug

3231. 911 And Scanners

Newsgroup: rec.radio.scanner
Date: 2005-08-13 13:13:49 UTC

Message-ID: <hmmLe.1380$A%3.201@newssvr33.news.prodigy.com>
Source record: 12593

Real 911 Calls, "BELIEVE" it or not!

Dispatcher: 9-1-1 What is your emergency?
Caller: I heard what sounded like gunshots coming from the brown house on the corner.
Dispatcher: Do you have an address?
Caller: No, I'm wearing a blouse and slacks, why?

Dispatcher: 9-1-1 What is your emergency?
Caller: Someone broke into my house and took a bite out of my ham and cheese sandwich.
Dispatcher: Excuse me?
Caller: I made a ham and cheese sandwich and left it on the kitchen table and when I came back from the bathroom, someone had taken a bite out of it.
Dispatcher: Was anything else taken?
Caller: No, but this has happened to me before and I'm sick and tired of it

Dispatcher: 9-1-1 Fire or emergency?
Caller: Fire, I guess.
Dispatcher: How can I help you sir?
! Caller I was wondering.....does the Fire Dept. put snow chains on their trucks?
Dispatcher: Yes sir, do you have an emergency?
Caller: Well, I've spent the last 4 hours trying to put these chains on my tires and... well.. do you think the Fire Dept. could come over and help me?
Dispatcher: Help you what?
Caller: Help me get these chains on my car!

! Dispatcher: 9-1-1 What is the nature of your emergency?
Caller: I'm trying to reach nine eleven but my phone doesn't have an eleven on it.
Dispatcher: This is nine eleven.
Caller: I thought you just said it was nine-one-one
Dispatcher: Yes, ma'am nine-one-one and nine-eleven are the same thing.
Caller: Honey, I may be old, but I'm not stupid.

Dispatcher: 9-1-1 What's the nature of your emergency?
Caller: My wife is pregnant and her contractions are only two minutes apart.
! Dispatcher: Is this her first child?
Caller: No, you idiot! This is her husband!

And the winner is.....

Dispatcher: 9-1-1
Caller: Yeah, I'm having trouble breathing. I'm all out of breath.
Darn....I think I'm going to pass out.
Dispatcher: Sir, where are you calling from?
Caller: I'm at a pay phone. North and Foster. Damn......
Dispatcher: Sir, an ambulance is on the way. Are you an asthmatic?
Caller: No
Dispatcher: What were you doing before you started having trouble
breathing?
Caller: Running from the Police

I see a lot of used ones for sale. It seems many people are selling them shortly after purchasing them! I think it's most likely a very good "communications receiver", but a big disappointment when used as a "scanner" Scanners are far superior features when it comes to scanning.

On Radio Reference a guy had one listed for around $375.00.

Bill, what types of features would you say "scanners" have over the R20?
And which models might you be referring to? I think I'm probably more
interested in the "communications receiver" type of performance, but I'd
like to understand some of the differences.

Doug,

AOR 8200 MKIII needs add on cards for CTCSS and Recording. The IC-R20 needs no silly add on cards and has DCS too.

Yaesu VR-500 has no CTCSS/DCS and recording. But is a few hundred cheaper.

I agonized between the VR-500, Alinco's DJX-2000 and the Icom R-20 for weeks before deciding on the ICOM R-20.
I have not been disappointed. Remember with portable HF monitoring, your antenna and atmospheric conditions will make or break your monitoring session.

One of the things he asked about was scan speed. Scan speed on the R20 is very slow. Ease of use? No Icom's I've seen are what you would classify, "easy to use".

Oh yea, and he said, "All opinions welcome!"

For your needs, you'll probably be content with the R20. But down the road, should you want to monitor trunked, or digital public safety, you'll be out of luck.

He asked how the ICOM R-20 stacked up against SIMILAR WIDE RECEIVE/ALL MODE ANALOG RECEIVERS.
You told him "scanners are far more superior features when it comes to scanning". I asked what scanner covers HF with USB and LSB. I guess all opinions are welcome as long as they are yours. BTW, I find the ICOM very easy to use.

Thanks for the all the feedback. Please don't argue...I did say "all opinions welcome"...

Bill, I had considered the possibility of needing trunking and digital...what models would you recommended for those requirements? I once owned a PRO-95 and played around with the NJ State Police trunked system...it worked OK for that (I guess; I had nothing to compare to), but overall I didn't really like the PRO-95. I think it was just culture clash, though--I was used to Yaesu and AOR receivers, and I hated that there was no VFO type mode on the 95. I also prefer having TV and FM broadcast bands in the same receiver, which the 95 didn't have. I did think the audio was "hissy" on the PRO-95 even with otherwise full quieting signals. It looks like the BCD396T is the one to have for trunking and digital. Maybe I'll just have to get both!!

Source record: 12510

looks suspiciously like that guy a while back that also (allegedly)
sold one for the same amount. who would even bid that much on
scanners that are selling for between $80 - $100 on a regular basis
with a couple available right now on ebay ???

worse yet, why buy a " cellular " capable scanner with by
about a year and a half the FCC is killing analog cell service,
nation wide. ??? in 2007 the analog cellband is mandated to
go digital making those analog cell scanners useless !!!

"
AMPS, or Advanced Mobile Phone Service, analog cellular, is scheduled
to end in America in 2007. The Federal Communications Commission in
early August decided that cellular carriers would no longer be
required to keep open a few analog channels for the now small number
of non-digital phones. You can download the official F.C.C. document
by clicking here. AMPS audio sounded great, many will miss it, but it
took up too much bandwidth. Now we have digital wireless, bandwidth
friendly, feature laden, but often with poor audio because of over
compression. That's because the cellular carrier wants as many calls
over the air as possible, all scrunched together, with voice quality
now a small concern. AMPS, we will miss you.) "

(doncha wonder what " On Star " service is going to do with
ALL those analog units deployed in the field ?? ha h ah aha)

trippy ....

theres a scam around every corner , these days , and this
auction is a great example..

k..........

Hi,
Looking at / for a handheld scanner. I live in a relatively large metro area, near Augusta, GA. Several communities and I would like to just scan for the fun of it. I dont know what "trunking" is but a lot of the new scanners offer this capability, maybe all?

Question is, whats a good starter unit? Im not looking to eavesdrop on the CIA or IRS, just want to listen in on the local stuff. Dont want to spend a lot of money as this wont even really be a hobby. I just dont want to purchase old technology thats an obvious waste.

Any advice appreciated.

chaz

Look at the :

http://www.radioreference.com/index.php

Find the area you want to scan, make sure it's not digital. If it is Trunked of any kind you need a Trunk Tracking scanner. The low end models are Radio Shack Pro-97 and Uniden makes a couple. The Uniden BC246T would be my first choice. Cost is the same as the RS, and it includes a PC cable, and AC adapter. Not to mention it's a very small package, easy to carry around. If you can still find a Pro-95 that RS discontinued to make the 97 it will work great also. Little complicated to get one set up for Trunking, but there is lots of help on line to get you over the hump.

Ok I'm FAR from any kind of expert at this, but it looks to me like there is no digital yet. There does seem to be a LOT of trunked stuff to choose from. These names don't mean anything to me as I don't live there but look at this page:
http://www.radioreference.com/modules.php?name=TRSDB&sid=429

There is a lot of Motorola Trunked stuff there. Are any of these communities near you? If so you want a trunking scanner. Looks like there is some standard stuff you could pick up with any scanner, but the majority seems to be Trunked. A cheap new scanner that does not Trunk Track is about $100.00. A very good, Trunk Tracking scanner is about $200.00 new. So I would recommend getting the 246T. Looks like there will be a hell of a lot of stuff to listen to there.
If you decide to get one, join the Radio Reference page it's free, and if you like what they have, as you should, send them a few bucks to show it. A 10$ donation to them is appreciated, and if you buy a book at a place like RS they are twice that and the RR forum will give you much better info. If you decide to buy a scanner, there's LOTS of help getting it going. They are a lot of fun. I started with one at one job as a necessity. Soon I found myself listening at home to for fun.

Krakula , hey man wazzzzzz up ? Tom in Maine,USA ....you got any decoders or any addons left from your 2006/Opto days? (or the scanner themselves too)

I'm setup here with one - FULL with Probe 7.0 , nice scanning with all the conventional we have.....always looking for the above.....later my friend.

Hello, I have a brand new in the box Uniden BC796D. It was taken out once and played with for less than 1 hour when I first got it, then went right back in the box. I know it is a really top-notch scanner, but i've lost interest for the hobby. I did not pay for it myself, but I was told it was bought @ around $600. I would like $350 plus half of shipping. Thanks

haaaaaaaaaaay doooooooooooode .....

whatz happ'in ????? ahahah a aha ah

ditched all my sw and vhf/micro gear and I'm " deep " into freqs
below 1600hz now. (where RF propagation and static ceases)
those and especially below 12 hz and geomagnetic natural (maybe ??
ah aha) waves. I have discovered little known or completely
unknown magnetic waves that exist mostly in the nearly
Sierra mountains and related areas. these are probably like the study
done here.....

http://72.14.207.104/search?q=cache:-2_wUSAtYCgJ:www.vogelstudy.org/Archive/01070001.pdf+strong+natural++magnetic+waveforms++&hl=en
(which he concludes are manmade in nature ..... oh this neieve
person..... doesn't suspect where they are coming from at all h
ahahah)

but this guy in , this study , doesn't realize that these waves are
" all over " the place and come in enormously different strengths and
have unique identities. if you drive around looking for them mobile,
instead of sitting in one place waiting for them, you find " tons " of
them ..... all over.
I'm using the newly available " resonant " frerro magnetic mega
cores as the basis of my home made instruments ......
equipment similar to stuff on this site ....
rods ......
http://www.stormwise.com/superlow.htm
circuits ......
http://www.stormwise.com/vlf1574projects.htm

I'm making equipment similar to their circuits except more elaborate and sensitive. my main instrument is a solid state switched " charged pump " , up converting , ULF / SLF receiving front end that has about 2 miles of wire wound on the ferro resonant ferrite rod. it uses , selectable , one or two stage dc coupled preamp coil and and works sub 1 hz to about 300 hz. works into the a.m. or f.m. radio on your car for the i.f. . I have several others for different, slightly higher , hz ranges too. I'm going to show people how to make a wave " finder " , using commonly available, inexpensive modified (gauss master) equipment. all for under $80 to get started.

I'm working on a web site describing these waves, will have examples in .wav format , to listen to , and compare against , and will provide technical information to quantify / classify them and add to the site repository of wave info. it's pretty exciting and very interesting. the government has several new , super secret . toys that emit waves in those ranges and a wide array of wave signals are to be found with sources below the ground and , evidently, in near sub space. trippy stuff, I'll keep you posted. I think scanning is a " been there " , " done that " hobby ... one that is currently in a period of unfortunate decline. looks like there is a " whole " new frontier of scanning possibilities where " man " has yet dared to tread (frequency wise) . the government likes it so well , they are hiding quite a lot down there. like with other , pioneering level , equipment ..... this stuff is able to be detected and intercepted by the hobbyist .... so far. ah ah hah hahah he potential for signal discovery from " natural " resources is immense. might be a whole new "ball game " in the offing. (if the government doesn't put their foot on my neck for disclosing too much to civilians ah ahahah)

k.............

FYI: did you know that the US government employs several " sub contractor " companies to set up and maintain / monitor secret installations with professional level equipment (like my home made stuff) 24 / 7. this equipment listens to the freqs below 300 hz and monitors " active " particles too ..... with about 12 " known " installations (and very probably more) around the USA and possessions. the most well known installation, and massive being in the Rocky Mountains west of Boulder , Colo. little is known about what they are " listening " for ..... but it's very interesting , never the less.

Waters And Stanton

I purchased a scanner radio from this company and have had nothing but trouble with them since.
I first ordered a Icom R5 for £89.00p (used) I paid for this using my wife's debit card, it arrived on 3/8/05. I sent it back to them on the 4/8/05, they recieved it on the 5/8/05.
I requested the debit card be refunded with the £89.00p. I was assured via email from a "Nigel McAlpine" that, and I quote .....

> Web: www.wsplc.com
> E-mail: nigel.mcalpine@wsplc.com <mailto:nigel.mcalpine@wsplc.com>

I telephoned them on the Monday only to be told that the money was debited to my wifes card on the 3/8/05 ??????
I don't know how they managed this as I did not send the radio back untill the 4/8/05.
I was also charged for "next day delivery" it did not arrive, I phoned them and it had not even left the store, (another rip off) and lies.
Now it is the 16/8/05 and still the £89.00p has NOT been debited to my wife's debit card.
I emailed them today, but they do not have the decency to reply.
I shall give it till Wednesday and if I do not hear from them or have not received the £89.00p I shall pass the matter over to the Trading Standards Department.

I shall keep you posted about this rip-off company.

Never read so much rubbish. I have done business with Waters & Stanton numerous times with no trouble, and so have thousands of others. If *YOU* bought something and changed your mind then that's your problem. They don't offer a try before you buy service like catalogue shops.
Please don't keep us posted, no one is interested. If you had a case you wouldn't be shouting about it here. I think you have probably been told exactly what the returns policy is and have been unable to bully them into doing things *your* way. I hope they sue you.
Waters & Stanton is a perfectly reputable company, which is why they are well known. Moaning old people tend to be forgotten about, so give it a rest.
Please also check your newsreader settings as you have posted to a lot of groups, so I have replied to the ones you used. You will now be placed in the killfile where you belong.

Was the claim that it was "debited on 3/8/05" a misunderstanding - that would appear to be the day they would have debited your card for the sale, not credit for the refund. There may just be a misunderstanding so maybe check again that the boss knows there should be a *refund*, rather than just the original debit.

Good luck.

Ken

Suit yourself pal, just telling people that they are in no hurry to refund
your money, by the way, the returns policy is 7 days no quibble, although I
expect you know about that if you have been dealing with them for years, eh

I see you deleted the most important part, that is, the confirmation email from them stating that the money WAS being refunded.
I am not bullying them at all, I returned the scanner under the 7 day returns policy because it was "deaf" end of story. I now await my very long overdue refund, what's your problem.

I'd be checking with the bank as well. Unless they are different beasts in UK, they have been known to have sticky fingers and not pass on money as quickly as one would otherwise hope.

Hi Ken, yes, done that. they state that no transaction for a refund has been recieved by the bank.
Ah well, we shall give it a few more days.
It's ridiculous though as it takes them all this time, and yet about 3 months ago I had cause to return a faulty item to Maplins, they had no more in stock, offered me a refund and it was back in my bank in under 48 hours, so far it has taken W/S 13 days, and still nothing :-((
cheers

Lesson learned here....

ALWAYS use a regular CREDIT CARD for these transactions. Period.

Had you done that, either the refund process would have been easier, or, you could have directed your spam to the credit card company in the form of a dispute, instead of whining about it here.

Using copies of your e-mails from W & S, you would have had a SOLID credit dispute and the CC company would have to credit the amount and investigate the matter thoroughly on your behalf.

I assume the Fair Credit laws are similar in the UK to what we have here in the US.

Dan

[Snipped complaint and personal email]

Well, I have to speak as I find ..and in my recent dealings with W&S, they
have been excellent.

I purchased a used Yaesu VR500 from them after spending about 90 minutes
trying various other scanners, together with a micro mag mount and a gainer
rubber duck.

After a couple of days at home, it became apparent that I required some
additional functionality that was offered by one of the other models I
tried, together with another antenna, larger than the micro mag mount.

I returned the scanner, micro mag mount and gainer rubber duck and
exchanged the lot for a new Uniden Bearcat UBC3300XLT, together with desk
top dipole.

I got a full refund on everything I bought, without quibble against the
subsequent purchases.

The staff were helpful and courteous at all times...and I left the store
thinking "That's what I call service"!!

I would definitely recommend them to anyone and would not hesitate to use
them again!!

You are welcome to use tk2, the free, open source software
I wrote for the IC-R2. It works on Linux, Windows, MacOS X,
and other systems.

See http://parnass.com for screen shots, downloading,
and more info.

Next time - why not use the telephone - despite our advancing
technologies and the growth of internet purchasing, gripes, complaints
and problems are often better dealt with by actually SPEAKING with someone.

Hi. I live in a wooded park like neighborhood in suburban detroit mi. Birmingham to be exact. My neighbor gave me a huge live pine tree that is probabaly close to 100' feet tall, at least exactly double the high voltage wires on the power pole's height. I am in the top ten percent of trees height for many miles, but not eneugh to see the horizon. I am going to mount a scanner antenna and a tv antenna in this tree for my scanner and tv/fm use. Can anyone give me some reccomendations as to how to do this? Thanks, Bud

That's one of the trivial programming tasks these days. Designing the
database usually takes longer.

> but would certainly be a nice feature, hit counters, and of course,
>putting the tones info into the mp3 tag would be super, etc. writing such a
>program under vb6 , or net if you are into it

Please, no. Those of us who are forced to use Dot Not have to keep
the latest version loaded. Since MicroThought can't seem to make
their frameworks compatible with each other (I can no longer run
programs written under 1.x), that's just one more reason to listen to
Nancy Regan.

>crippled.

Same problem text editors have. You update a copy of the file,
deleting and renaming only after a successful update. (Which is why
Word leaves ~garbage.doc files around.)

> Manipulating the previously saved headers can
>invite other problems too, such as adding a lot of disk
>seeking and CPU time to reopen the file for appending after
>it's already been closed. Appending more audio requires a

>the existing audio (RIFF) headers.

My computer can do video decode at 150fps or better, while streaming
audio to the web. I don't think CPU power is something we have to
worry about with files or audio any longer.

Unlike Zombie Wolf, I don't have any pressing projects at the moment,
so if you'd like a collaborator, let me know. :)

Read the Distance Selling Regulations which cover transactions of this type.
They offer protection for purchasers including the facility to return goods
after they have been received.

G-Text wrote:

>
> I shall keep you posted about this rip-off company.

After 'experiences' with the competition, I have always used Waters and Stanton and have spent a lot of money with them over the years without a single problem. I have always found them to be polite, friendly and helpful.

Considering the high number of transactions that your bank, credit card company and W&S make each week, its inevitable that one or two of those transactions are going to go wrong now and again...its just one of those things.

However, your attitude is going to make a big difference in resolving the situation. Having a x-posting temper tantrum on usenet isn't the best way to deal with the situation and it isn't going to stop me buying stuff from W&S.

Have a little patience, discuss the problem with your bank and W&S in a polite and non-accusing manner, and I'm sure that before long you'll be happy to demonstrate your personal integrity by x-posting once again to tell us that W&S wasn't to blame after all.

I think you must be a company stooge, or arse licker, I have dealt with the company three times, once they got my order correct, the other two times were a disaster, a 33% success rate and you call that good ! wrong items arrived LATE, and refunds took an age to return to my account. I buy direct from the states now, far cheaper even with postage, and plenty of change over compared to the rip off Britain emporiums.

I have had numerous radios, scanners over the years and normally test them
on the Bristol Airport ATIS, all my previous scanners etc could receive this
on the supplied stock antenna, then on the base antenna, all the scanners
would obviously show a greater signal reading. This R5 could not pick it up
at all. and only just about pick it up on the base antenna (no, the att was
not on) I compared it straight away with my VR-500 on the same antenna, and
the vr500 showed full signal.
cheers

I can understand all the people who have had good dealings with W/S who have posted in in their defence, but if you had spent the past ten days being told one thing, and then another, promised this and promised that, spent ages on the phone day after day and still not getting anywhere, maybe you would think differently. I have dealt wth other companies obviously, (some good, some not so good) but have never had reason to actually post on the groups about it, the matter was always satisfactorily solved with a day or so. But these are beyond a joke, it is like banging your head against a brick wall.
It is a pity I live over 130 miles from the store, otherwise I would of been in and got it sorted by now.
I tell you though. I definately WOULD NOT recommend this company to anyone.
You are entitled to your opinions, then please allow me to be entitled to mine. If by my posting I have caused just one single customer to go elsewhere, and not have to go through what I have, then my posting has been worth it

This is for "ade" who states I am not entitled to any refund.....
Here is a copy from their website regarding the distance selling returns
policy.
quote.....
OTHER RETURNS - NO QUIBBLE & NO FUSS RETURNS POLICY

If you purchase products by mail order, you have the right to cancel the transaction for any reason and return the products within 7 days after delivery for a full refund (but not the original carriage charge). Products must be returned in as new condition together with all accessories, instructions and original manufacturers packaging. Failure to do so may incur a charge for replacing the missing or damaged items. In order to avoid administration delays, we urge you to first telephone us for a Returns Note number which should be clearly written on the outside of the parcel. We can arrange collection if required, but you will be charged for the carriage costs incurred by us.

end quote.....

The radio was returned by post in less than 2 hours of my receiving it.

No way is W+S a rip-off company. I have used them many times, ordering stuff over the Internet, and they are always very reliable and very efficient.

I'd use them again and again.

I was merely pointing out that I discovered the radio was faulty immediately upon receipt, I sent it back straight away by next day before noon delivery. My point is that they are adamant that they paid a refund back to my debit card on the 3/8/05. this is very strange as I did not receive the radio until the 4/8/05. and to this day, 17-August-2005, no refund as yet.

3306. ARC2 crack

Newsgroup: rec.radio.scanner
Date: 2005-08-16 19:05:01 UTC
From: Canonian <f@f.ff>
Message-ID: <ddtdcutea1@news1.zwoll1.ov.home.nl>
Source record: 12418

Hi,

I've downloaded the ARC2 softwarepackage with a keygen. It functions well:
after a new licensekey input, it says license ok.
Nevertheless, I am still not able to upload to the R2 scanner (download is
ok).

Does anybody has a better plug-n-play software package or crack?

The TK2 package is too open source for me. Too much to install, I do not
want all the tk2 develop environment.
The CS-R2 package is very basic (DOS) but functions well.
ICR2 is not functioning properly as well.

Please...

Barry

Hey Bob,

It must be a great software package, but I do not want all the development
environment on my PC.
Just the runtime version is ok for me. Is it possible to send me a runtime
version, without needing al the sourcecode and compiler engines?

For programs written in Tcl, the source *is* the runtime "version".
The Tcl interpreter, which you can download for Windows, runs the
source code. "all the development environment" can be as simple as
Notepad.

Well I use the Uniden BC780XLT there is no good freeware software out there and you need a RS232C M/F 9-Pin cable Do not get one from RadioShit or from ScannerMaster they want your right arm and your left nut. It's a NULL Modem cable you can get one at:

http://www.cablesforless.com/index.asp?PageAction=VIEWCATS&Category=431

for $3.99 and the good software is ARC780 at

http://www.butel.nl/

advantages you ask, well with ARC780 you can add any frequ you see on any web-site in the world with a simple cut and past. So you don't have to set for hours programing the radio by hand. You can record right to hard drive anything you hear going on. And the cost of the BC780XLT is reansonable, i.e. you can pick one up on eBay for about $250.00 I got my 3rd one there for $190.00 a few months ago. The BC780XLT and ARC780 are an excelent combo.

3313. 10-codes losing popularity

Newsgroup: rec.radio.scanner
Date: 2005-08-17 03:11:28 UTC
From: Paul Hirose <iszintjv55@earINVALIDthlink.net>
Message-ID: <AVxMe.6436$Wi6.2603@newsread2.news.pas.earthlink.net>
Source record: 12426

The wheel seems to be coming full circle: plain language is gaining
popularity over 10-codes in emergency communciations. The problem is
that too many local 10-code dialects have developed over the years.
They can cause misunderstandings when multiple agencies work together
in a major incident.

In my area of California the sheriff departments use 10-codes but the
fire departments don't. I have no idea how long this state of affairs
has prevailed, since I only got into the scanning hobby last summer.

3316. Dropouts when using "Close Call" feature

Newsgroup: rec.radio.scanner
Date: 2005-08-17 07:01:38 UTC
From: jacob <jake_alexander@msn.com>
Message-ID: <1124259299.257274.248700@g44g2000cwa.googlegroups.com>
Source record: 12430

Hi All,

I have a Uniden ubc72xlt. When I have the "Close Call" feature enabled in the background I get regular dropouts in the signal that I'm monitoring (every 3 or 4 seconds the signal is interrupted with a pulse of silence). As soon as I turn the "Close Call" feature off the dropouts dissapear. Just to make it extra clear: I'm not getting the dropouts in a signal which Close Call has locked onto, but just a normal signal that I'm monitoring, with Close Call in the background listening for signals. Is it normal for these scanners with Close Call to behave like this with the feature enabled, or is my scanner a dud in some way?

Cheers in advance,

Jake Simmonds.

Bad idea - you're forming a pretty good choke at anything above
VHF-lo. Use steel wire to wrap both the coax and the messenger wire
(that's what it's called - it's usually 14k stainless "aircraft"
cable) to each other.

>Suggestion for the climber: Assemble whole pipe and antenna on the ground,
>then when in position in tree, use rope to "haul" antenna and pipe up to
>your position. Start with pipe and antenna upside - down, and install first
>bolt , but not completely tight. then, climb a bit further up, and use rope
>to turn whole thing right side up by rotating on installed lag bolt. Install
>second lag bolt and tighten.

Good if there's enough room between foliage, otherwise haul it up
right-side-up.

One problem - it sounds as if the coax is going to have to be long
enough that, even with LMR600, it might not be better than an antenna
mounted lower but much closer.

Here is how you go about this task.

First, we need a support for the coax, especially if you have to run over 125 feet of it. this is usually done by running a cable from the tree to a post firmly embedded in the ground right next to your house. We then support the coax by whipping it around and around this cable, to take the strain off it. We literally wind the coax around the cable

next, if you can get someone to climb the tree, you should have them mount the antenna pipe to the tree, in the following manner:

1st method: drill a couple of holes thru the antenna pipe , one a foot or so from the bottom , another a foot from the top. 1/4 inch holes work well. Get some 3 or 3 1/2 inch, quarter inch lag bolts from the local hardware store. Screw these thru the antenna pipe into the tree trunk until tight. You probably should have the antenna on the pipe when you do this, and should hook the coax up also. A good strain relief for the coax at the bottom of the pipe would consist of a couple of regular mercy clamps, with rubber inserted under them between the coax and the clamp. This will take the pull from the coax . Do not over-tighten the clamps as this will tend to crush the coax too much and destroy its impedance and performance. Use good coax, like Belden 9913 for this, since losses in coax tend to be high at scanner frequencies if you dont use good stuff.

Suggestion for the climber: Assemble whole pipe and antenna on the ground, then when in position in tree, use rope to "haul" antenna and pipe up to your position. Start with pipe and antenna upside - down, and install first bolt , but not completely tight. then, climb a bit further up, and use rope to turn whole thing right side up by rotating on installed lag bolt. Install second lag bolt and tighten. Hook up coax, weatherproof connection, and install mercy clamps near bottom of pipe, with coax going thru them, and rubber in place. You are done. Come down and have beer, it has been a VERY good day in scanner land......

Here - before "our" 911 system came on board - the 10 codes tended to vary among Police units like people's choice of colors of homes. It could be very confusing. As to the Fire Services, the city - so far as I know, barely uses them if at all. Here in the rural area, there are a very few 10-codes used by the fire departments, but they coincide with those used by the police where appropriate. Therefore - less confusion for the 911 center. The Phonetic Alphabet still creates some confusion. IF a cop has a brain freeze and calls off a letter such as "F" as "funny" or "friday" the 911 center will call them on it. They stick to "a" form of the alphabet and that is it. I'm trying to think now - I don't think they use the same as say the Hams do.

there is a military phonetic alphabet...the one we use in the coast
guard and it's the same one used by hams. the coast guard is a
stickler to the point that we get called on it if we use 'oh' instead
of 'zero' in a number.

Haven't actually got it yet, when I see it in the bank account I shall be
happy then AND NOT BEFORE.
If you are prepared to let these companies walk all over you, that's fine,
I, on the other hand will not.
The likes of Maplins and Argos can manage to get money back into your
account in less than 48 hours (not 21 days) if they can do it, so can this
outfit.

This is normal behavior... The silence you here is when the scanner jumps
over and quickly scans the frequency range(s) you have selected in the
"close call" options... You will here this same thing if you were to turn
on the "Priority" scan as well...

3330. 396T Or 296D

Can anyone help me out? I have a pro-34 hendheld that works great until i power the unit off then I lose all my frequencies that I entered. I cannot locate a service manual for this model. I put new batteries in the unit but it wont retain any frequencies that i enter. If i leave the power on then the frequencies are retained. thanks in advance to anyone that can help me with this problem.

Read up about it here: http://www.starrsoft.com/freeware/win95/default.asp

Quote from the Win95 developers:

"There has been an item sold on eBay that claims to "unlock" the frequencies
in the PRO-92/2067, PRO-93/2053, and PRO-95. I have been informed that this
item is merely a set of 151 .P95 files (for use with my Win95 app).
Together, these files contain all of the frequencies in all of the "extra
ranges" as added by Win93 and Win95. One could create this data himself by
using a program like Microsoft Excel to fill columns with incremental
frequency data, then copy and paste to Win93 or Win95."

I am going to go and measure again, but assuming I measured wrong before, Is a 100 foot run too long for the antenna to work properly? I am probabaly going to use 300 ohm twin lead for the lead in, unless people think it should really be coax. See a picture of the proposed set up at http://community.webshots.com/photo/424625000/424626583NExHgY

The TV show "Cops" did a show years ago from
Broward(?) County Fla.,which is the Miami area.
It was Shocking...they were using Q-signals!
At first I thought I was imagining it,but the
dispatcher was saying things like QSL and QTH.
Really gets your attention...

Well actually yes they do have a manual, i.e. click the link :-)

http://support.radioshack.com/support_electronics/doc6/6361.htm

Thats the manual

and for the rest of you folks with RadioShit I mean Shack scanners
this is the list of manuals for everythang they make :-)

Hi John
Yes, I followed the instructions exactly, Anyway, pleased to say the refund has finally reached the bank account, although it took 15 days, it amazes me how these companies can take money from your account within seconds, yet take over a fortnight to return it. As I said before, Argos and Maplins can do a refund in under 48 hours. It's not just the refund that pi**ed me off, I was charged for "next day delivery" I work nights (7pm to 7am) and had to wait up for the postman, then when it never arrived and after a few more phone calls I discovered it hadn't even left the store. this meant I had to wait up again the next day.
I wouldn't deal with them again.
regards

Did you get a full refund...including any postage charges??

If you did..you've had a result as the passage you quoted states

"If you purchase products by mail order, you have the right to cancel the transaction for any reason and return the products within 7 days after delivery for a full refund (but not the original carriage charge). "

I suppose it all depends on whether you returned it as faulty or under the no quibble guarantee

TrunkPCR Version 0.7.177 Update is available for downloading here:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a couple bugs:

Aug 05,2005 - Fixed: Listening to Continuation Calls (Same ID).
Aug 08,2005 - -----: "Save Bank" now saves Group/Radio ID's if changed.
Aug 10,2005 - -----: Combined Trunk ID Edit and Group/Radio Stats.
Aug 10,2005 - -----: Changed Trunk Menu to reflect above change.
Aug 15,2005 - Fixed: Saving Settings in Registry with Permissions..
Aug 16,2005 - Fixed: Saving Last Used Channel if VFO turned CCW.
Aug 16,2005 - Fixed: Scanning During Trunking. Previous change in
decoder...

Plus a few other things...

Regards,
Jay

Our county mandates NIMS/ICS (Incident Command System) for all
agencies. They still use APCO 10 codes for day to day chatter, where
NIMS is a management system and not radio-specific. I don't recall any
mention in this or advanced NIMS courses about avoiding 10 codes, but
an unwritten given is all should be using the standard APCO 10 code.

FEMA offers a simple and free online NIMS intro course here open to
anyone:

http://168.143.180.84/FEMA/VC/is700_NIMS

It takes about 3 hours, has multimedia and is well done. You take an
online final, get an email pass/fail, and a paper certificate about 8
weeks later via post.

The above IS-700 course is mandatory for RACES membership in our
county. Good idea, as it makes sure everyone is on the same page in
the big picture, and defines who does what.

Nahh $50.00. He did not pay for himself, so why a cash windfall all of a
sudden? No recouping a purchase here,
just someone out to make a Fast Four Hundred. Why pay a large sum so that
this guy can cash in and get seed
money for a 50" Big Screen to watch NFL games while munching on Pork Rinds?

3357. Outdoor Antenna Questions

Newsgroup: rec.radio.scanner
Date: 2005-08-21 03:57:13 UTC
From: "bcd396@gmail.com" <bcd396@gmail.com>
Message-ID: <1124596633.918742.81690@z14g2000cwz.googlegroups.com>
Source record: 12469

Hello All, I've got some questions about outdoor antennas. I monitor a motorola type II trunked system in Colorado Sprigns, CO.

I've got a 20-043 discone from RS, a uniden bcd396t, and 70 feet of RG-6 quad-shield of cable inbetween. The antenna is on a mast 12 feet in the air above the house.

Much of the radio communication is choppy; is that a artifact of how I set up the system? Is this a good setup of cable/antenna/radio? I've read some information about tuning antennas, but is that something I still need to do in this case?

Thanks!

first check all connections
then get the ant up in the air 30 feet minimum about housetop
if you still have problems then cut coax run
70 feet coax for a 12 ft above house run.....
that's first place i would look
was coax new or used when you put it up

Who else offers a freq database?

I already have police call IMO, other than public safety there's not much
else on the CD or in the book that is very interesting.

yep...saw a movie..an old one starring montgomery clift. the credits
said everyone in the movie apart from clift was active duty
military...it was about the berlin airlift.

as one of the planes comes into the airport, the controller asked him
to 'qsy' to another freq. was amazed...

I got another 6 feet, so it's about 20 feet in the air, and that was it. I have a tin roof, and that might have been blocking when the antenna was lower.

I also routed the coax around the eve of the roof to the office, instead of through the garage to the basement up through the floor. It might have had some interference in the basement.

I have one single run of coax, 70 feet, and I used compression bnc fittings on both ends. I got the cable right off the spool at a local home improvement store.

Thanks!

No new models from them for while in the scanner arena.

The website has no scanners on the front page any more.

They seemed to have branched in another direction.

Any one know any more about what's up.

The distance and quality of the cable might well be the problem, i.e.,
signal loss. Also, anyone in CO with an antenna should take care with
lightning protection, metal roof or not.

You might consult www.strongsignals.net for estimating the signal loss
vs cable quality.

3366. A trip to Australia with scanner radio

Newsgroup: rec.radio.scanner

there are many australian scanner web sites, go do a search for
australian scanner frequencies and ask the web page operator

I have bought scanner radios from UK and Australian merchants nad had
them shipped into the USA, they work just fine..

I also frequently with at least one (usually 2) scanners and a shortwave
radio (sony-2010) plus I have a frequency database in my laptop

It's fun to listen to the tower, approach, and center frequencies as
well as the airline ground frequencies. The civil aviation frequencies

are the same 108-118 mhz for navigational nd airport beacons and
118-137mhz for voice and ACARS data.

ARINC (aeronautical radio incorporated) also has an international HF or
shortwave radio network they operate for aircraft flying internationally
and over oceans to report positions and receive traffic clearances. This
in addition to the USA network. ARINC VHF frequencies are in the
128-132mhz range and AM modulated.

the first time they saw me, airport security asked what the scanner was,
now, I usualy have the tower or one of the active TRACON (approach or
departure) frequencies in the scanner when I go through security, IF I
dont, the security people often ask to listen to the tower more as a
matter of curiousity.

It is legal to possess and use scanners in Australia. No license is required, and the usual limitations apply, like you cannot use it commit a crime, cannot listen to mobile or cordless phones, and cannot make financial gain on the information you hear over the radio.

It is also legal to carry a scanner on the plane. Since scanners frequently look like radio transmitters, you might get some hassle at security about whether it is turned off. In some cases I have heard them ask that the battery be disconnected. When I've taken one in carry-on baggage, I've never had any problems.

It reflects the current market - as in not much call for scanners now in the UK. Let's face it, people only bought them to listen to police, phones and PMR. Now a lot of it has gone digital and the only real enthusiasts are left, they only form a small percentage of the market. So companies have decided not to flog a dead horse so to speak. There is no point in bringing out new models when there is no real demand for current models. Sales have fallen consistently.
That's about it. If anyone else thinks differently then fine. Try selling a scanner now, people ask "what can I listen to" and the reply is a very short one! Not much.
We have to face facts and companies have, so that's why you're no longer seeing any new models!
It's a shame really. Scanning has gone the same way as CB radio in the UK.

Just got back from a trip to Australia. Took my Radio Shack PRO-94,
had no problems whatsoever. The security people just asked me to turn
it on to make sure it worked. We had a 24hr layover in Narita Japan
the motel was right next to Narita airport, listened to the tower just
about all night long.
While in AU, I scanned all the air freq's till I heard something, the
fact we spent most of our time in Cairns, the airport was fairly busy.
I then scanned all the HF fereq, till we heard something, so in short
there was always something to listen to.

yes but no manufacture just made scanners for UK only

the fact is while like of AOR/JUPITERU/

forget the scanning market Uniden in USA is making scannerrs like there is no tomorow and although some things are only needed in USA people in UK are buying them and making good use of them

the police marrket was only a small market,most largest i would say is AIRBAND,civil and less but still substantial mil airr listening.

police and 999 were big too,but people apart from those just into police area realsising there is so much more out there.

and indee d the reporting of those freqs found has never been so good,when people listend to police i hadly got any freqs sent that were non police,now i get loads.

and in fact scanners are actiually selling pretty well,if someone selling cant tell people whats out there honestly then thats a pretty poor company

last yea i happlily told people remember this wont pick up police on there new sysatem,and people often said,well i never wanted thenm in first place.

sadly i will prob buy anything new if i can afford it from USA,i can get stuff cheaper and just as quick and now for first time a better choice ofd radios with more advanced features for my needs.

the pmr on site market for a start has never been so busy,its only wide area systems that really have dived in use.

take a look in a town main street and shopping areas,so many radio councils security wardens/shops/pubs/leusure centres.

just in last 3 months anoth 1200 freqs i have added to PROMA dbase here is just some

some i have to say are also re confirmations of freqs already in but most are newly found,ie those airband ones arre just re confimations

3373. Listening to airband frequencies

Newsgroup: rec.radio.scanner
Date: 2005-08-22 20:09:35 UTC
From: Pred02 <gbozovic@bu.edu>

Hi,
I just bought a radio scanner (radioshack pro-83) and want to listen to airband frequencies, however, I cannot find any on the airband. I tried doing the scan, and even tuning to specific ones, like Boston ATC and whatnot, but cannot hear anything.

Other frequencies, such as Police/Fire I hear just fine. I am approximately 10 miles away from a major airport.

Am I doing something wrong, or I really have to be close to the airport to hear them on the scanner?

Thanks.

Kind regards,
george

10 miles. I would have thought you'd hear things OK.

You'd be better scanning or tuning to the specific frequencies the airport uses. Do an Internet search for the airport and the frequencies it has. Best start would be the approach or departure frequencies, particularly at a time you have aircraft operating over or near your home. You can try control tower and ground frequencies later.

However, eliminate the distance question for a start. Grab a list of the frequencies and go to or near the airport and make sure you are receiving them there. Once you're confident with the scanner at close quarters, try again from home.

Oh I agree! I've got 6 gauge colid copper from the bottom of the mast
to an 8-ft ground stake (shared with house utilities). I still need to
find an inline supressor though for the coax.

No problem it was someone here who told me about it. I ordered mine from
them online, and within a matter of a couple hours I had the tracking # for
it. Took a few days UPS ground which is included in the price, along with
insurance. If you want it faster they offer that too, but you have to pay
more. There was a few on line dealers that matched the price shipping and
all, I tried this one because they were recommended first. If you check the
246T Yahoo group many people had equal success with a couple other dealers
also. I can't see someone paying anywhere near $200.00 for a used one when
you get a new one, complete with all the accessories for that.

Hmm.. I cannot hear any frequencies on the airband. I tried tuning into many of the local frequencies, but even with the search function on the airband I cannot hear anything. There is a blank noise on 125.0, other than that nothing. The scan function works fine with tunning to weather and police/fire frequencies, but nothing for airband.

I suppose I am doing something wrong. I have the Pro-83.

Any suggestions?

kind regards,
george

you can use assitional softwarre or hardware on mpt1327 but in facts its not needed so much as following converations especially on the on site trunk nets is usually quite easy 4/5 freqs,the annoying ones are ones where control ch has been set to change and rotate through the other channels every few mins

but if on site all one does is then monitor the input,mobile freq.

as far as ican make out thee for example ob that ione is one xontrol and one voice,so in fact all comms on one freq,as you can have single/dual channel or multi channel mpt1327 and not always fully trunking between 3 o more freqs.

others are set up so forr 99 per cent of day to day listeninin is on ay 456.6 the voice channel i havve on the above one,but then suddenly a seocnd freq for voice is found because more than usual amount of activity is on the net,then you suddenly find another freq in the trunk net.

so just type in the voice channels known of any tunk net and listen,if you then want to use softwae and hardaware for some systems then there are some who are really into that and know a lot more

Around Boston there must be quite a few active freqs.
Things to consider:

* All air comms are AM
* In search, use 25 khz steps [or 12.5 or 50] from 119 to 140 mhz
* You might hear only the aircraft side on the transmissions at 10 miles with
a rubber duck antenna.

Still, during any day you should have no problems finding active freqs as
aircraft travel to and fro.

how do you figure you were right???

wqho is right ??

scanners are still selling both new and secondhand,ok its not as good as it was,but many people are coming into this hobby brand new and ok would like yo have police but they donyt generally worry about it.

i have new members join scanproma every week of whixh some are new to hobby completey and AIRWAVE did not put them off there purchase.

there is definately a need for AOR/YUPITEU to brring in new models ctcss/dcs/tagging perhaps there own versions of close call.

but Alinco and Icom do not see,m to have been put off by AIRWAVE do they?

icom r5/r20 and alinco dj-x2000 all totally new models even tohugh airwave was already there in many pats of uk.

the market as said is not as big as it was,but again thats down to people like AOR/Jupiteru not listening to the needs and making things to suit there needs and not ours

AOR expecting peopole to pay £70 for add in boards that most scanner manufactees have built in now as standard really piut me off AOR

why should i pay £70 for a ctccs board ,a sub standard one at that,whwen i can buy a scanner with both ctcss and dcs built in??

AOR need to take note of what out there in USA,and start offering us something better.

at the moment the UK market is being pushed by the USA market,those who dont know about the features on scanners go out and buy there bulk standard models in uk shops but those in the know will source thwe USA scanners.

as for things to listen to i have proved a thousand times how much there is out there and latest scanning directory will show even more.

its there,what you choose to listen to is personal,many will happily listen to things that others say are boring,if you dont want to listen or find new freqs then so be it,i prefer to have less scannerists providing me with betterr information than someone just senidng me aleady published police/fire freqs.

the uniden models relased in USA can easliy be released by Uniden europe but again they are as short sighted as AOR and the others.

the markets there,they just dont have any ideas to utilise it

I agree Paul, Uniden europe need to pull their fingers out and realise there is a market for the features employed on Uniden USA scanners. I mean the decision to leave close call feature out ot the ubc 92 to save money only saved our money because there is no way we are going to bloody well buy it!!
As for AOR I asked them about this and this was their reply
"We have not abandoned the hobby market, as a SMALL company we cannot bring new product to all market sectors simultaneously... currently we are busy with other commercial / government products."

Isn't RG6 coax 75 ohm TV cable? I think your scanner is designed to
take 50 ohm coax for optimum performance. Suggest you change the coax
to 50 ohm and if you have to use 70 feet, upgrade to something like
RG8/U or RG213.

Again, it doesn't matter. No scanner is 50 ohms across hundreds of MHZ
anyway, and a 1.5 to 1 mismatch is nothing, especially on receive only.

Nothing on the airband around my house. Perhaps I am using the scanner the wrong way or something, when I search the airbamd 108-134. Perhaps I will drive closer to the airport and try to get some frequencies over there to see if it works at all.

But I bet I am doing something wrong.

> squelch should be set differently?

George, the usual way to set the squelch is to start all the
way clockwise (fully on), begin scanning, and slowly turn the
squelch anti-clockwise until you hear noise--that is, until
the squelch is below the ambient noise level. From that point,
turn the squelch back clockwise enough to make the noise stop,
plus just a bit more.

With the squelch set all the way ON, as you had it, only a
very strong nearby signal will be enough to break the squelch,
so this may well be why you aren't hearing anything yet!
Good luck!

I agree. Further to that, your RG8, RG213, or heaven forbid RG58, has
much more loss per unit length than a good quality RG6. Any signal lost
due to the 75ohm cable will be considerably less than the loss of the
other feedline.

Good quality RG6 makes fantastic scanner coax, but you have to be very
careful with your terminations and adaptors.

Did not know there was a I or II. What's the difference? Are the I and II
more valuable? Why? Never even heard of them. Where do they sell the I and
II, and why are they worth used what a new III goes for?

Well, yes. I thought I gave you some suggestions. To repeat:

"You'd be better scanning or tuning to the specific frequencies the airport uses. Do an Internet search for the airport and the frequencies it has. Best start would be the approach or departure frequencies, particularly at a time you have aircraft operating over or near your home. You can try control tower and ground frequencies later.

"However, eliminate the distance question for a start. Grab a list of the frequencies and go to or near the airport and make sure you are receiving them there. Once you're confident with the scanner at close quarters, try again from home."

Did you try this?

Search from 118.0 to 137.0 in 25 KHz increments.

Make absolutely sure you are using AM modulation and not FM, NFM or WFM.

If you keep it going for long enough you *must* hear something eventually,
unless you scanner is broken.

It appears that the I,II or III equates to the protocall that the
receiver will accept. Check Google for the BC246T and you will see
hundreds of sellers. Price seems to be around $215 or so.

Hey thanks,

I finally received an email from PerCon this last Monday (guess they where on vacation) with User ID and Password. I wouldn't have made a fuss about it if the printed receipt didn't say "Your User ID and Password will be e-mailed to you within one business day." That Thurs I sent out an e-mail to them and didn't hear back so I was wondering if they'd gone out of business.

I was all geeked up to spend the weekend putting it all together and programming my scanner too.

Anyhow, I will definitely check out the FCC Data CD. I'm really seeing what I've been missing with the amount of info I'm getting from PerCon. And $19-$30 is definitely within my budget. I know I could've found much of this on the FCC site, but getting it into a comprehensive format would've been a real chore.

One question about the FCC CD, I never had the PerCon CD to install, so is it possible to create the mslop access file without ever having a owned a PerCon product?

Thank you for your suggestions.

Hello Predo,

My 83 was deaf in the airband until I switched from the stock antenna to a Diamond RH77CA.

The telescoping antenna that Radio Shack caries may also work as well. I did notice that if you have the stalker turned on with the Diamond ant, you get a lot of false captures. I would try the RS antenna, and if that doesn't work you can always return it.

Good luck...

Was the scanner in checked or carry on luggage? I have always been
toocowardly to take mine with me for fear that I will be told that I cannot
take it with me (admittedly I normally use an amateur HT as my scanner).

All I can find is BC246T III. I "think" if someone told you there was a I or
II, they either were just making it up to have a laugh at your expense, or
you just made it up because you don't know what these are. The "III" seems
to be "third generation Trunking Scanner". It does not look like there is
any such thing as a BC246T I or II. As to price they are all over the place.
Obviously some people are careless enough to pay more for a used one than
they could get a new one with warranty for. <shrug> Hell if anyone wants to
buy some new ones for $250.00 or so I hope they let me know. I will be glad
to sell them new ones in the box for that, since I can buy them for $214.00,
and less. <G>

Winradio has the software that will let their scanner track an MPT1327
trunking

other than that you will need at least two scanners(one needs to be
computer controlled) and some software

Kev

We didn't take any checked baggage, carried right onto the plane with
no problems. Now I knew I could not use on the plane. I had a computer
case with a portable DVD player, 2 digital cameras, mp3 player,
scanner and all the cords and chargers that went with all that. They
never blinked an eye when it went thru the scanners. *shrugs*

Does anyone have or know where I can get the list of
frequencies that are preprogrammed?

Also, is it in an EEPROM that could be duplicated then modified to
work a better list for my needs?

Thanks,

Burt

yes but that not abslutely necessary

one can follow mpt1327 epsecially on site with not too many problems and
indeed some are just one voice and one control channel 99 per cent of the
time so in fsct you mostly stay on one freq

i listen to many trunk nets and dont use any software or hardware,apart from
met police which use a differant trunking one can get scanners for till
airwave anyway

My old Uniden (BC855XLT) finally died last week. It did me just fine for many years and now, trying to replace it gets more confusing every day. One guy says I need trunking, another says triple trunking, yet another says they'll be coming out with quad-trunking soon. I'm considering the BC898T at around $200 but wanted to run it by here first. Good choice?

What you "need" is to find out if what you want to listen to is now, or is
planning on going digital. The Radio Reference page makes a great place to
start. If what you want to listen to is mostly 800 Trunked there are a
couple great choices, but if you need digital the Trunking will not help.
I have a BC246T and love it! They do not get Mil Air, which I don't care
about. They run $215.00 delivered to your door and are a very good compact
scanner.

I can't argue with anything you said ... yeah, we're being phased-out,
but I spend lots of quality time with my MK3, even though I suspect it
is the last scanner I'll ever buy.

Maybe scanning isn't what it used to be, but every range in my neck of
the woods is still alive with non-stop action. In fact, I have it on
bank scan right now, and it's chirping like a songbird.

Sometimes I'd like to add a trunking unit, and Uniden is making it
mighty tempting, but frankly, I really don't think I need one.

the unidens have many feautures but the trunking they have is for USA
systems,some do work on the current 3 systems in UK using the same protocol

but we dont buy unidens now pimarily for trunking

memories the latesdt ones have 1500-5500 mems[dpeendant on model]
alpha tagging
ctcss
dcs
excellant scanniung and search facitilities
and close calll whixh is a freq counter with audio,you go into town orr
indeed on this one in a reasonable area you can sit at home and depening on
aerial used it can sniff freqs out and you listen to the audio

on my bc246 on an active aerial in the loft i have aircaft round
bovindon/barrkway/brookmans park at 30,000 ft come in on the close call,or
working stanted or luton or local airfields or compoany ops etc or indeed i
see 2 aircraft in formation and suddenly my counter clocks the freq in use.

AOR sting you for £70 for a card to just do ctcss and its a pretty poor
quality arrangememnt at that,very hit and miss
£70 for more memories
£70 for softwarre and lead

btw lead comes with latest modela.

at the time AOR8200 came out ctcss was being put on radios like thw yause
vx1,a tiny little radio,so tell me why AOR did not add into the
radio,already icom and others wee alsoe adding into small radios,yet the AOR
commes out and then the base AOR8600 and again an add on at great
expense,sorrry i dont think thats a good way to treat customerrs,squeezing
money out of them for thigs that were added into other sets.

Well your first problem is it's a Radio Shit I mean Shack "Compact
Handheld Scanner" and your 10 miles away from the airport.. If you where
1 mile away it might, I say might work!! The antenna on that "Compact
Handheld Scanner" is junk. You need a real antenn pluged into it.. A
better bet for what you want to do would have been the Pro-2052 heck
Radio Shit only wants $149.99 for it.

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=
20-432

or a Uniden BC895XLT or any base or moble scanner with a real antenna,
any real antenna... That crapy rubber ducky thingy on that "Compact
Handheld Scanner" is just there for looks, you want to hear the airport
click the link

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=
20-043

mount it 20 feet above your home.

Ahhhh, camouflaged scanners - now that is a good idea. Guess that as it was taken with a lot of other electronic type gear, they probably didn't twig (or maybe care), who knows.

Thanks

Matt

It's a Bearcat BC92XLT, manufactured by Uniden and repackaged for RS.

It's decent for a $69 scanner.
I like mine.

Source record: 12383

Newbie legal/detection questions:

I have been lurking here for a long time but haven't posted here
because it's hard for me to post from work. Now I'm on vacation.

Anyhow, I live in the New York metropolitan area and bought a scanner right
after 9/11 because I want to know more about what's going on.

Questions:

- Just how ferocious is the law prohibiting people from sharing what
they've heard over the scanner? In reality, can I tell my spouse about
interesting calls that I've heard? If I were a crime reporter, could I
legally call the police PR people to ask them about an incident I
learned about while monitoring the scanner? (Technically, of course, that
would be a form of sharing information with a third party.)

- I have a Radio Shack PRO-94 scanner. Just in case the authorities ever
do outlaw scanners, does my scanner actually emit some signal while
operating that could alert authorities to the fact that I'm using it?
To people "scanning for scanners," does a scanner appear to be different
from a regular radio or a regular television set?

$69.00 the Radio Shit I mean Shack web page show it at $119.95

PRO-83 Compact Handheld Scanner with Signal Stalker and Skywarn Button

$119.99 Brand: RadioShack
Catalog #: 20-501 Model: PRO-83

"Skywarn Button" a button to warn you if the sky is falling :-)

It still needs an antenna 20' above the roof of the house to hear an Airport 10 miles away.

Message-ID: <ke3vg11imcsvpisr77v4sbt3fnnk360msi@4ax.com>
Source record: 12385

huh ? what kinda DATA stream ???

dunno about Linux , but to do it in MS ..... (and probably
any other OS)

1. to make that work , you have to know the type of datastream
and then choose appropriate stuff / procedures for that
type of stream.

2. for example ..... to decode the datastream of a trunking
control channel , you need a single level slicer or a
simple schmidt trigger to convert the analog level slicer stream into
a digital level stream. the output is (often) plain serial ,
digital, after that. an ordinary " packet " sniffer or serial port
dumper / monitor program could give you the raw data. specific
streams require stream specific programs to decode to useable output.
many programs had " raw " output mode. programs like " pager software
" pager serial streams, trunking software for trunking control
channels, and cellular software for cellular tower data streams.

3. flex / 4 level encoded data streams require a quad level slicer
to separate the digital data streams properly. then you need an
appropriate program with " raw " output (many of them have it)
for that stream..... like in decoding " flex " paging systems.
raw dumps of 4 level slicers would likely only produce
confusing (to humans) meaningless looking output.

4. if your signal is a digital " codec " wireless mike , for example ,
then you must use a schmidt trigger or single level slicer into
an external compatible " codec " chip intermediate translator
device to properly decode the datastream. optionally you can
, if you know how, use the MS selection of audio codecs contained
within every current MS OS and choose one of them to decode the stream
and output it through your sound card. a " raw " output of this type
stream is of NO human value , except for design and testing purposes.
there are many more types and variations of digital data stream
handling. you must know the type of stream and develop a strategy to
manage THAT particular type of digital demodulation. your program /
hardware selection " must " address the specific type of stream you
anticipate encountering.

many people utilize an " intermediate " decoding device to accomplish
digital signal decoding. apco 25 digital , for example , has NO MS OS
specific codec . it takes a specialized apco 25 decoding chip to
deliver the digital voice codec from a apco 25 encoded signal. people
might buy a used 1st gen apco 25 HT on ebay and then feed the output

from a single level slicer into the decoder chip portion of the HT to obtain a voice output from the disc signal output. this has been used successfully , all the way back into the early cellular telephone days when old brick phones were used simply for their decoder chips to feed the output from a scanner into . a study of those old cellular digital decoding processes are a good resource for this type of endeavor.

it's WAY more complicated than most people expect.

k.....

3424. FCC SHUTS DOWN the 'Boy Broadcaster" from ME

Newsgroup: rec.radio.scanner
Date: 2005-08-26 22:44:43 UTC
From: Maritime Phone Patcher <baaahahahahah@yahoo.com>
Message-ID: <8b74a$430f9b49$d1cc79e4$5792@snip.allthenewsgroups.com>
Source record: 12386
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave

*** SAY GOODBYE TO K1MAN FOLKS !!!!! ***

ENFORCEMENT: FCC SETS ASIDE K1MAN LICENSE RENEWAL
(from the ARRL Letter)

The FCC has confirmed that the agency has set aside the license renewal application of Glenn Baxter, K1MAN, of Belgrade Lakes, Maine. This after routinely granting it on July 22nd.

As previously reported, Baxter received a $21,000 Notice of Apparent Liability from the agency which has not yet been paid. His current license expires on October 18th. In years past, if a person contested fine and his or her license expired during the period when the matter was being adjudicted, that person could continue to operate until a final determination was made.

That all changed in November of 2004 when the agency enacted the so-called "Red Light Rule" With the "Red Light Rule" in place, the FCC can decline to renew a license during the appeals process and order the person off the air once his or her current license expires.

The agency's July 25th notice to K1MAN was signed by Tracy Simmons who is Associate Chief for Licensing Operations of the Public Safety and Critical Infrastructure. Division of the FCC. In it, the FCC says that the set aside is for enforcement review purposes. Whether or not the regulartory agency will invoke the Red Light rule in Baxter's case won't be known until after October 18th unless he pays the NAL or settles the matter in another way before that date.

Back on November 1, 2004, the FCC's put its "Red Light" rule into effect. Under it, the agency must withhold action on applications and other requests for benefits when the applicant is shown in the FCC's database as being delinquent in non-tax debts owed to the Commission. This means that the regulatory agency will no longer accept applications from debtors, process their pending requests, or provide other benefits until the delinquency is resolved.

To make this work the Commission checks its records against each application under that applicant's federal registration number.

This, to determine if the applicant or any other entity using
the same taxpayer identification number is delinquent in
any debt owed to the Commission. If the Commission finds
that the person to be a delinquent debtor, the request is "red lighted."
The Commission then stops the processing and notifies the
applicant that he or she has 30 days to either pay the debt
or make arrangements for payment of the debt. If payment
arrangements or correction of the records is not made,
the Commission will dismiss the application or request.

There are three extremely limited exceptions to this rule.
First, if the applicant through an attorney files a timely
administrative appeal or has contested the existence
or amount of the debt, the debt will not be considered
delinquent under the red light rule until the order in
question is final. Also, the FCC will not consider it to
be an immediate debt if the automatic stay provisions
of the United States Bankruptcy Code have been
invoked and are deemed to be applicable in a given case.
Lastly, the Commission will process applications for
emergency or special temporary authority involving safety
of life or property including national security emergencies.
Other than these, the delinquent applicant either must
pay up or take the chance of loosing his or her ability
to continue on the air.

any of those handy serial port monitor programs similar to
Link Ferret , and the zillions of others, will look at what you have
going into the serial port OK. shouldn't be a problem.

like these ....
http://www.hhdsoftware.com/sermon.html
http://www.aggsoft.com/serial-port-monitor/

if you happen to know the serial datastream is supposed to be
handy ascii , then an old trick is to connect an old dumb terminal
to the slicer to take a " cheap " look. using some of those
generic " terminal programs " (like comes in MS OS)
and setting them into raw download mode or dumb terminal
mode will do about the same thing without fiddling with switch
settings. good luck to ya ..... sounds like phun ....

There really is no law on what you do with the info you hear or even
record from a scanner.. The only thing the FCC does not like you to do is
retransmit cordless phone calls. other then that tell anyone you want,
record it all day long..

Hi all:

I just purchased my first scanner in hopes of getting into a new hobby. With this in mind, I will apologize in advance if some of my questions seem "elementary"

I am also interested in aviation but cannot seem to locate a good listing of airport frequencies. I am assuming that airports all operate on one specific frequency for a great deal of their communications with the aircraft. Could someone please give me these frequencies or direct me to a website where I could get them?

Also, I have been told that purchasing a frequency "guide" would be a waste of my money. Could I please have your opinion that would include a good source of frequencies?

I live in South Florida, Broward county to be exact, and would also be interested in a local "club".

Thank you in advance fir any help you may be able to give me.
Glenn

Right about this point I would like to introduce you to a system known as
Google. It's quite incredible really. I'm surprised you seem unfamiliar with
it operation.

Airports do not operate on one frequency. They use several (small GA
airports) to dozens (larger airports)

a search on Broward County Airport returned:

Airport / FBO Information
KFLL FORT LAUDERDALE/HOLLYWOOD INTL FORT LAUDERDALE
FL Time Zone: ET

Lat: N 2604.4 Long: W 08009.2 Elev: 9 Var: +04 Longest
Runway: 9000
Clr Del: 128.4 Dept. ATIS: 135.0 Arr. ATIS: 135.0 Ground:
121.4/121.7 Tower: 119.3/120.2

ATIS is Airport Terminal Information service.
CLR DEL is Clearance Delivery
Dept Departures
Ground is for ground movements
Tower is, well, for the Tower.

Try it for yourself, you'll get results within millisecond, instead of days
awaiting others to do all the work for you.

Brad.

BULLSHIT.

A transaction is a transaction. The fact that one has a minus sign in
front doesn't change the speed at which a transaction can be
processed. The only reason refunds take longer to appear than the
original charges is because companies purposely drag their feet. And
the reason they get away with dragging their feet is because sheep
like you put up with it.

Bottom line, this company has a return policy, which the OP coimplied
with. They have their merchandise back, but the OP doesn't have his
money. And that ain't right.

> My 83 was deaf in the airband until I switched from the stock antenna to a
> Diamond RH77CA.

The Diamond RH77CA is an excellent scanner antenna, much better than the short stock duckie of the Pro-83. I just picked up the RH77CA for my 83 and lo and behold, it "hears" much better now on all frequencies. I got the antenna at Universal Radio. I would suggest that Pred02 pick up one of these as it will probably make a noticeable difference in reception.

I am quite familiar with Google. They are my homepage.

I always thought that newsgroups were intended for a purpose like this (among others) ((Please correct me if I am mistaken and I will not post any such type of messages anymore)). I did not intend for anyone to do any "work" for me and I guess I must apologize to Brad for any inconvenience I might have caused him.

As my Grandfather used to say... "It takes all kinds"

A sincere thank you to those who have helped me in a civil manner.

Message-ID: <1qa1h1h28deqh7tr3o5rg19mi0kio0hufl@4ax.com>
Source record: 12307

On Fri, 26 Aug 2005 15:31:48 -0500, Al Bell <allbell@ctc.net> wrote:

Nope, searched high and low, and I too feel the RS belt clips are all
too cheap, and a have a "toy" feel to them.

Silly.. for a precision instrument to be dangling on your belt like
that. (especially if you're in an 'active' line of work, ie-
scrambling about on foot at response scenes, etc..)

Anyway, I came up with a cool solution for the PRO-95.

By the way, I own the PRO-95, and the PRO-97. Both EXCELLENT radios.

However, the PRO-95 has more of a "rugged" outdoorsy feel to it.. with
it's heft, and all- black casing. It's also the size and shape of a
professional 2-way radio, (ala Motorola HT-1000, etc).

So, after struggling with a solution, I had to make my own, to bring
it up to par for the reliability I demand when outdoors.

Here's what I came up with... (warning: it's going to cost you some
bread if you can't find an old motorola clip laying around... you may
just have to by one.. but it requires destroying it.. you'll see.)

I can't upload images to this newsgroup, so here's the link to what I
did:

http://www.hogger.com/scanner/

I hope this helps.

At least here in NYC, all the news agencies, have personel sitting at their headquarters monitoring the first-responder's frequencies.

If something goes down, they use their two-way radio to their guys in the field, and dispatch them to the location.

I monitor THEM too... and it's kind of funny to hear them relay the information back and forth.. and their commentary.

The other thing, most 'stringers' carry their own portable scanners, and rove about the city late at night, hoping to get a scoop, and good photos of an incident.

If used repsonsibly, scanners are a TERRIFIC thing for civilians to have.

At almost every large fire, you'lll see the "buffs" together, with their scanners on the sidelines.

Community watch groups and civilian security patrols most use them to help and protect their own communities.

When there's an APB out for a missing child, or car used in commission of a crime, extra eyes and ears in the field provide a wealth of help to our already understaffed forces.

Just don't interfere with first-responder's operations, stay low-key, and don't ever try to be a hero. It's not really worth it.

Information is their best help right now.. so, if you see something, say something. Call 911.

As far as specifically tracking someone RECEIVING radio frequencies, I'm not familiar with any piece of equipment capable of doing that.

If such a device existed, I have no idea how it would differentiate someone's AM/FM stereo, wireless router, baby monitor, coordless phone,or garage door opener from a scanner. (Yes, I know, some of them transmit.. and that can be detected.. I mean from the "receiving" point of view, for example.)

Go with the 246 from uniden.

it is the best value dollar for dollar in the market I have owned most scanners on the market offered today. It does not have wfm and mil air so if you need these you might wait for the follow up scanner due out soon which is supposed to be full coverage down to the shortwave bands.

I live 14.73 miles from our airport, with the Diamond RH77CA on my Pro-83 I
can hear the Tower, Approach and Departure as clear as day.

If he wants to put "an antenna 20' above the roof" I'm sure he could hear
the Airport, but I don't think it's necessary.

> the years.

I have serviced multiple IC-R7000s, IC-R7100As, and other ICOM radios
(e.g., IC-275H) with the same problem. The reference oscillator crystals
in those radios aged after use and shifted frequency. In some cases,
like yours, they go too far off frequency and must be replaced. Check
with ICOM USA for a replacement crystal.

Too bad ICOM didn't burn in the crystals *before* final factory
alignment.

I've not had this problem with the IC-R8500.

3455. Pro-34 opinions

Newsgroup: rec.radio.scanner
Date: 2005-08-28 05:21:08 UTC
From: Buzzygirl <buzzygirl@nospam.comcast.net>
Message-ID: <6qGdnemkL5Mg1IzeRVn-iA@comcast.com>
Source record: 12317

I was just given a Pro-34 scanner by a friend who bought it some years back to monitor airband frequencies (he's a pilot), but then he got a dedicated airband transceiver shortly after purchasing the Pro-34. So he put the scanner away; he said he used it for a total of less than two hours. It appears brand new, there's no dust on it, but there is no AC adapter or manual (I found an operating guide online). I already have a couple of scanners, but I said I would take it anyway.

I turned in on last night and programmed a few local frequencies into it. It worked great, even with the stock antenna. I replaced that with a Diamond RH77CA antenna, which pulls in signals much better. I was pretty impressed by its sound and sensitivity. It's bigger than anything I currently own, but still not too ungainly for a portable scanner.

So, my questions: has anybody on the group ever owned of these scanners? How did you find their performance to be? How does it compare to more current models? I don't really need this scanner, but I don't know whether it is even worth putting it up for sale. I noticed that several of these sold on eBay recently for between $50-$72 US, which seems rather high to me, but I have no idea if that price range is realistic or not.

If the consensus is that it's a good performer, I may just end up keeping it, since we have very little trunked scanner activity in my listening area anyway. But I need another scanner like I need un agujero en la cabeza... :)

It's a decent performer. It can also easily be modified for cell
frequencies. That would probably explain the high prices. I have seen them
go for much more...

I did check the varactor diode voltage and it checked ok.....I wanted to make sure that the thermistor didn't open up.
Thank you also for your tip, Bob.
The problem did turn out to be the crystal.....apparently, some of the metal from the plates that hold the quartz element itself migrated to the element, increasing its mass.
It's funny.....on Icom's website they mention that this is an ongoing problem with the R7000. One would think that they would address this problem in later iterations.
I did repair the unit. First of all, I replaced that cheap plastic trimmer with a good microwave unit (Ceratrim). Next, I removed that 1pF shunt capacitor that was in parallel with the old cap. As it stands right now, I can tune the 2nd LO up to 1.5kHz above the desired frequency. Not as much range as I would like, but hopefully, the crystal has done its ageing process and I won't have to go into the receiver again.
I am going to order a replacement for the reference crystal, just to have on hand.
Overall, the 7100 is a good receiver. Looking through the service manual, it appears that all 3 of the mixers are doubly-balanced diode ring mixers that operate with +10dBm of LO rejection, so the IMD performance should be pretty decent. It also appears that Icom finally decided to use glass epoxy circuit boards. I didn't know when they had decided to start doing this, since this receiver was designed during that "transition time" when there was a mix of both FR4 and Phenolic being used.
Maybe they finally got tired of repairing those cold solder joints that would develop over time.
Oh, their quality control.....it was pretty funny when I removed the covers from the shield assemblies and found fingerprints on the inside!
I've got the receiver burning in right now.....after another half hour of running, I will do the final calibration on the 2nd and 1st LOs.
Thanks again for the tips, Mike and Bob!

Pete

the pro-34 has held a little higher resale value (than other
similar scanners) due to it's ability to listen to the cellular
band.

if I were you I'd try to sell it on ebay, while the value is still
holding , because in less than 18 months the analog cellular
band will no longer exist. the FCC has decided to ' kill "
analog use of the 800 mhz cell band , by no longer requiring
providers to maintain services for the nearly non existent
remaining analog cellfones. after the cell band dies totally
(it's already nearly dead most places) , " all " new scanners
will most probably begin to cover that range of freqs again.
(because eavesdropping on cell calls will no longer be possible)
the near future value of that scanner is likely to decrease
dramatically. I say " sell it on ebay " , because the sale can
reach customers where the analog band is still active (south
america , some pacific rim areas) and because selling here in the NG
would most likely be futile since people here are aware that it will
soon become nearly valueless.

k..

I really like this antenna. I purchased 3 of them from Universal Radio. I originally bought one for my VR500, thought I lost the first RH77CA so I ordered two more. Found the first one under the seat of my car after the other two arrived, so I have now replaced the stock antennas on 3 of my radios.

It really brings the bands to life, even HF. Well definitely better in HF than the stock antennas are.

==========
January 29, 2002

Mr. Glenn A. Baxter
RR1 Box 779
Belgrade Lakes, ME 04918
Re: Amateur Radio license K1MAN

Dear Mr. Baxter:

On May 14, 1999, after numerous complaints about your Amateur station regarding broadcasting, deliberate interference, failure to identify, poor signal quality and erratic starting and stopping times, personnel from the Boston office of the Commission monitored your station and attempted to inspect it. There was no one present at your station while it was transmitting on Amateur Service frequencies. The transmissions continued while Commission personnel went to your residence at 1 Long Point Road, but there was no one present there either. Again on May 15 while your station was transmitting, Commission personnel attempted an inspection but there was no one present.

Since the Amateur Radio Service rules require that Amateur stations be under the control of a control operator, and that the control operator must ensure the immediate proper operation of the station, we requested by letter dated June 25, 1999, that you provide information to the Commission, pursuant to Section 308(b) of the Communications Act of 1934, as amended, regarding the operation of your Amateur station. You responded by letter dated July 25, 1999, but your response failed to provide the information we requested. We notified you of that fact by letter dated August 4, 1999, and detailed the inadequacies of your response.

Specifically, you did not provide the name, address or phone number of the control operator for any of the "broadcasts" or "bulletins" such as prerecorded interviews, transmissions of answering machine responses, live interviews, or live, pre-recorded or automated station identifications transmitted by your station. Among other deficiencies of the response, you did not provide dates and times Amateur station K1MAN transmitted without a control operator.

You also stated in your July 25, 1999 reply that you had not received our June 25 letter by certified mail and that our letter had "misrepresented itself as Certified Mail". We reminded you that you had signed the certified receipt for that letter, and we provided you with a copy of that certified receipt.

You responded to our August 4 letter by letter dated August 24, 1999. During our review of the information you provided, your Amateur station ceased operation. As a result, we held our inquiry in abeyance. The U.S. District Court in Maine subsequently dismissed your lawsuit against the Commission, and dismissed your petition for reconsideration of that dismissal as well.

You recently resumed operation of Amateur station K1MAN. In view of that resumption and the resulting complaints we are receiving about deliberate interference, threats against those who do not relinquish frequencies for your use or who would complain, or who have complained, erratic operation, broadcasting, unauthorized tape recording and broadcast of telephone conversations, business use of an Amateur station and lack of station control, we have resumed our inquiry into the operation of K1MAN.
In reviewing your letter dated August 24, 1999, referenced above, and your actions subsequent to coming back on Amateur frequencies, it appears that your understanding of certain Amateur Radio Service rules may be incorrect.

We will outline the apparent misunderstandings below.

Amateur Station Control
With regard to control of an Amateur station, your letter of August 24 indicated that the control device for your station was a "Radio Shack timer", and that the control points for the station were "the main power switch at the transmitter site" and at the location of the control operator, wherever that may be". You further stated that on the dates in question, May 14 and 15, 1999, you were the control operator and were in "both Belgrade Lakes and Augusta in either mobile or portable modes".

Section 97.7 of the Commission's rules states that "when transmitting, each Amateur station must have a control operator". Section 97.105 states that "the control operator must ensure the immediate proper operation of the station, regardless of the type of control (emphasis added). Section 97.109 states that "each Amateur station must have at least one control point", and that the control operator must be at the control point when the station is locally controlled or remotely controlled.

Section 97.7 further states that a control operator need not be at the control point if a station is automatically controlled. However, as Section 97.109 also explains, only stations specifically designated in Part 97, such as a space, repeater, beacon or auxiliary station, may be controlled automatically. There is no provision in Part 97 that allows an Amateur station transmitting information bulletins to be automatically controlled.

In summary, your control of the station by a "Radio Shack timer" while you are absent from your Amateur station is a violation of the Commission's Rules. You were not in control of your station on May 14 and 15, 1999 while you were in "both Belgrade Lakes and Augusta in either mobile or portable

modes". Your statement in your response that "K1MAN has never transmitted during the current license term without a control operator acting in full compliance with rules 97.105 and 97.109 as well as all other applicable FCC rules" is untrue.

Simply put, to comply with Commission rules, you must be at the transmitter, or at the transmitter control point, every moment your station is transmitting, when your station is locally or remotely controlled. If the station is controlled by telecommand from the control point using a radio link, the frequencies used for telecommand must comply with the Section 97.201 requirements for an auxiliary station (may transmit only on the 1.25 m and shorter wavelength bands, except 219-220, 222-222.150, 431-433 and 435-438 MHz segments).

Publishing a Transmitting Schedule & Interference
It appears that you may be under the misconception that by publishing a transmitting schedule of K1MAN, you have certain rights under Commission rules regarding the control operator and frequency sharing requirements that you would not otherwise have.

With regard to the requirement for a control operator, publishing a schedule does not relieve you of that requirement in any way whatsoever. Section 97.113(d) of the Amateur Radio rules states that by publishing a schedule of transmissions at least 30 days in advance, a control operator of a club station may accept compensation for the periods of time when the station is transmitting...information bulletins, providing certain additional conditions are met. Publishing a schedule of proposed transmissions, therefore, relates only to a club station control operator accepting compensation. We note that this is irrelevant to the operation of K1MAN because K1MAN is not a club station.

Simply put, to the extent that you start your transmissions on top of ongoing communications of other amateur service stations, you will be engaging in deliberate interference, in violation of Section 97.101 of the Commission's rules. No amateur service frequency is assigned for the exclusive use of any station. Your publishing an intended transmission schedule does not exempt you from that rule.

Threats to Complainants and Other Users
Your sending "Felony Complaint Affidavits" to other Amateur Service licensees who complain or intend to complain of your operation, or who do not relinquish frequencies to you, was the subject of a Warning letter to you dated December 11, 2001. You have also been warned about such "Felony Complaint Affidavits" by the United States Attorney in Maine.

The Commission will view any threats made by telephone, through the U.S. Mail or on radio frequencies to Amateur Radio licensees who file complaints with the Commission, or who do not relinquish frequencies for your use, as very serious.

Broadcasting
We also note that on your web site and in your radio transmissions, you

refer to your transmissions variously as "broadcasts, programs, talk shows, bulletins, pre-recorded interviews" and so forth. We have received complaints that you have broadcast comedy shows and commercial messages. We caution you that Section 97.113(b) of the Amateur service rules prohibits amateur station from engaging in any form of broadcasting. Certain one-way transmissions, such as information bulletins, are allowed as specified in the rules.

Tape Recording and Broadcasting Telephone Conversations
We have received and have under review complaints that you have tape-recorded telephone conversations without the consent of the recorded party and that you have broadcast such tape recordings. We caution you that such recording without consent may be in violation of state or federal law. We will contact you under separate cover regarding those complaints.

In summary, it is very important for you to understand that we will review all valid complaints concerning the operation of your Amateur station, and that Commission personnel will again inspect your station. The rules of the Amateur Service are straightforward and easy to understand. To the extent that you do not comply with Commission rules regarding the Amateur Radio Service, then to that extent enforcement action will be taken against your licenses. That enforcement action may include revocation of your station license, suspension of your operator license, a modification proceeding to restrict your operating privileges, or monetary forfeiture.

It is also important for you to understand that if these matters are not resolved, your operator/primary station licenses will not be routinely renewed; but instead will be designated for hearing before an Administrative Law Judge. In such a proceeding, you would have the burden of proof to show that your licenses should be renewed.

I've strung a wire either between two trees while at a city park or
between the house nad a tree for a shortwave antenna

scanner antenna usually wavelengths are 4 meters or less and a 2 meter
ham or 2m/440 antenna will work just fine an antenna for 150mhz
will work for 300, 600 even 900mhz as it is a multiple of the wavelength

the antenna does not have to be exact but hte cloer the better

what you can receive is a function of how much power the target
transmits with. I am not far from KPHX airport but some frequencies I
can receive easier than others.....I would bet that they transmit with
different power outputs... even when I am at the field, some frequencies
are louder than others...

the best place for plane spotting and airport scnner listening at KPHX
is on the roof of either the terminal-3 or terminal-4 garage.

the tower is right next to terminal-3 and they are building a new tower
and tracon facility just east of termina-3

It's 100% Mickey Mouse. I've used the clip perhaps a dozen times in a couple of years of owning the radio, and it's about to break--right at the topmost row of molded dimples. Still in one piece for now, but definitely not trustworthy.

I love this radio and definitely would have paid $5 or $10 more for it to have included a real belt clip.

I appreciate that and will keep it in my back pocket if I can't find another solution. Thing is, I've got a super leather cover for it already that I really like.

However, you have given me the idea of cannibalizing a two-piece clip of some kind, which I hadn't thought of before. Then just the mount would have to fit the holes in the radio, which sounds rather easier than trying to force a non-standard standalone clip onto it.

Thanks for your reply. I appreciate it.

Thanks for the link. I've got the leather part down already, but as I
said in another post I hadn't thought of adapting a two-piece clip to
the radio. I'll have to mull that a bit, but I'm liking it on initial read.

Thanks,

Frequency of operation. And changes thereto.

Concert stadia use scanners to detect emissions from tape recorders and eject people found using them.

Some years back, a US satellite outfit found people using their small dishes in concealed locations and prosecuted them for theft of sevice if they were not subscribers.

In the UK, where TV owners have to pay a license fee, similar means are used to detect working sets from out in the street.

Scanners likely put out rapidly-changing emissions as they scan.

It's the loss, not the length. LMR600 has only 0.781db loss/100 feet, perfectly acceptable.

>I am probabaly going to use 300 ohm twin lead for the lead in, unless >people think it should really be coax.

If you want the least loss (within practical limits - you *don't* want 3" dry nitrogen rigid cable) use ladder line, but the tuner will be a bit much. Even LMR200 is less than 2db loss/100 feet, and RG8 (not 8X) is a hair over 2db.

>communications.

Sorry, but the Communications Act of 1934, As Amended, prohibits
disclosure of anything heard by radio EXCEPT signals broadcast to the
general public, unless you were a party to the conversation. (That
includes ONLY AM, FM and TV broadcast band stations and amateur
radio.) On-line police scanner streams are illegal, discussing what
you heard with your attorney, while privileged, is illegal, discussing
it with your spouse is illegal, etc. (It says "one", so you can
disclose it to your pets all you like, but not with any human being.)

Is the law vigorously enforced? At the moment I can recall only one
instance of enforcement, and that was disclosure of something heard
being discussed on a cell phone.

Will the authorities prohibit reception of public service frequencies?
Right now federal law specifically permits it.

Can a scanner be detected? Yes, if the person detecting it is
sufficiently educated in electronics, it can be detected in a way that
will stand up in court but, just as almost any electronics engineer
can defeat a radar speeding ticket issued by almost any police officer
(at least on paper - in some courts, having been stopped is
overwhelming evidence of guilt), almost any electronics engineer will
be able to defeat a "scanner" ticket. The evidence is far from
"beyond a reasonable doubt". In fact, it's highly doubtful evidence.

I still need to check the 3rd LO injection frequency and I do have to adjust
the LSB / USB BFO injection frequencies.
It appears that the main board for this unit is underneath the convertor /
regulator assembly.
The service manual is not clear on how to dissamble the unit. Can anybody
give me any tips on how to get this thing apart? Do the front and rear
panels need to be removed in order to do this?

Pete

Most of what you hear on the police, fire, aircraft , marine and
amateur bands is not protected and you can tell the old lady about if.
Cell phones, cordless phones and anything encrypted is another story.

From the ECPA of 1986

(4)Section 2511(2) of title 18, United
States Code, is amended by adding at the
end the following:
"(g)it shall not be unlawful under this
chapter or chapter 121 this title for
Post p. 1860 any person---
"(i)to intercept or access an
electronic communication made through
an electronic communication system
that is configured so that such
electronic communication is readily
accessible to the general public;
"(ii) to intercept any radio
communication which is transmitted--

"(I) by any station for the use
of the general public, or that
relates to ships, aircraft, vehicles,
or persons in distress;
"(II)by any governmental, law
enforcement, civil defense, private
land mobile, or public safety
communications system, including
police and fire, readily accessible
to the general public;
"(III) by a station operating on
an authorized frequency within the
bands allocated to the amateur,
citizens band, or general mobile
radio services; or
"(IV) by any marine or
aeronautical communications system;
"(iii) to engage in any conduct
which--
"(I) is prohibited by section 633
47 USC 553. of the Communications Act of 1934;or
"(II) is excepted from the
application of section 705(a) of the
47 USC 605. Communications Act of 1934 by section
705(b) of that Act;
"(iv) to intercept any wire or
electronic communication the
transmission of which is causing
harmful interference to any lawfully
operating station or consumer
electronic equipment, to the extent
necessary to identify the source of
such interference; or
"(v) for other users of the same
frequency to intercept any radio
communication made through a system that
utilizes frequencies monitored by
individuals engaged in the provision or
the use of such system,, if such
communication is not scrambled or
encrypted

Center is negative, shell is positve.
A PITA as I like the shell to be (-) so there
are no arcs if it touches ground.

Terry

Actually the origin of the brand name is equally fascinating. It is,
perhaps, related to the reason why a famous video game of the 1980's
involving a large monkey ended up being known to the English-speaking
world as DONKEY Kong.

"YUPITERU" is "JUPITER" transliterated into Japanese and then (badly) back
into English.

Heh, don't worry. I haven't gone out to buy an adaptor for the ol' girl yet.

I'm fairly impressed by the performance of this older scanner. I live in a populous metropolitan area, made up of two fairly large cities (Minneapolis and St. Paul) and many smaller cities (grand total of the Twin Towns and their 'burbs is almost 3 million now). Hennepin County (the most populous county in the state, which includes the city of Minneapolis) is using trunked radio, but I've heard nothing terribly interesting coming out of there so far on my Pro-95. The St. Paul Police Department is still using UHF and the local state patrol car-to-base is using VHF. Lots of action between just those two entities.

So, having used it for a few nights now, I can say that the Pro-34 works quite well, and picks up everything my Pro-95 and Pro-83 picks up, even with its stock antenna.

I dunno... I may keep it, or I may sell it, but probably not on eBay. I don't have a seller's account there, and don't really care to set one up just to sell one item.

Jackie

I just told this to my teenaged son (who really liked that game when he was
younger) and he said, "I always wondered what that name was all about."

I just assumed they meant it to be "MONKEY Kong," or some such thing.

Hi All,

Long time scanner.............., trunking virgin.

Using Uniden BC785D without the digital card and am using ARC250pro and IDtracker software for computer control.

I have done a normal search and logged the repeater frequencies in the designated trunking band for my area for two days and have come up with 10 frequencies including a couple of "birdie" channels (control?) that seem to be used.
Sometimes I hear both sides of a conversation, other times just one.

I'm struggling to get these to trunk in my scanner.

I have chosen "Motorola type II uhf" as the system for the bank

I am having difficulty trying to figure out the "base frequency" (lowest logged?), and the offset. (I know the step is 12.5khz)

I have loaded them into bank 1, and set the band & frequencies as "trunk", but when I push scan I hear nothing, when I switch over to search there is activity)

Also, how do I figure out the ID's ? (Id tracker just comes up with the frequencies)

Any "un-gobbledeegook" advice appreciated.

Also....Any New Zealand scanners lurking here??

--
Cheers

You will have difficulty decoding these trunking systems on 400MHz in
New Zealand because the trunking system used is MPT1327. Because this
system is not extensively used in the USA, there has been no commercial
imperative to develop or build scanning receivers capable of decoding
this trunking system. There are a limited number of EDACS systems in
main centres in the 800MHz band but they do not have the same saturation
as the MPT1327 trunking system which is marketed by the radio telephone
outlet of our favourite telephone company.

the thing with this software is you need two scanners to track the
conversations
one to listen on the control channel and the other(computer
controllable) to track

but yes they are both good programs

Glenn,

Greetings. I can recommend a few things to you since I live in your
area.

First, there is a local group that is part of Yahoo Groups. I'm not
sure if you are familiar with this or not, but go here and do some
reading:

http://groups.yahoo.com/

The name of the group I'm talking about is SEFLORIDA. Here is a
direct URL for the group:

http://groups.yahoo.com/group/SEFLORIDA/

SEFLORIDA is a group dedicated to South East Florida scanning. It's a
nice bunch of folks. I have done very little posting on the group -
mostly I lurk, but there is a lot to be learned by just reading.

Also, one of the guys on the group makes and sells a book/CD called the South Florida trunking guide. Here is a link for that book:

http://www.scannerdude.com/

I know you said you into scanning airports, but this book covers all the counties in South Florida and is a wealth of info. No, I'm not affiliated with it at all, just a happy customer.

This should give you a pretty good start.

Also, you might want to take a look through Yahoo Groups for your particular scanner type - there are groups set up for particular scanners - for example - I've got a Uniden BCD396T and I've learned a tremendous amount from that group.

Good luck and enjoy. I enjoy listening to the airports myself on occasion.

Here's a few to get you going for starters:

Air Emergency 121.5000
Mil Air Emerg 243.0000
Miami Inter. 118.3000

LoL! No, actually I am a utility worker by trade, and part time
photographer! I use my scanner for both of those duties.

But yeah, it get's beat up a bit. The truth is, the PRO-97 is a bit
too "nice" to have dangling from your belt exposed.

That silver finish scratches much easier... so I prefer to use the
PRO-95 outdoors and at work.

I hope the pictures helped give some other guys ideas on a durable
clip.

Buzzygirl wrote:

Heh, don't worry. I haven't gone out to buy an adaptor for the ol' girl yet.

I'm fairly impressed by the performance of this older scanner. I live in a populous metropolitan area, made up of two fairly large cities (Minneapolis and St. Paul) and many smaller cities (grand total of the Twin Towns and their 'burbs is almost 3 million now). Hennepin County (the most populous county in the state, which includes the city of Minneapolis) is using trunked radio, but I've heard nothing terribly interesting coming out of there so far on my Pro-95. The St. Paul Police Department is still using UHF and the local state patrol car-to-base is using VHF. Lots of action between just those two entities.

So, having used it for a few nights now, I can say that the Pro-34 works quite well, and picks up everything my Pro-95 and Pro-83 picks up, even with its stock antenna.

I dunno... I may keep it, or I may sell it, but probably not on eBay. I don't have a seller's account there, and don't really care to set one up just to sell one item.

Jackie

First sorry is two very similar messages show up. Yahoo barfed on my first post attempt.

You might consider starting a "bug out bag". If some local event, like a train wreck with a hazmat leak, force you to evacuate your home it is nice to be able to evesdrop on what is happening.

I have my old PR034, a Sangen ATS909, a really ancient IC-2AT (Ham HT), and other usefull items, in a water proof bag ready to "deploy". While I have no expectations of a Katrina like event, it never hurts to be prepared. From my personal experience

you aren't going to get very much out old scanners/receivers,
so for me, it makes more sense to keep them for backups,
or for real emergencies. I don't keep batteries in the bag,
they are kept in the fridge in an air tight container and changed
out every other year.

Oh, keep a list of usefull(!!current!!) freqs.

Terry

Excellent ideas; thanks for the reminder. I've been telling myself that I need to set up a "go" bag for some time now.

I have enough radio-related items to fill a bug-out bag, and then some. All I really need is to get a decent waterproof backpack and put the stuff I have into it. Need to buy some more batteries though; lots more batteries. Perhaps a portable power supply as well.

We don't have any seismic or even many weather-related emergencies where I live, but I do live one block east of a busy railroad track, and who knows what those cars are carrying besides multiple graffiti tags.

The Pro-34 looks kinda bride-of-Frankensteinish compared to my other rigs. Cool in a retro way, but not as cool as the 1930's Philco cathedral radio that's also next to me. I like the juxtaposition of these two retro-rigs, one on either side of me as I'm typing this. :-)

Here we are in this fine HiTECK society, and with all this great New Trucking radio systems are not worth a shit in a real emergency like in the Big Easy, and the police can not talk anywhere. Car to Car does not work either.
Hell CB would work better or something. All police should have a backup simplex Radio to use if this happens again as at least they could talk if the repeater went down. I bet right now in most areas we live if the main base went out all communications would go to crap..
Sometimes keep it simple really works.

Well, it doesn't seem too iffy in Virginia and D.C. They use devices (VG2
detectors) that pick up local oscillator frequencies in radar detectors, and
have no problem using it for legal evidence...

If you can stand the Ot political BS,
<http://groups.google.com/group/misc.survivalism>
can be a usefull, though frustrating NG.

Whne cooler weahter gets here I am going to put a R390 into service.
The waste heat will be usefull, and my wife's cat loves the heated top.

My first SWs, a Zenith and a Heath GR64, are so deaf compared to
anyh o fmy modern SW, even when compared to the Grundig "emergency"
FR200, that I really ought to toss them. But like my first decent CB
HT, a
Midland 13-110H 2Ch (100mW!), I just can't bring myself to gfet rid of
them.
Too many memories. While school taught me some things, trying to get a
"better" antenna, to listen and talk further really did me a favour and
got me

started in electronics.

I'm a bit surprised by that, but as they've put the old MVT-7100 back
into production, I guess they've no spare manufacturing capacity.
Still there are plenty of other makes out there with some excellent new
model scanners.
Regards Mike.

3517. Ideal computer / scanner combination?

Newsgroup: rec.radio.scanner
Date: 2005-09-01 16:24:23 UTC
From: Alan Dye <alandye@pacbell.net>
Message-ID: <XWFRe.261$pt.132@newssvr27.news.prodigy.net>
Source record: 12229

I've been looking to setup the ideal computer/software/scanner combo here in my shack to ferret out what frequencies are actively in use in my area based on Percon's data from the FCC. Seems a lot of people license frequencies, and then don't use them a lot.

Based on my analysis, there should be nearly 3,000 active frequencies in my reception area -- a tiny corner on the south edge of San Francisco and San Mateo counties near the coast -- but inital programming of several hundred into my 785D shows limited use.

I'd like to use the computer to control the scanner and collect hits and record the audio of certain channels so I can review the results in my limited hobby time in the evenings after work.

I've been using a laptop with XP, Scancat Gold/SE and a Bearcat 785D, but it's been rough going, mostly due to the software. Scancat comes highly recommended, but the interface for importing is quirky and difficult, and the manual is impossible. The software seems to have been originally designed for something else. The trunking capture module is useable, and I do use it to collect talkgroup activity on the SF DECS Trunked system, but for conventional use it is unpleasant at best.

It might be a combination of the radio and the scanner.

What would be the best combination of hardware (scanner) and software to monitor and eavesdrop on both conventional and trunked scanning and collect both hits and audio?

Alan

p.s. also any recommendations on process, how you'd go about covering all 3000 frequencies in the shortest period of time while maintaining the maximum amount of information collection.

detecting people " receiving " signals is a time honored tradition
and process dating from before WWII to present times. besides the
" detector detectors " mentioned below , cable companies have been
finding service theft cases from listening to their " local
oscillators " and making legal cases against them. if those people
are listening to channels (indicated by the radiated local
oscillator freqs) that their converter isn't authorized to receive ,
then that constitutes theft of service conditions. (the cable company
sends out signals that normally " locks out " those channels)
since there are slight variations in each piece of equipment, the
cable company can tell how many converters you have on-line too .
way back in WWII, radio receivers were illegal in England. trucks
with directional receiving equipment drove through the streets
locating receivers (of spies , they hoped) via their local
oscillators.
Al, all the equipment you mention above, transmits (inadvertently
) LO type signals on " completely " different freqs and of differing
types, that signal their presence. equipment commonly exists that
can locate most of them from several blocks to several miles distant.
ANY well made piece of government RF surveillance equipment (WJ
blk boxes for instance) has been designed to do just " exactly " that
for decades.
modern types are totally computer automated and can " describe a local
RF environment " (scan everything and project the type and number of

ALL RF devices present within a certain radius) in just minutes. the computers can analyze " lo " signals and project (based on known computer model algorithms) the exact types and numbers of equipment present. they can (and do) scan for protracted periods of time and constantly update the report status.

I have a home made (new voodoo technology for civilians) ferro resonant core ULF sensor (parts and sample circuits available from this site http://www.stormwise.com/vlf1574projects.htm)
) set up on the roof rack of my SUV that can " hear " the RF radiation " clicks " of a new memorex shirt pocket solid state dictation / voice memo machine , a block and half down the street. the so called signal from this device is " extremely " small but easily detectable using the new technology (government has had them for decades) ferro rods . (completely NEW type of resonant circuits as compared to past RF devices . THESE need NO caps or circuitry as we used to know it, they are " self resonant " and the " circuits " are just pick off coils < like the 2 turn tap in a pi-net > to extract the signals these rods accumulate)

I sure wouldn't say $50 to $72 is high for these... that was a $150 to $200 scanner on Ebay 3-5 years ago when cell monitoring was popular. If you can get a nice one for around current Ebay values, then go for it.

Hi Alan, I have the same rig as you.
I program the 785D to autostore freqs from a search range into a "clean"
bank while I'm away at work.
When I get back I then set it scannng those found freqs. I use ARC250pro for
laptop control and upload the new freqs.
I set it to log and record all conversations in my fresh bank (I usually do
this then go off to work or where ever for at least 7 - 8 hours to ensure a
good sample of conversation)
When I finally sit down to listen, I have a days worth of conversation that
I can listen to in about half an hour, and figure out who belongs where, (or
use a freq database if they are still obscure) log those details to
ARC250pro then download all the new information to the scanner.
As there are no trunked set up here I have not dealt with that side.

From the Chicago Sun-Times:

http://www.suntimes.com/output/feder/cst-fin-feder01.html

On [Dahl's] (105.9) afternoon show Tuesday, he mused about creating a drink inspired by
reports of "floating corpses" in New Orleans. And on his Web log Wednesday, he elaborated.

"Okay, so maybe now I feel a little guilty that I wanted to see New Orleans completely
covered in water," Dahl wrote. "You have to admit, though, that the helicopter rescues
and the looting make for some interesting TV. I guess I understand the looting for food
and water. If I were flooded out of my home, I think I would crave a 32-ounce bottle of
Dasani water and a can of SpaghettiOs myself. But trying on clothes while standing knee
deep in floodwater? That seems a bit much. I'm still waiting on the floating corpses.

"To that end, I have sent away for five pounds of Chocolate Babies to act as 'floaters' in
the new drink I'll be inventing this week: The Floating Corpse. ... I'm thinking Creme de
Cacao, Kahlua, some rum, maybe a little cream and a floating Chocolate Baby.

"Of course, I'll fine tune that and come up with a 'secret ingredient' or two, but that's the
general cocktail framework that I'm thinking of presently. Sort of a Mudslide, without the
mud. More of a Muddy Waters.

"Also, just for the record, the Chocolate Baby thing is not meant to be racist in any way.
Yes, there have been a lot of African Americans on TV being rescued and the like, but they
don't make anything other than Chocolate Babies or Licorice Babies, and it seemed to me
that chocolate was less offensive. It's a judgment call. If they made Strawberry Babies, I
would have ordered five pounds of them too."

I nearly peed myself folks.... ;)

Then you ether live in the middle of a desert or on the planes with
nothing from you to the airport!!! Or on a mountain overlooking the
airport. I have lived 12.7 miles away from KPIT Pittsburgh International
and before I put up a Scantenna the only thing I could hear was the
planes, after going up 45 feet I now hear the tower. While in the U.S.
Army as a gun ship driver for 24 years I could never hear the tower on a
hand held if I was 4 or more miles away with out going up on a building
or being higher then the buildings I was near. And yes I am a fountain of
information :-)

The information you about to read is far from conjecture, the question
is what to do about it, if anything?

over 10 million listeners heard on Coast To Coast a
very deadly serious discussion on a tecnhology that
has been around for over 30 years. It's imperative
that all become aware of this and know that the
"Perfect Storm" isn't always created by Mother Nature.

See http://www.coasttocoastam.com
http://www.weatherwars.info/Katrina.htm
http://www.enterprisemission.com/weblog/weblog.htm
http://www.kathleenkeating.com/stevens012505.mp3

I'm just one of many modern day "Minute Men" trying to
warn of this impending catastrophe. I say this to the
doubting Thomass, I bet you guys would have shot Paul
Revere when he rode to warn that "The British Were
Coming" British, what the hell is this guy talking
about, what British, suddenly a column of RedCoats
appear and your dead! This is not in the mainstream
because it will create a terrible panic, I don't know
how this can be managed without doing that, please
take that in consideration.

And now last nights guest, another "wacko" [b](To the
people of LA.)I would suspect if you read this whole
information you people of LA. are going to be very
angry and demand some answers and accountability, it's
the damned least they can do, since they let it
happen![/b]
[b]Charles Ostman

Senior Fellow - Institute for Global Futures

Charles Ostman has spent 25+ years working in the
fields of electronics, physics, computers, artificial
intelligence, and most recently, various aspects of
applied and theoretical Nanotechnology. Starting with
eight years at Lawrence Berkeley Laboratory at the
University of California, Berkeley, he has since
worked in a variety of private industry technology
laboratories and development facilities. He currently
is a member of the science advisory board of
Nanothinc, a San Francisco based privately held
Nanotechnology focus and development group, and a

senior fellow of the Institute for Global Futures. He is also currently science editor of Mondo 2000, a Berkeley based, worldwide circulated technology and future culture magazine, and technical editor/author for Midnight Engineering, a technical trade journal which addresses the entrepreneurial engineering community. He has been published in a number of books, including CyberLife and Secrets. His primary interests are in the development of the next generation of self evolving computing systems, artificial life forms, Nanotechnology, and virtual reality as an art medium. He also worked at Los Alamos Laboratory[/b]

I shared his credentials,because I find them respectable and I dare someone to call him a "Nut Job" (Again to the Doubting Thomass,)I'm just curious are any of you familiar with the tale "The Emperors New Clothes"? because quite frankly guys, the Emperor is stark naked, and you guys think he's fully clothed! lol

Guess what? He is now the fourth person/expert to join the other "Cranks,tin hats,wackos,nut jobs" who poses a "strong theory" that weather manipulation is real, and it's being used for "geopolotical purposes" He cites this article in "India Daily" which is like India's version of the Wall Street Journal, I.E. very respected in their country "Methods of Artificial Weather Manipulation(AWM) help agriculture, devastate the enemy and control the world economy http://www.indiadaily.com/editorial/2070.asp He also made mention to how Russia offered publicly to help China steer away a Typhoon. Don't believe it? Just do a search for it, it was in the news and I remember the headline, and I couldn't believe what I was reading!

Yep he was also interviewed on C 2 C. Funny thing is George Noory the host himself sides with the Doubters, ironically, he has been quoted as saying "Why can't we just say it's Mother Nature and leave it at that?" He has a hard time believing this, and even got a fax/email from a listener that said "Your guests, who say this, our all nuts, come on weather manipulation, it's impossible" Response from Oster was, i'm not saying it, the data is available just search for the information. They mentioned "Oil Storm" the FX movie http://www.fxnetworks.com/shows/originals/oilstorm/main.html and how the scenario is now playing itself out,he postured that perhaps the movie was a preview of things to come? One thing I have to ask what are the Odds of a "Hurricane" hitting Port Fourchon, dead

on,destroying N.O. and this close to Labor Day, as was in the movie? They have to be astronomical! You have to admit that's a little too damned coincidental!

He made a reference to HAARP and how they, the U.S. military found that not only can it be used for LF com with submarines, but it can create heat in the atmosphere,which can plausibly heat up storm systems. He also said that there is a very good chance this method has been perfected. I did a search for HAARP and russia and look what I found on the web site for "Federation Of American Scientists", (Again to the Doubters) more nut jobs, right?

"Title: Russian parliament concerned about US plans to develop new weapon"
Document Number: FBIS-SOV-2002-0808
Document Date: 08 Aug 2002
Division: Russia, North America
Subdivision: Russia, United States
Sourceline: CEP20020808000087 Moscow Interfax in English 1009 GMT 8 Aug 02
Citysource: Moscow Interfax
Language: English"

[FBIS Transcribed Text] MOSCOW. Aug 8 (Interfax) - The Russian State
Duma has expressed concern about the United States' program to develop a qualitatively new type of weapon.

"Under the High Frequency Active Auroral Research Program (HAARP), the
U.S. is creating new integral geophysical weapons that may influence the
near-Earth medium with high-frequency radio waves," the State Duma said
in an appeal circulated on Thursday.
"The significance of this qualitative leap could be compared to the
transition from cold steel to fire arms, or from conventional weapons to
nuclear weapons. This new type of weapons differs from previous types in
that the near-Earth medium becomes at once an object of direct influence
and its component.
These conclusions were made by the commission of the State Duma's
international affairs and defense committees, the statement reads.
The committees reported that the U.S. is planning

to test three
facilities of this kind. One of them is located on the
military testing
ground in Alaska and its full-scale tests are to begin
in early 2003. The
second one is in Greenland and the third one in
Norway.
"When these facilities are launched into space from
Norway, Alsaka and
Greenland, a closed contour will be created with a
truly fantastic
integral potential for influencing the near-Earth
medium," the State Duma
said.
The U.S. plans to carry out large-scale scientific
experiments, under
the HAARP program, and not controlled by the global
community, will
create weapons capable of breaking radio communication
lines and
equipment installed on spaceships and rockets, provoke
serious accidents
in electricity networks and in oil and gas pipelines
and have a negative
impact on the mental health of people populating
entire regions, the
deputies said.
They demanded that an international ban be put on
such large-scale
geophysical experiments.
The appeal, signed by 90 deputies, has been sent to
President Vladimir
Putin, to the United Nations and other international
organizations, to
the parliaments and leaders of the UN member
countries, to the scientific
public and to mass media outlets.
Among those who signed the appeal are Tatyana
Astrakhankina, Nikolai
Kharitonov, Yegor Ligachev, Sergei Reshulsky, Vitaly
Sevastyanov, Viktor
Cherepkov, Valentin Zorkaltsev and Alexei Mitrofanov.

[Description of Source: Moscow Interfax in English --
non-government
information agency known for its aggressive reporting,
extensive economic
coverage, and good coverage of Russia's regions]
http://www.fas.org/irp/program/collect/haarp-duma.htm

Apparently this "E.M. Scalar technology can also influence fault lines "

"MOSCOW, Mar 05, 2002 (Itar-Tass via COMTEX) -- The earthquake that shook Central and South Asia last Sunday might have been triggered by super-modern weapons intensively used by the US aviation in the seismically dangerous areas of Afghanistan, a source in a Moscow geophysical research center has told Itar-Tass on condition of anonymity. He said the supposition was confirmed by the unusually strong and lengthy tremors (up to one minute) that originated in the Hindu Kush Mountains and spread onto Afghanistan, Tajikistan, Uzbekistan, Pakistan and India. Even old residents of Kabul do not remember an earthquake similar to the Sunday tremor that exceeded 6 points on the Richter scale."

On Sunday, March 3, the area in which the US is fighting Afganistan Muslim Al-Aqeda forces was suddenly hit by an historically unusual 7.2 Richter Scale earthquake. Let us quickly examine this news report:

No one is saying these storms were created, only that they were taken control of. If you Mensa members don't want to even explore the plausability then fine, but the data and evidence is there, and soon you will be in the minority. A caller brought up the so-called hoax "Report From Iron Mountain" from the 60's that says there is just no chance for peace and the only way to control the population is continue to wage horrific wars, with horrific technology. Hell there is even a U.N. treaty that forbids weather modification, why the hell would you have a treaty for something that is impossible? "NEWS BRIEF: "United States and Other World Powers Should Outlaw Tampering With Weather for Use as War Weapon", Editorial by Senator Claiborne Pell, D- Rhode Island, The Providence Journal Bulletin, 1975.

"The U.S. and other world powers should sign a treaty to outlaw the tampering with weather as an instrument of war. It may seem farfetched to think of using weather as a weapon -- but I'm convinced that the U.S. did, in fact, use rainmaking techniques as a weapon of war in Southeast Asia."

Let us stop right here and now and digest just what Senator Claiborne Pell has told us. He said that the United States used Weather as a Weapon during the Vietnam War. We fought the Vietnam War from 1965-74 in a large capacity. Using Weather Weapons in the early

1970's would fit the time frame with which we are familiar.

The U.N. treaty we discussed above was passed one year after this article appeared quoting Senator Pell. Now, let us hear some more from Senator Pell.

"We need a treaty now to prevent such actions -- before the military leaders of the world start directing storms, manipulating climates, and inducing earthquakes against their enemies. The basic idea of environmental warfare is simple -- if a nation can learn to trigger natural events it can inflict terrible damage on an enemy through rainfall, flooding, tidal waves, earthquakes, and even climate changes that could devastate an enemy nation's agriculture." [Ibid.] "

An Interesting point Oster made was, why is the response from the Govt. so slow, and late? He theorizes that they the Govt. know this was a "Weather Attack" and that if they had a response team ready to go ala post 9-11 preparedness, I.E. homeland security etc. That they would have to explain themselves, or something like that, I only wish you doubting Thomases could have listened to the interview. So I suppose when Kennedy said "Man will someday go to the moon" you guys would have said "He's a crackpot" well unless your one of those wackos who believes, we never went, guess what not only was it possbile but we went! So are you Mensas ready to say, hmm maybe there is something to this Weather Wars after all, or do we just wait for the next volly and hope another city like N.O. doesn't get decimated?

BTW no one is going to convince me that Katrina was a Cat 3, I have never seen a Cat 3 do so much damage. Are people that naive to think that we and the Russians and Chinese don't control these types of W.M.D.? The only thing is the Russians have had the money from the U.S. to have their brillian scientists work on it a much longer time and perfect it better! If people doubt all this then,the shouldn't be too surprised what comes next! "Truth Is Stranger Than Fiction" and that truth is going bite us all in the ass! (This is to the detractors of the theory of "Peak Oil" http://www.peakol.com Why is this so important to P.O.? because as you can see it's sped up the scenario! Another interesting point, why if we are at peace with Russia we have refused disaster help from them? Others are asking similar questions,

http://www.libertypost.org/cgi-bin/readart.cgi?ArtNum=107231
but in all fairness Oster brought that up, not me, but
it makes you wonder. I suspect the cold war never
ended, it just shifted to controling "Mother Nature"
As the commerical used to say "It's not nice to fool
with Mother Nature" :)
God Help Us!

Funny thing is George Noory the host himself sides with the Doubters, ironically, he has been quoted as saying "Why can't we just say it's Mother Nature and leave it at that?" He has a hard time believing this, and even got a fax/email from a listener that said "Your guests, who say this, our all nuts, come on weather manipulation, it's impossible" Response from Oster was, i'm not saying it, the data is available just search for the information. They mentioned "Oil Storm" the FX movie http://www.fxnetworks.com/shows/originals/oilstorm/main.html and how the scenario is now playing itself out,he postured that perhaps the movie was a preview of things to come? One thing I have to ask what are the Odds of a "Hurricane" hitting Port Fourchon, dead

on,destroying N.O. and this close to Labor Day, as was in the movie? They have to be astronomical! You have to admit that's a little too damned coincidental!

He made a reference to HAARP and how they, the U.S. military found that not only can it be used for LF com with submarines, but it can create heat in the atmosphere,which can plausibly heat up storm systems. He also said that there is a very good chance this method has been perfected. I did a search for HAARP and russia and look what I found on the web site for "Federation Of American Scientists", (Again to the Doubters) more nut jobs, right?

"Title: Russian parliament concerned about US plans to develop new weapon"
Document Number: FBIS-SOV-2002-0808
Document Date: 08 Aug 2002
Division: Russia, North America
Subdivision: Russia, United States
Sourceline: CEP20020808000087 Moscow Interfax in English 1009 GMT 8 Aug 02
Citysource: Moscow Interfax
Language: English"

[FBIS Transcribed Text] MOSCOW. Aug 8 (Interfax) - The Russian State
Duma has expressed concern about the United States' program to develop a qualitatively new type of weapon.

"Under the High Frequency Active Auroral Research Program (HAARP), the
U.S. is creating new integral geophysical weapons that may influence the
near-Earth medium with high-frequency radio waves," the State Duma said
in an appeal circulated on Thursday.
"The significance of this qualitative leap could be compared to the
transition from cold steel to fire arms, or from conventional weapons to
nuclear weapons. This new type of weapons differs from previous types in
that the near-Earth medium becomes at once an object of direct influence
and its component.
These conclusions were made by the commission of the State Duma's
international affairs and defense committees, the statement reads.
The committees reported that the U.S. is planning

to test three
facilities of this kind. One of them is located on the
military testing
ground in Alaska and its full-scale tests are to begin
in early 2003. The
second one is in Greenland and the third one in
Norway.
"When these facilities are launched into space from
Norway, Alsaka and
Greenland, a closed contour will be created with a
truly fantastic
integral potential for influencing the near-Earth
medium," the State Duma
said.
The U.S. plans to carry out large-scale scientific
experiments, under
the HAARP program, and not controlled by the global
community, will
create weapons capable of breaking radio communication
lines and
equipment installed on spaceships and rockets, provoke
serious accidents
in electricity networks and in oil and gas pipelines
and have a negative
impact on the mental health of people populating
entire regions, the
deputies said.
They demanded that an international ban be put on
such large-scale
geophysical experiments.
The appeal, signed by 90 deputies, has been sent to
President Vladimir
Putin, to the United Nations and other international
organizations, to
the parliaments and leaders of the UN member
countries, to the scientific
public and to mass media outlets.
Among those who signed the appeal are Tatyana
Astrakhankina, Nikolai
Kharitonov, Yegor Ligachev, Sergei Reshulsky, Vitaly
Sevastyanov, Viktor
Cherepkov, Valentin Zorkaltsev and Alexei Mitrofanov.

[Description of Source: Moscow Interfax in English --
non-government
information agency known for its aggressive reporting,
extensive economic
coverage, and good coverage of Russia's regions]
http://www.fas.org/irp/program/collect/haarp-duma.htm

Apparently this "E.M. Scalar technology can also influence fault lines "

"MOSCOW, Mar 05, 2002 (Itar-Tass via COMTEX) -- The earthquake that shook Central and South Asia last Sunday might have been triggered by super-modern weapons intensively used by the US aviation in the seismically dangerous areas of Afghanistan, a source in a Moscow geophysical research center has told Itar-Tass on condition of anonymity. He said the supposition was confirmed by the unusually strong and lengthy tremors (up to one minute) that originated in the Hindu Kush Mountains and spread onto Afghanistan, Tajikistan, Uzbekistan, Pakistan and India. Even old residents of Kabul do not remember an earthquake similar to the Sunday tremor that exceeded 6 points on the Richter scale."

On Sunday, March 3, the area in which the US is fighting Afganistan Muslim Al-Aqeda forces was suddenly hit by an historically unusual 7.2 Richter Scale earthquake. Let us quickly examine this news report:

No one is saying these storms were created, only that they were taken control of. If you Mensa members don't want to even explore the plausability then fine, but the data and evidence is there, and soon you will be in the minority. A caller brought up the so-called hoax "Report From Iron Mountain" from the 60's that says there is just no chance for peace and the only way to control the population is continue to wage horrific wars, with horrific technology. Hell there is even a U.N. treaty that forbids weather modification, why the hell would you have a treaty for something that is impossible? "NEWS BRIEF: "United States and Other World Powers Should Outlaw Tampering With Weather for Use as War Weapon", Editorial by Senator Claiborne Pell, D- Rhode Island, The Providence Journal Bulletin, 1975.

"The U.S. and other world powers should sign a treaty to outlaw the tampering with weather as an instrument of war. It may seem farfetched to think of using weather as a weapon -- but I'm convinced that the U.S. did, in fact, use rainmaking techniques as a weapon of war in Southeast Asia."

Let us stop right here and now and digest just what Senator Claiborne Pell has told us. He said that the United States used Weather as a Weapon during the Vietnam War. We fought the Vietnam War from 1965-74 in a large capacity. Using Weather Weapons in the early

1970's would fit the time frame with which we are familiar.

The U.N. treaty we discussed above was passed one year after this article appeared quoting Senator Pell. Now, let us hear some more from Senator Pell.

"We need a treaty now to prevent such actions -- before the military leaders of the world start directing storms, manipulating climates, and inducing earthquakes against their enemies. The basic idea of environmental warfare is simple -- if a nation can learn to trigger natural events it can inflict terrible damage on an enemy through rainfall, flooding, tidal waves, earthquakes, and even climate changes that could devastate an enemy nation's agriculture." [Ibid.] "

An Interesting point Oster made was, why is the response from the Govt. so slow, and late? He theorizes that they the Govt. know this was a "Weather Attack" and that if they had a response team ready to go ala post 9-11 preparedness, I.E. homeland security etc. That they would have to explain themselves, or something like that, I only wish you doubting Thomases could have listened to the interview. So I suppose when Kennedy said "Man will someday go to the moon" you guys would have said "He's a crackpot" well unless your one of those wackos who believes, we never went, guess what not only was it possbile but we went! So are you Mensas ready to say, hmm maybe there is something to this Weather Wars after all, or do we just wait for the next volly and hope another city like N.O. doesn't get decimated?

BTW no one is going to convince me that Katrina was a Cat 3, I have never seen a Cat 3 do so much damage. Are people that naive to think that we and the Russians and Chinese don't control these types of W.M.D.? The only thing is the Russians have had the money from the U.S. to have their brillian scientists work on it a much longer time and perfect it better! If people doubt all this then,the shouldn't be too surprised what comes next! "Truth Is Stranger Than Fiction" and that truth is going bite us all in the ass! (This is to the detractors of the theory of "Peak Oil" http://www.peakoil.com Why is this so important to P.O.? because as you can see it's sped up the scenario! Another interesting point, why if we are at peace with Russia we have refused disaster help from them? Others are asking similar questions,

http://www.libertypost.org/cgi-bin/readart.cgi?ArtNum=107231
but in all fairness Oster brought that up, not me, but
it makes you wonder. I suspect the cold war never
ended, it just shifted to controling "Mother Nature"
As the commerical used to say "It's not nice to fool
with Mother Nature" :)
God Help Us!

WOW - I'd like to have had what you've been smoking - back when I "was"
smoking. What a blast. The reason that guy's paperwork probably is in
another country's paper is because no one in their right mind would print
that bull shit here - except maybe the Enquirer, Globe or one of the other
"wipe your ass" newspapers.

Being this is in a radio related group - I'll give it a 10+ on the scale of
1-10 - in noise.

Next you'll be telling us Jesus Christ is here with us, Superman truly does
exist and so on.

jm

>information :-)

Read George's claim again - he didn't say "he is not going to hear
anything transmitted from the ground", he said "he is not going to
hear anythang". I said that I hear many air band signals. Unless you
live far from civilization, you will too - with a rubber ducky.

>have no problem using it for legal evidence...

Since that's an oscillator on the radar frequency, there's not much
doubt.

Since you can't be forced to testify against yourself (meaning that
anything you have can't be seized and used against you without due
process), they'll have a slim chance of proving that, since your local
oscillator was running at 140.4 MHz, you were receiving 155.85 MHz.

All it takes is one case lost in the highest court in the state, and
the whole picture changes. It used to be normal in NY for you to
appear once to set a trial date and a second time to be tried. These
days, if the court isn't ready on your first ordered appearance, and
you know enough to ask for a dismissal, the case is dismissed. All it
took was 1 case. But someone has to bring that case.

>then that constitutes theft of service conditions.

Since 1) you're modifying THEIR equipment, 2) their business is charging for delivered signals and 3) they know the specs of their equipment, they can prove their case beyond a reasonable doubt.

Since the police don't know the IF of your scanner, unless they seize it, they have a much rougher job of proving a case beyond reasonable doubt.

> Al, all the equipment you mention above, transmits (inadvertently
>) LO type signals on " completely " different freqs and of differing
>types, that signal their presence. equipment commonly exists that
>can locate most of them from several blocks to several miles distant.
>ANY well made piece of government RF surveillance equipment (WJ
>blk boxes for instance) has been designed to do just " exactly " that
>for decades.

But very little equipment can determine the first IF of your receiver without the person doing the detection having the receiver in his hands, and to get it he needs probable cause to get a warrant, which he can't have until he has the scanner in his hands.

It's a case of "we know he did it, but we can't prove it in court unless we violate the law to get evidence". And, in this case, not even "know" - more like "strongly suspect".
.
>they can (and do) scan for protracted periods of time and
>constantly update the report status.

Which does no good against scanners in cars doing 65 on an interstate.

>I have a home made (new voodoo technology for civilians) ferro
>resonant core ULF sensor (parts and sample circuits available from
>this site http://www.stormwise.com/vlf1574projects.htm)
>) set up on the roof rack of my SUV that can " hear " the RF

>as compared to past RF devices . THESE need NO caps or circuitry
>as we used to know it, they are " self resonant " and the " circuits "
>are just pick off coils < like the 2 turn tap in a pi-net > to
>extract the signals these rods accumulate)

Now use one of them on an interstate to prove that *my* scanner was running its LO at F1 and its IF is F2 - while I'm doing 65 and you have to be non-obvious. Sit behind me with some weird looking device sitting on your dash and my wife (if I'm listening to the scanner she's driving) will probably slow down to 30 or less, and pull onto the shoulder if you don't get off her tail - AFTER she stands on the brake pedal and puts holes in your radiator, in an accident you're fully responsible for. She just loves tailgaters, and more so if they're MOS. Anal sphincters come in all sizes - even uniformed. I know - I used to have some working for me - not for long, just until I could pawn them off on someone else.

Heck, I can defeat most "radar" tickets, and courts accept them as "proven" technology. It's a lot easier to defeat state of the art - just show that it's not technology, it's voodoo, and the court will be very uncomfortable. (Most judges are Luddites. Those who aren't, and I've only met 2 in all the years I've been in courts, would laugh a "scanner in a car" case out of their courts.)

Oh, if you ever do get a ticket for a scanner in your car, ask the officer, after he finishes testifying, what it was that first made him suspect that you had an illegal scanner in your car. Unless he stopped you for something else, and you were stupid enough to leave your scanner on, he has no case. (My red [police only, in NY] fireball is usually between the front seats of my car - never know when you might need it. I've only been asked once why I had it - and it was on the roof, lit and turning. You can't see it when I'm driving unless you stop me and come over to my car, so there's no PC to stop me for having it.)

Of course none of this holds true in "the cop stopped you - that'll cost you $150" courts, but real courts tend to follow the law, and PC and proof are part of it.

>Perhaps a portable power supply as well.

A 12-volt power supply and a car cord for every piece of equipment (or
enough universal cords to run anything you might want to run
simultaneously).

Alternatively, an inverter and AC wall warts for everything.

Make sure that you have every cable, adapter, antenna, mount,
programming CD, etc., in that bag too. It's not really great to get
somewhere only to realize that you just need the SMA-BNC adapter (or
something else Radio Shack never carried) to use the only scanner that
can receive xxx - and you don't have one with you. It's also nice if
the bag has a pocket you can keep paperwork safe in.

That's implementation-dependent. The systems can be set up with TACs, so they can talk without repeaters.

You can give a man water, but if he's too stupid to drink, he'll still die of thirst.

>collect both hits and audio?

Any Uniden scanner that covers the frequencies and modes you want to
monitor for hardware.

For software, the protocol of most Uniden scanners is available, so
why don't you write software that does exactly what you want. Nothing
you find on the web, or buy, will be that close to what you need.

>p.s. also any recommendations on process, how you'd go about covering
>all 3000 frequencies in the shortest period of time while maintaining
>the maximum amount of information collection.

Keep scanning them all and record the hits, without duplicates. (You
could store them to a database, using the frequency as a
non-duplicable key.) You might also want to record the length of time
the scanner stayed on that frequency.

>I found this on e-bay, saying it can pick up all new digital phones, digital
>police radio etc, but surely it's a scam isn't it ???

It just claims to be a digital scanner - it doesn't say anything about picking up digital phones. Of course it also claims to be UHF and go *up to* 47.999999 MHz - 47 isn't UHF, and there's no channel on that frequency (there are no countries that operate on 1 Hz channelization). So, although the digital claim may not be phony, the rest of it is as phony as a 33-1/3 cent bill.

>I thought the new police radio's codes were uncrackable !

Encryption is practically unbreakable. (It's breakable, but do you really want to spend a million dollars for the computer to do it and wait 5 years for the results? The key changes faster than that.) But there are many *real* scanners on the market today that receive digital signals - Radio Shack Pro-96, Uniden 296, Uniden 396, etc.

Please forgive my rant.... but it is worth thinking about - even if you find yourself disagreeing.

Question is - is were they set up as such? One would like to think so, but ..... And the next question is - if they were - then what could be the reason for "not" using them? A likely reason is all battery power is exhausted - and that could be the case if the only radios left were the ones being carried by the officers at the time. All the rest "may" have been destroyed. With no power, they couldn't recharge any if they had a charger left to do so - at all. The only building(s) that I'm aware of which had anything left to it with a generator - was "a" hospital or so and the arena. They could probably have "tried" to recharge the radios there - IF they had a charger - which again - was probably gone. There ARE reasons why no radios were left behind or now usable. Lets face it, this hurricane put them back a few hundred if not a thousand years.

Instead of blaming people, we ALL need to sit down and re-evaluate the situation before the next one comes - just what "would" we do - for ourselves, our family. In any event like this - you LEARN. Just like 911 - the city of New York's Public Service radios were swamped beyond use. The system failed. They know that now and are "hopefully" rectifying the situation. Yes, it is easy as hell to point fingers, fact is - it does no good - it only hampers efforts. Maybe there are some to be held accountable, but now is not the time. This was one hell of a wake up call for the U.S. As a reporter said on TV, recently we've been hearing preparedness for Terrorists attacks. This could be likened to a small to medium scale nuclear attack. Sad to say, but for a catastrophic disaster like this, it will ALWAYS catch people off guard and unprepared. The system is just

overwhelmed. There are only so many hospital beds, medical equipment, medicines, doctors, nurses, medics, etc. Also, people - individuals need to start keeping some sort of supplies together to rely on to get by. The American Red Cross offers a check list of those items. They suggest like a week's worth. Were this done, much of this current situation could be eased - at least for those stranded - still waiting to be rescued. Second, many folks just plain do not listen to EMA guides. When told to evacuate, many choose not to. You can't blame the EMA officials for that. Folks take their lives in their own hands when they refuse to leave an area. IF they couldn't, that is one thing, but if they had a choice and didn't, then they held their lives in their own hands - to an extent. Another thing, MORE people need to get involved in community service - such as Red Cross workers, Salvation Army, Ham and yes, CB for Comms (recreate SEAT REACT - if not active), whatever. In some areas - as Volunteer EMS or Fire. Many areas are hurting for volunteers in these fields and lets face it, in a disaster, they are going to be hard pressed to do any good. There was a program started here and I believe it was a "national" program - designed to train common folks in basic techniques to assist the Fire/EMS folks. I can't speak for other areas, but here - no one applied for this "free" training. It was not "fire fighting or saving lives" but just basic stuff that a fire department or EMS would be called to - that folks could do in a disaster to help alleviate the situation until help can arrive. This is sad... this is a good reason the system is overwhelmed. If one person in every family learned some basic techniques, or went so far as to be more thoroughly trained in some sort of rescue or relief effort training, just think of the many more people we'd have available to help.

Lawlessness is foolishness. Taking food, water/drinks, medicines, diapers - though I don't condone stealing/looting, those are "survival" items. IF that store was to be re-opened, the majority of that stuff left - would be thrown away anyway and written off as a tax loss. But to steal TVs - Stereos which operated off of AC (only) when there is none - makes no sense, most probably is ruined anyway. They sure can't haul it on a bus with them. To take "small" radios or battery operated items to listen to news - that too "is" understandable. Again, I'm not condoning theft, just the "legitimate" use of the items. To shoot at the very people coming to rescue you.... that can not and should not be tolerated. We who are working to rescue others who "desire" help - shouldn't have to be put into that situation. Those who do such things have no place in our society. "I" would issue "martial law" immediately to deal with it. That is my only suggestion - not blame. It is understandable they are upset, but those actions do no one any good. I say "we" who are working only because I've been in this sort of operation and involved in EMA locally - but do not take any credit whatsoever for "this" event. I'm in an area far removed from the current event.

Yes, there are a HUGE amount of problems here. With cooperation, help, money, it will start to take shape. It won't be easy, and it sure won't be as quickly as it happened. The whole country is going to wear this badge. ALL of those people have to be fed, clothed, etc. They no longer have pay checks or jobs to return to for a pay check. Someone has to keep them! The tax payer is going to foot the bill.

We can all argue about the hows and whys until we die, it won't undo what Mother Nature's fury has done. We can blame anyone and everyone and as some have done - use a race card. WE ARE ALL INVOLVED - whether we like it or not. WE are ALL going to pay for it somehow. Just pull up the boots, and get to work. The sooner people quit spouting off and start doing - the sooner things will start to improve. It is so easy to sit back and criticize and not do anything to help. HELP make a difference. CONTRIBUTE. Everyone has "something" they can contribute. You are entitled to your opinion - everyone is, but in a case as this, use it to make "constructive" criticizm. Maybe you have a solution no one else has thought of which could alleviate a problem in the future. IF you can't do it nationally - do so - locally in your area.

Being we're still in the midst of what was called a prolonged and more dangerous Hurricane season - even before Katrina hit, we need to start looking ahead for the next one - should it happen - OR - ANY disaster. Use this as a learning example. Don't sit around and do nothing. BE PREPARED. IT could be YOUR life or those of your loved ones that you're saving. Many have the "it won't happen to us" attitude. People, we're not covered under an umbrella of protection. Disaster can and will strike anywhere, anytime and to anyone. NO ONE is safe.

Just think for a moment.... given what we're seeing now - what will we do when the situations as supposed - "may" happen

1. The devastating earthquake in the West Coast - strikes.
2. Other hurricanes
3. Nuclear or Biological attack.
4. "Any" war on our homeland
5. "Any" other threat not mentioned - perhaps an Asteroid! (Assuming anyone is left to deal with it!)

This my friends IS a wake up call and could only be the beginning - being the season for hurricanes isn't over. Any future calamities could be far worse - not trying to trivialize or minimize this event. IF they are - then what? We need to pay attention and get to work to be even more prepared - individually and as a country.

I apologize for my preaching, but being involved in both EMA and Communications - though I don't have all the answers, I put some ideas out to the masses for food for thought - to hopefully help in any future event.

May God be with those victims, their families and the rescue workers who are there.

Surely, even though the scanners you mention can receive digital signals, broadcasters such as the police would still be unintelligible ??. I hope so, after the amount of money the local police force have spent on encrypted airwave radios !!

PS Are the 'digital' frequencies you mention still within the 0-1300MHz band scope ??

Cheers
Andy

Andy, don't confuse "digital" with "encryption". The two are separate functions. A signal can be analog * or digital, plain or encrypted, or any combination of the two.

The digital scanners can receive a digital mode called APCO25. If your Police are using this mode, unencrypted, then you will be able to hear them. If the Police are encrypted, then as a previous writer said, you won't be able to decrypt it within any reasonable timeframe.

Our Police use digital at the 468MHz range, our State Government is planning on changing it's 400-420MHz system to digital in a couple of years, your local Police may be in the 800MHz band. You'll need to do some searching for that information, it varies.

* analog = analogue (Barry O'Grady, author of Dictionary for Pedants)

Brad.

Nope. That's a whole different digital mode again, and different to the
sound on digital tv and different to the digital pay tv. Sorry.

Brad.

National Situation Update: Friday, September 2, 2005
Homeland Security Threat Level: YELLOW (ELEVATED).
Texas Agrees to Take 50,000 More Refugees
The state of Texas agreed Thursday to take in three times more refugees from Hurricane Katrina than officials initially expected, bringing the total number of evacuees to nearly 75,000. Texas Gov. Rick Perry announced that 50,000 more refugees would relocate to Texas, with plans to house 25,000 each in San Antonio and Dallas. Those people would join 23,000 others who are already being sent from New Orleans to the Astrodome in Houston.

Late Thursday, however, after accepting more than 12,000 Hurricane Katrina refugees, officials said the Astrodome was full and began sending buses to other area shelters and as far away as Huntsville, about an hour north of Houston. Perry declared an emergency disaster for the state, freeing up money to provide services for hurricane victims.

The hurricane "has created emergency conditions in Texas that will require all available resources of both federal and state governments to overcome," Perry said. "We will do all we can as a state and a

people to help our neighbors to the east who have lost so much."

A shelter is being created in San Antonio in a huge warehouse at KellyUSA, a city-owned complex that once was home to an Air Force base. In Dallas, the refugees will go to Reunion Arena, the former home of the NBA's Dallas Mavericks. "Whatever we are called upon to do ... we intend to welcome these people with open arms and to try to give them some dignity which these circumstances have taken away from them," San Antonio Mayor Phil Hardberger said.

The governor asked the state Department of Housing and Community Affairs to set aside all vacant low-income housing units for refugees. So far 7,000 units have been reserved for hurricane victims. Texas will also open its schools and hospitals to some of the hurricane's most desperate refugees. The state Health and Human Services Department planned to extend office hours to help people with Medicaid, food stamps and prescription benefits.

"We're getting calls across the country from people who want to help," Perry said. "It's going to be the largest influx of refugees in American history." The American Red Cross has opened about 20 shelters in other Texas cities. Texas is a relatively close drive for New Orleans evacuees, many of whom escaped the city on Interstate 10 and Interstate 20 before Katrina struck. Tens of thousands of survivors continued to fill hotel rooms across the state days after the storm. Some hurricane survivors planned to start over in Texas. Many are poor. Some lived on the streets of New Orleans. Others lost homes or their jobs when the hurricane flooded their city.

"I'm not going back. I'm going to rebuild in Dallas," said Thomas Washington, 46, who arrived in a caravan of cars carrying 26 people. The group left New Orleans on Sunday and stayed first in motels. They eventually turned to the evacuee shelter at Reunion Arena in downtown Dallas. Washington, who worked as a security officer at a Naval facility, said his home near Lake Pontchartrain is gone. "All I have is a pair of jeans and a shirt," he said.

Perry, who agreed to Louisiana Gov. Kathleen Blanco's request Wednesday to take in the evacuees, said Texas naturally wants to help its neighbor. "I think we all understand it's by the grace of God that this terrible tragedy didn't come ashore a few hundred miles west," Perry said. (Media Sources)

Katrina Response Overview
Coordinated major airlift of evacuees to begin 8:00 a.m. CDT, September 2, 2005.

Evacuees will depart New Orleans Superdome by bus, and be flown at a rate of 4-5 planes per hour from New Orleans Airport to Lackland Air Force Base, TX for reception and housing at Kelly AFB.

Simultaneous bus evacuation continues: 12,000 evacuees to be housed at Houston Astrodome (12,000 evacuees capacity per Fire Marshall); and

10,000 evacuees to be housed at Dallas, TX, Reunion Center.

As of 9 p.m. EDT, September 1, 2005, 10,000 people have been evacuated from the Superdome (1,500 special needs, 8,500 general population)

American Red Cross/FEMA Family Assistance Planning completed. The 1-800 call-in number for family members to call to locate relatives will be functional Friday, September 2, 2005. The ARC website (www.familylinks.icrc.org) was activated September 1, 2005.

Tulane Medical Center evacuated; hospital evacuations still ongoing at Memorial (45 patients), Methodist (400 people) and Kindred (number unknown), 194 patients moved by MedEvac from New Orleans International Airport for evaluation and transport to Houston, TX.

43 National Disaster Medical System Teams with 1,196 personnel deployed.

National Guard has a total of 27,000 troops arriving over the next 5 days. More than 70 Federal Protective Services Officers and 100 Border Protection Officers assisting operations in Louisiana.

28 Urban Search and Rescue Teams staged in Louisiana and Mississippi - operations have ceased in New Orleans until National Guard can assist teams with security.

Planning to move 4 million MREs daily for the next three days.

76,000 people being sheltered.

13 assessment teams for hazardous materials have been deployed.

Coordinating with Amtrak on 1,500-passenger train for evacuation.

Developed and now implementing a National Communications Response Plan in partnership with industry.

Coordinating a strategic National Priority Plan for provision of fuel to responders.

Coordinating with Union Pacific for use of 60-75 tank cars for fuel movement.

Public Safety in New Orleans
Critical needs:

High-water vehicles
Additional portable radios because no power to charge current ones

Rescue operations have never been suspended except for NDMS and FEMA (ERT-A) employees in the Superdome area. They will return once get go ahead from LTG Honore that area is secure.

Currently have lost connectivity and visibility of operations at Superdome so they cannot determine if security issues have been resolved.

Commodity distribution continued - deliveries made to Superdome and throughout state.
2,000 law enforcement officials should arrive today.

Search and rescue continues, although team members have expressed concern about safety.

Working with ESF #13 to get appropriate Federal armed agents to support.

JOC established at LA State Police headquarters.

Temporary jail facility being established, need plastic handcuffs and shackles.

FBI Special Agent in Charge providing air support and special weapons teams.

Public Safety in Mississippi
Isolated incidents, but nothing widespread.
Important to have a strong showing of National Guard forces to deter unrest. 10,000 National Guard troops are being assigned to the area; 4,000-5,000 are there now.

Housing
FEMA is leading housing plan

Looking to secure cruise ships for housing support; have identified 3 ships with 6,500. Need approval to move them close to New Orleans.
1600 dorm rooms identified
400 hotel room identified
45,000 mobile homes and trailers identified - need to find site to place them

Logistics
Searching alternate sources for meals
2 million MREs are going into the affected area

MS EOC
Critical issues:

No communications on the coast, push-to-talk with counties will be available later today (have asked ESF #2 for help)
Health issues on the coast - looking at declaring a public health emergency
Attempting to get trucks to Chevron to refuel
Issue of releasing fuel to local governments
Shortages of MREs and getting food to shelters

Search and rescue - 11 teams there now, 19 will eventually be there.

NGOs and faith-based organizations are arriving, but still having problems providing meals.

8 refrigerator trucks have arrived and have requested additional body bags from FL.

Expect to have 100,000 people in shelters across the state.

Electricity is improving

AL EOC
Critical issues

Steady flow of commodities
Vouchers from ARC for workers
Movement of fuel

232,000 without power.

15 shelters are open and housing 1670 people.

20 distribution sites in 6 counties (1.9 million pounds of ice distributed; 460,000 MREs distributed).

7 fueling stations for first responders.

8 mobile kitchens are in place and 7 more to arrive.

LA EOC

Additional 7,500 National Guard coming into State, working on how to best integrate them into the response.

TX EOC
Critical needs:

Buses, drivers, and security.
Locations to shelter additional folks from LA (have spoke to mayor of San Antonio and worked out plan).

81 shelters available for 44,258 people; 44 are open and housing 9,346 people.

Have deployed all TX search and rescue assets to LA.

Have 10 helos available plus 2 fixed wing air ambulances; 60 ambulances; 1 blimp; EMS personnel, nurses, and doctors.

1,232 TX National Guard are in LA. (FEMA HQ)

National Forecast
Northeast: After a moisture-starved secondary cold front and vigorous upper-level system pop a few showers from the Adirondacks to interior Maine today and tomorrow, a sprawling area of high pressure will take total control of the weather across the Northeast and Mid-Atlantic. This will mean plenty of sunshine and no rain region-wide from Sunday and Labor Day right through midweek. High temperatures from the 70s in northern Maine to the 90s in Virginia will be replaced with highs from the 60s across Upstate New York and northern New England to the 80s in Virginia by Sunday.

South: The southern Plains and lower Mississippi Valley will remain hot with highs in the 90s right through the Labor Day weekend while the

Southeast will see highs in the 90s gradually give way to the more pleasant 80s by Labor Day. High pressure will dominate much of the region, keeping most areas rain free. A few isolated thunderstorms could pop west of the Mississippi, but otherwise thunderstorms will be confined to the immediate Gulf Coast and the Florida Peninsula. Thunderstorms could be particularly torrential in Florida, the South's potentially wettest spot this holiday weekend.

Midwest: Low pressure north of the Great Lakes could pop a few showers across northern Michigan before high pressure over the Plains begins a slow slide eastward for the Labor Day weekend, keeping most of the Midwest dry. The Plains will heat up this weekend with high temperatures approaching 100 degrees (near record levels) in parts of South Dakota tomorrow. A few isolated clusters of thunderstorms could roam west of the Mississippi from time to time although most places in the Plains will be rain free. By Labor Day, a cold front will swing eastward across the Dakotas, possibly providing a better focus for scattered strong thunderstorms.

West: A new Pacific cold front will move across the Northwest this weekend, bringing a few showers to western Washington and a few thunderstorms to the northern Rockies. The 90s in eastern Montana will be replaced with 70s by Labor Day. Meanwhile, moisture will be on the increase across the Southwest. The risk for isolated-to-scattered, mainly p.m. thunderstorms over southern Colorado and New Mexico will gradually extend westward across Utah, Arizona, easternmost Nevada and southeast California over the next few days. Temperatures in the Southwest will be 5 degrees either side of average. (NWS, Media Sources)

Tropical Depression Fourteen Remains Over The Open Tropical Atlantic
At 5 pm ast...2100z...the center of tropical depression fourteen was located near latitude 19.6 north longitude 46.6 west or about 1085 miles (1740 km) east of the Northern Leeward Islands.

The depression is moving toward the west-northwest near 12 mph (19 km/hr) and this motion is expected to continue for the next 24 Hours.

Maximum sustained winds are near 35 mph (55 km/hr) with higher gusts. Little change in strength is forecast during the next 24 hours. Estimated minimum central pressure is 1008 mb (29.77 inches).

The depression has changed little in organization during the afternoon with an exposed low-level circulation southeast of the main area of deep convection. The upper-level low causing the southeasterly shear over the system is expected to move westward over the next day or two which should place the depression under a slightly more favorable environment with less shear.

Model guidance continues to show a large split in forecast intensities. With all of the global models except the UKMET model dissipating the system in 48-72 hours while the ships intensity guidance bringing the

system to near hurricane strength in about 72 hours. The forecast intensity will be very similar to the previous package which keeps the system below tropical storm strength for 12 hours followed by slow strengthening. Needless to say, this is a very low-confidence forecast.

The initial motion is 300/10 -- slower and slightly to the right of the previous motion. The depression is moving around the southwestern periphery of a deep-layered ridge over the eastern Atlantic. The system is expected to make a gradual turn to the northwest over the next few days as the high builds to the east and an upper low remains near 65w between Bermuda and Puerto Rico. Due in large part to the change in the initial motion, the track is shifted slightly east of the previous forecast and remains in close agreement with the dynamical model suite through 48 hours. Beyond this time the forecast track follows a general motion to the northwest and north-northwest between the high to the east and
the upper low to the west. (National Hurricane Center)

Wildfire Update
National Preparedness Level 4

CURRENT SITUATION:
Initial attack activity was light nationally with 92 fires reported. Two new large fires were reported, one each in the Rocky Mountain and Northern Rockies Areas. Four large fires were contained, one each in the Northern Rockies, Rocky Mountain, Southern and Western Great Basin Areas. Very high to extreme fire indices were reported in California, Idaho, Montana, Nebraska, Nevada, Oregon, South Dakota, Utah, Washington and Wyoming.

A Presidential Disaster Declaration was issued on 8/27 for Hurricane Katrina in Mississippi, Alabama and Louisiana. An Area Command Team (Williams-Rhodes) is deployed to the Regional Response Coordination Center in Atlanta, GA. for Hurricane Katrina Support. Numerous resources are being mobilized as part of the relief effort. In recognition of current and predicted support levels to Hurricane Katrina, the National Preparedness Level has been elevated from PL-3 to PL-4.
OUTLOOK: Weather Discussion: Warming and drying conditions will move over much of the West as a high pressure ridge builds aloft. Afternoon wet thunderstorms are possible over the higher elevations of Colorado and New Mexico.

Colorado
NEW Blowout (Western Slope Center, Grand Junction, Bureau of Land Management): 426 acres at 10 percent contained. The fire is located five miles south of Palisade. Residences, structures, cultural resources, and a watershed are threatened. Steep terrain and limited access are hampering containment efforts. Extreme fire behavior was reported.

Idaho
Frank Church (Payette National Forest): 26,948 acres. This lightning-caused Wildland Fire Use (WFU) incident, comprised of the Bear Creek, Root Creek, West Fork/Joe, Missouri Ridge and several other fires is 50 miles northeast of McCall. The fire is being managed to accomplish resource objectives. Commercial property, residences and historical structures are threatened; structure protection is in place. Smoldering and creeping was observed.

Montana
Signal Rock (Beaverhead/Deerlodge National Forest): 7,650 acres at 10 percent contained. The fire is 17 miles southwest of Philipsburg and is burning on both the Bitterroot and Beaverhead/Deerlodge National Forests. Structures remain threatened and a protection plan is being developed. Torching and spotting was reported.
Seepay #2 (Flathead Agency, Bureau of Indian Affairs): 6,000 acres at 40 percent contained. The fire is two miles southwest of Perma. A microwave communications site, structures, and cultural sites are threatened. Road closures are in effect. Torching with short crown runs and spotting were observed.

Selway-Salmon Complex (Bitterroot National Forest): 14,839 acres. This lightning-caused Wildland Fire Use (WFU) complex, comprised of the El Capitan, Wapiti, Beaverjack, Reynolds Lake and numerous other fires, is 26 miles southwest of Hamilton. This complex, burning on both the Salmon-Challis and Bitterroot National Forests, is being managed to accomplish resource objectives. A campground, historic ranger station, and a lookout are threatened. Structure protection remains in place. Magruder Corridor Road will reopen today. Creeping and some active surface fire was reported.

Hazard Lake (Lewis and Clark National Forest): 750 acres. This lightning-caused Wildland Fire Use (WFU) fire is 33 miles near Choteau. This fire is being managed to accomplish resource objectives. Private land and a cabin are potentially threatened. Structure protection is in place. Creeping and smoldering was reported. This will be the last report unless significant activity occurs.

Oregon
Granite Complex (Wallowa-Whitman National Forest): 32,556 acres. This lightning-caused Wildland Fire Use (WFU) incident is 30 miles east of Enterprise. This complex is being managed to accomplish resource objectives. Structure protection is currently being reassessed. Fire activity increased in heavier fuels. (National Interagency Fire Center, National Interagency Information Center)

FEMA Regional Activity
Typhoon Nabi passed through the Commonwealth of the Northern Mariana Islands August 30-31, 2005. Reporting indicates the eye of the storm passed approximately 35 miles north of Saipan. Reporting of damage from the CNMI Emergency Operations Center (EOC) has been received [via Pacific Area Office (PAO)].

Preliminary reporting from the CNMI EOC includes: Saipan - homes destroyed and homes with both major and minor damage; Tinian also reported homes with damage (unspecified); Saipan - overflow of sewage along roads and "major debris" reported throughout island with some road washouts (up to 3 feet deep). No damage information was received from Rota by the time of CNMI EOC reporting. Rota has 100% of its power. Tinian has 90% of its power restored and Saipan has 40% power restoration. Full power is predicted to resume in Tinian and Saipan within 3-4 days. Two (2) debris collection sites have been identified and are in use by public works for debris removal in Saipan.

Saipan EOC was activated. Shelters were opened in anticipation of the typhoon with 675 evacuees occupying the shelters. Preliminary damage assessment by CNMI EMO was conducted. Debris removal has been initiated. Electrical power restoration efforts are underway.

A FEMA representative from the PAO was liaison to CNMI EOC during landfall of the typhoon. Request for joint CNMI/FEMA IA/PA PDAs was requested by CNMI. A five member PDA Team (IA/PA) is leaving for CNMI from PAO, Hawaii today. PAO,

An earthquake occurred today at 2127 EDT today, September 01, 2005. The magnitude of 4.8 event has been located in Southern California, 1 mile ESE from Obsidian Butte, CA and 7 miles WNW from Calipatria, CA at a depth of 3.7 miles. No report of damage or injuries. There is no state action anticipated and no request for Federal assistance has been received. (FEMA Region IX)

Other Tropical Cyclone Activity
In the Eastern/Central Pacific, no storms threaten land or any U.S. interests.

At 11:00 pm EDT, Typhoon (ty) 14w (Nabi)position near 15.7N 145.8E, or approximately 35 nm northeast of Saipan. Typhoon Nabi has tracked west-northwestward at 10 mph over the past six hours. Maximum sustained winds - 103 mph, gusts 127 mph, and significant wave height is 35 feet. (National Hurricane Center, Joint Typhoon Warning Center)

Earthquake Activity
No additional earthquake activity occurred during the past 24 hours. (USGS National Earthquake Information Center)

Preliminary Damage Assessments (PDAs)
No significant change during the past 24 hours. (FEMA HQ)

Disaster Declaration Activity
No new information during the past 24 hours. (FEMA HQ)

I have noticed that my scanner has gone silent in Brown Deer Wi. ,
Police is gone but North Shore fire is still using some of the
frequencys from the way it sounds. I think that police have now
switched frequencys . Does any body know about this or can you supply
the new frequencys. Thanks / Franko

Cheers Brad for the useful info !. Yeah, it's getting a very complicated scene out there. When i started scanning (Aircraft mainly) about 20 years ago, there was just AM/NFM/WFM and SSB (USB/LSB/CW). I was scanning on a Signal R532 ! (beauty !). No digital, airwave, tetra, motorolla, DAB blah blah !!!!!!!!!!!

Cheers
Andy

Especially the ones who stopped the looting at Walmart and
then occupied the building as a "command station", whence they started
sucking down the supplies "because we don't have any." Nothing short
of looting under color of authority. I'll bet they laid waste the
donut section in the first hour.

>The food will go off anyway, so what does it matter if people take food?

Not your choice, though. It's "stolen" until it gets "donated" - and
the only one who can decide when that happens is the legal owner.
Wal-Mart has the legal right to let it all rot if that's what they
want to do.

Not that I'm advocating hoarding, which is what that would be, but
legally they have the right to keep what they own.

And I'll bet that the only "discipline" those cops get is for letting
the public get wind of their looting. They'll probably be told -
unofficially and it never happened, of course - that they should have
shot the TV crew and some civilian and claimed that the "looter" shot
the crew.

>> so they can talk without repeaters.

>Please forgive my rant.... but it is worth thinking about - even if you find
>yourself disagreeing.

>Question is - is were they set up as such?

I have no idea, but that's irrelevant. If the mechanism exists, and
the department chooses to not take advantage of it, it's not a problem
with the technology, it's a problem with the department. Give them
any technology and they'd probably refuse to implement it.

>..... And the next question is - if they were - then what could be the
>reason for "not" using them? A likely reason is all battery power is
>exhausted - and that could be the case if the only radios left were the ones
>being carried by the officers at the time. All the rest "may" have been
>destroyed. With no power, they couldn't recharge any if they had a charger
>left to do so - at all.

Generators. Solar chargers. Again, the technology is there. If the
department chose to not take advantage of it ...

Tell me again, after enough time has passed that they would have run
out of any realistic amount of fuel for the generators, and it's
impossible to truck in more. (It isn't - NG trucks have been bringing
in fuel since the NG got there.)

>The only building(s) that I'm aware of which had
>anything left to it with a generator - was "a" hospital or so and the arena.
>They could probably have "tried" to recharge the radios there - IF they had
>a charger - which again - was probably gone. There ARE reasons why no radios
>were left behind or now usable. Lets face it, this hurricane put them back a
>few hundred if not a thousand years.

But, with proper advance planning, they would have had everything they
need (as far as communications goes). All they had to do was to move
their fully equipped, snorkel-engined commo van - with a generator,
full fuel tanks, chargers for every type of radio they use, spare
radios, spare batteries, etc. - to a high, protected spot before the
hurricane struck. Then drive it back into town after the hurricane

passed.

>Instead of blaming people, we ALL need to sit down and re-evaluate the
>situation before the next one comes - just what "would" we do - for
>ourselves, our family. In any event like this - you LEARN. Just like 911 -
>the city of New York's Public Service radios were swamped beyond use.

Nothing like that at all. There were problems, but the system wasn't
"swamped". Talk to the people actually involved in NYC commo - FDNY
commo supervisors and run board supervisors. (And supervisors of the
commo bureaus of other departments. Ham radio was operating as well
as people in total shock can be expected to operate all day, so why
wasn't a professional service like FDNY? I'm not knocking FDNY -
there were problems, but being "swamped" wasn't one of them.)

The technology is there. People have to learn that as soon as someone
says "there has to be ..." all conversation has to stop, and everyone
has to find out why that statement was totally wrong. (My answer to
that is always "why?", and no one can give me any answer that isn't
religious or totally monomaniacal.)

Then, and only then (once everyone realizes that man has almost no
control over his environment) can anything constructive be done.

But the technology is there. The only impediment to being better
prepared is inertia - the inertia of the human jackasses who are
usually in charge of those things.

Do you have all your important data files backed up right now? (I
just put up a new 300 gig drive, about 20 minutes ago, and the program
I put up on my web site 10 minutes ago is backed up to it. If I save,
I save to the backup drive too. It's a pain, but I've had drives fail
so I take precautions.)

>Lawlessness is foolishness. Taking food, water/drinks, medicines, diapers -
>though I don't condone stealing/looting, those are "survival" items.

I agree completely. It's larceny, but I wouldn't find the
perpetrators guilty if I were on the jury. I think it comes under the
same umbrella as self defense - a crime, but justifiable.

>But to steal TVs - Stereos which
>operated off of AC (only) when there is none - makes no sense, most probably
>is ruined anyway.

Ruined or not, it's theft. *Those* I *would* convict.

>To shoot at the very people coming to rescue you.... that can not
>and should not be tolerated. We who are working to rescue others who
>"desire" help - shouldn't have to be put into that situation. Those who do
>such things have no place in our society. "I" would issue "martial law"

>understandable they are upset, but those actions do no one any good.

They claim that the situation gave them the opportunity to "get back"
at those who "enslaved" them "all these years". That's nice, but
looting is still a crime. And killing a cop should be a capital
crime, even if it *is* a corrupt cop.

>Yes, there are a HUGE amount of problems here. With cooperation, help,
>money, it will start to take shape. It won't be easy, and it sure won't be
>as quickly as it happened. The whole country is going to wear this badge.
>ALL of those people have to be fed, clothed, etc. They no longer have pay
>checks or jobs to return to for a pay check. Someone has to keep them! The
>tax payer is going to foot the bill.

"The taxpayer" is they who "longer have pay checks or jobs to return
to for a pay check". NOLA won't be collecting taxes for a long time.
NOLA won't even be thinking of opening schools until some time next
year, according to them.

>Being we're still in the midst of what was called a prolonged and more
>dangerous Hurricane season

And it's not going to get better. Hurricanes are heat engines and
global warming (it's a fact - no scientist is arguing about *whether*
it is, just about why and how much) is causing worse hurricanes and,
since we're short-term-profit-driven, not logic-driven, global warming
is just going to get worse, so hurricanes are just going to get
stronger and more destructive.

>Surely, even though the scanners you mention can receive digital signals,
>broadcasters such as the police would still be unintelligible ??

Not at all. Not unless they're running an encrypted system, and that has nothing to do with whether they're using analog or digital modulation. You can encrypt anything and you can use digital modulation of one kind or another for anything - one is completely independent of the other.

>I hope so,
>after the amount of money the local police force have spent on encrypted
>airwave radios !!

You're confusing "digital" and encrypted". Digital is only "encrypted" if all you have is an analog scanner. But if you don't understand French, I can "encrypt" what I'm saying (from you) by speaking French.

>PS Are the 'digital' frequencies you mention still within the 0-1300MHz band
>scope ??

Of course, except for those above 1300 MHz and those not on radio. You can encrypt any communication - 10 GHz, 50 GHz, laser light going through fiber optic cables, audio telephone conversations - anything. Gordon Pugh could even encrypt his voice, but that's another conversation.

Agreed, but for the cops to "defend" the food only to plunder
it themselves is pretty abusive.

And much of the food, canned, bottled, dried, etc. would not
go off. That's why they recommend storing it for emergencies.

Teen in trouble with real police
Charged with impersonating Boston officer
By Suzanne Smalley, Globe Staff | September 3, 2005

A West Roxbury High School freshman who admits he is obsessed with police procedures says he called in false reports to Boston Police in a series of radio transmissions and now faces charges of impersonating an officer, authorities said.

The 14-year-old, who the Globe is not identifying because he is a juvenile, was also charged with disturbing the peace and was arraigned yesterday in West Roxbury District Court. He was released to the custody of his family and is due back in court on Oct. 28.
In an interview yesterday, the teen said he is a Boston Police Department enthusiast who keeps a green binder labeled ''BPD Notes" in his bedroom for logging calls he hears over his police scanner. He said he began calling in phony traffic stops and radio checks on Wednesday. He made the calls with a Motorola handheld radio he bought on eBay.

The teenager said he began making the calls because he wanted.....

I won't argue the point that they "could" have been better prepared. Why they weren't, is the question. As to FDNY - my info differs from yours, but so be it. The point is, we all need to learn from the mistakes to be better prepared for the next event. Otherwise, I think we basically agree! The bigger the problem is, the worst it is going to get. Everyone needs to take an active role in the positive to make sure things go much smoother for them and everyone else. The "system" can't do it all - as much as some would like to think.

BE CAREFUL!!! AND BE AWARE OF PEOPLE AROUND YOU!!

The Hurricane and Dangerous People on Your Streets

Hello Everyone,

New Orleans is toast. It's the biggest natural disaster in an urban area in American history.

It came to my attention that you and I may have a bunch of dangerous people in our towns and on our streets. South Louisiana has 1.4 million people from New Orleans scattered around here. Some are being bused to Houston.

The 100,000 + people that stayed in New Orleans are being "rescued" and turned loose along Interstate 10.

Looting is going on all over New Orleans. The "brothers" are out of control. A lot of these people are the lowest of the low.

Former governor Mike Foster, in the past, has called New Orleans a third world jungle.

Former governor Edwin Edwards threatened many times to send in the National Guard to take over control of the city from it's mayor, DA, and police chief.

They are possibly headed into your town.

They have no money, no drugs, no "pimp-mobiles" to low-ride in, no new Nike's, etc.

Last night some masked men broke into a Lafayette home, killed the man of the house and forced the wife to open the family safe. They pocketed the families life savings and left. (This incident has not been verified.)

I was out and about town today. I saw some scary looking people driving on the streets and in some of the stores I was in. Some of the lowest of the low.

This is a good time to be alert and watch what you're doing and where you are.

Alert your wife and kids.

No night-time shopping for a while.

No night-time bar hopping for a while.

Get in the habit of locking your house doors in the daytime.

Keep car doors locked.

Stay out of the crummy parts of town. No excuse to be there.

All the other common sense safety rules.

Finally.....if you don't have a gun, get one. You might need it.

It's been a few years since I fooled about with this stuff and I'm a bit lost right now but does anybody know if the Inmarsats are still receivable ? Are things still in the clear ? I remember I used to be able to tune into AFRS radio which was a great way to line up and test my setup but I know that they ended it on Inmarsat since.

Is there any up to date websites on receiving the Inmarsats ?

Many Thanks for any info.

Body handling: HTML body converted to readable text

I called Icom and the tech told me that I would need to loosen up the front panel in order to remove the top plate that contains the downconvertor and the regulator board. This wasn't the case.....it only required the removal of two screws on the rear panel and two screws at the top front of the plate assembly. The 10.245MHz LO was only 70Hz low, but the both of the BFO injection frequencies were at least 1kHz off-frequency so it was good that I opened up the unit.
I did order the 51.2MHz crystal from Icom and I received it a couple of days ago.....just in case the present crystal continues to drift.
It was surprising to see glass epoxy boards on the bottom and top units, but to see that the main receiver board was of a phenolic material. They must have used the same board from the R-7000.....not a bad thing, but I was surprised.

3575. Katrina USCG air audio request

Newsgroup: rec.radio.scanner
Date: 2005-09-04 15:20:22 UTC
From: Jarek <autosport_nospam@neostrada.pl>
Message-ID: <dff3c3$760$1@nemesis.news.tpi.pl>
Source record: 12287

May anyone that has any means of broadcasting audio from New Orleans
onto to web set their receiver to USCG air frequency ? And post the link ?

Often they use 381.8 but others maybe used. Freq list is here:
http://www.wunclub.com/files/uscg_air.html

Thank you

Phil

Yeah, right.

Like the two photos in the news?
The black folks with goods are "looters",
and the white folks are "getting supplies".

Desperate people do desperate things in desperate times,
but ignorant people are always ignorant.

In article <HNudndSK_ccH5IveRVn-pg@comcast.com>,
"SteveJ" <SJ@comcast.net> wrote:

clfe wrote:
> Here - before "our" 911 system came on
> board - the 10 codes tended to vary among
> Police units like people's choice of colors
> of homes. It could be very confusing...

I used to be the director of communications
at an S.O. Our codes shared SOME common
terms with the PD, others vaired quite a bit.

Example:
Signal 10 (SO) Minor traffic accident
Signal 10 (PD) Armed robbery

So one day one of the local armored car
transporters, who all had the SO frequency
for emergencies, called in and said -
"Advise the PD they have a signal 10
here at the corner of central and 3rd"

Were they reporting a fender bender or
were they reporting that the armored car
had been robbed?

PD, hearing the traffic on their scanners,
went screaming to the scene code 3, to find
a fender bender, no robbery. BTW code 3 meant
"Injury Accident" to yet another local agency.

Another difference:

One agency 10-53 = tow truck
10-54 = ambulance
Neighbor agency 10-53 = ambulance
10-54 = tow truck
Very confusing when one agency sends a terminal
message or comes up on your freq and says
"We have a 53 enroute to XXX location"

I'm a firm believer in plain language.
Although that has it's problems as well.

Example:

DISPATCHER "County units, I'll be off the air
for a few minutes, troubleshooting
in the jail"

Came across to some mobile units as
"triple shooting in the jail"

COUNTY ELECTION OFFICIAL:
"We have a machine gone down in the courthouse"
Came across as
"We have a machine gun down in the courthouse"

Sgt Lumpy

In the 60's movie "Them" about giant ants
that attacked New Mexico, the cops, supposed
to be NM State Police used KMA628 for their
callsign.

Not radio related, but on some of the old "Flipper"
TV shows, the coast guard helicopter winch guy
had a helmet that read "NAVY".

And speaking of Flipper, what kind of callsign
is WD9598, that Ranger Ricks used to say on his radio?

Sorry, I just couldn't let this one go.

I am a scientist. True, I am not arguing, but I do not agree with
"global warming". Interesting how when we were young, a new ice age
is approaching. Now it is global warming. Chicken little said the
sky is falling. This is a trick to take money from the U. S. taxpayer
and give it away to liberal concerns.

As far as hurricanes getting worse, this is another typical liberal
statement. This is no where near the worst hurricane in the recorded
weather history of the USA. True, it may have affected more human
life, but that is because they live there--NOT because the hurricane
was the worst. Once again, there is no evidence that any hurricanes
we have had in the last 10 years are worse that hurricanes in recorded
weather history of the USA.

"Logic-driven"? I think not. You rant, but you rant feelings (or
maybe agenda). Neither logic nor facts are in your message.

You're confusing messages for starters... Secondly I don't think anyone said
this was the "worst" hurricane in history. Third - Liberal as to
predictions? NOT - that came from the folks at NOAA and the Weather Channel.
They are "supposed" to be scientists or Meteorologists if you will - not
slanted in any one direction. So, though you may be a scientist, you sure
must not pay much attention to what is broadcast via those in the know. As
to "WHY" they may get stronger and more destructive - "I" am not a scientist
or meteorologist, so I won't try to pretend I am and overstep my bounds in
information. "I" get my information from those aforementioned who are
"supposed" to know what is going on.
You may be a scientist - self proclaimed perhaps, but it doesn't mean you
know "everything".

In a relevant field?

>True, I am not arguing, but I do not agree with
>"global warming". Interesting how when we were young, a new ice age
>is approaching.

Study paleometeorology.

>Now it is global warming.

And if I told you that I have a broken leg and my car is out of gas,
you'd see something mutually exclusive there too?

There's another glaciation cycle coming. (The continents haven't
shifted enough yet to stop it.) We're experiencing global warming.
The two aren't really connected.

>Chicken little said the
>sky is falling. This is a trick to take money from the U. S. taxpayer
>and give it away to liberal concerns.

And that's the scientific viewpoint? What science? Political
science?

>As far as hurricanes getting worse, this is another typical liberal
>statement. This is no where near the worst hurricane in the recorded
>weather history of the USA.

I never said it was. I said that, due to the fact that hurricanes are
heat-driven, and due to the fact that we're experiencing warming,
hurricanes are going to get worse.

Scientists are supposed to know something about significance and accuracy.

>"Logic-driven"? I think not. You rant, but you rant feelings (or >maybe agenda).

Speaking of agenda ... I'm not the one who defined someone he never spoke to before as a liberal.

Still is, but there are at least 72 counties in the state, and I'm not
going to spend a few hours researching something for someone I don't
know, when he can tell me where he lives and I can get the information
he wants in a couple of minutes at the most.

BArry, since you probably know about as much about the US as a dingo
does, you wouldn't know "US realistic" if it jumped up and bit you.
Steve is a racist - that's realistic. Racists are a few levels below
asshole - that's realistic.

If Steve would let the color on his neck fade, and take the gun racks
off his pickup (the one with the gigantic rebel flag flying on a 10
foot mast mounted in the bed), he might be able to pass for
semi-intelligent. Until he opened his mouth.

3588. Toronto Air Show (CIAS) - Frequencies

Newsgroup: rec.radio.scanner
Date: 2005-09-05 13:27:31 UTC
From: elconcho@gmail.com
Message-ID: <1125926851.050495.224390@g43g2000cwa.googlegroups.com>
Source record: 12300

Hi all,

I went to the Canadian International Airshow (CIAS) aka the Toronto Air Show yesterday and found that several of the frequencies posted around the internet were incorrect. Here's what I found:

Island TOWER 118.200
Island ARR/DEP 133.400
Boss Control: 119.200
Show Radar: 124.100
118.000
Pilot Commentary: 123.600
SnowBirds: 272.100

Metro Police marine units 861.1875 (fm)
Canadian Coast Guard Search & Rescue 157.125 (fm)
Air emergency 121.500
156.275 (fm)
Pearson Mil Air 234.800

The most interesting stuff was listening to Boss Control coordinate the show on 119.2. A plane would enter the show through that coordination then some would switch to 123.6 and talk to the croud. This commendary is piped through the P/A system at the CNE. When their performance was finished they'd exit on 119.2 then switch to 118.2 to get landing vectors to the Island airport, or directions to pierson, markham or buttonville.

The finale was the Snowbirds and it was truely awesome listening to them call their formations on 272.1.

Hope this helps someone.

They are somewhat common in my area of south central Pa at least for the PD.
I have noticed that they have their regular meaning (not sure about 10-10)
but the ones I noticed are 10-1 (Weak Signal) 10-4 (Afirmative) and 10-10
(Negative). I used to play around with CBs and have these codes in a book
somewhere.

try this site at the bottom of the page

http://www.privateline.com/Cellbasics/Cellbasics.html

or read the FCC document here ......
http://www.privateline.com/Cellbasics/FCCanalogcellular.doc

or ....
http://www.heavydutytrucking.com/2002/11/068a0211.asp

if you have an analog cellfone, after late 2007 , there will be
NO requirement for service providers to keep it alive. all big
metro providers need the BW for their more popular and profitable
digital phones. probably , in out lying areas and from small
providers, analog service will last a bit longer as they will
be slow to buy new equipment. it was a blast while it lasted,
but the " fat lady " is singing loud and clear !!!! ;^)

hope you don't have " onstar " ha hahah aha ha a

10-4 is the only one that I've ever seen
universally mean the same thing.

Variants I've seen
10-1:
- Relay this traffic "10-1 this info to the field supervisor"
- Enroute to hosp "Medic 2 10-1 to St Anthony's"
- Are you ok status request "ADAM SIX 10-1?"
- Sober "This subject is 10-1"

10-10:
- Lunch "Unit 9 10-10 at Wendy's"
- Paperwork "Pick up your 10-10's at the jail"
- Arriving on scene "Medic ONE is 10-10 the accident scene"
- Your call cancelled "Medic TWO you have been 10-10'd"

Hello, all :)
Name here is Sean, KD4ADV
QTH is Amelia County, Virginia 23002 , USA

Besides public safety,
what else is planned for the transition to digital?

(here's where I start to step up on my "Pelican Box"
-this is only for an impromptu and speaking my beef)

I hope Billy Tauzin and Ed Markey don't start their whining crap again.
Politicians!
I didn't vote for "them" to protect my scanner rights and privileges so that they could ban scanners from not only me, but from Public Safety groups as well.

I hope they're doing other things like working at walmart or something where they can stay out of the way of the American Citizens who take great interest in their enjoyment of their hobby of scanning, SWL, and Amateur Radio aspects.

If a politician in your area is planning on banning the use of scanners all together --- don't vote for that person and let them know that in a non-violent way, yet express your position and what will happen when scanners go the way of the Do-Do Bird!

I bought my first Bearcat BC-100 from BEST Products in Richmond, VA across from the Cloverleaf Mall.

I saved money over the years and bought the Pro - 2052 in 2000 and this year it went bye-bye electronically!

I want to invest on a good digital scanner, yet I am awaiting the 1st phase of the Virginia State Police STARS to take effect, yet I want to keep listening to the non-digital acitivity like :

The VHF band
Maritime
Railroad
Air - AM
and some of the existing analog Public Safety VHF Low/High Band.

UHF -
GMRS/ FRS
Military Air - AM
(I hate those scanners that only allow a small portion to be heard)
It's supposed to be 225 - 399.9995 MHz

The Bearcat BC-3000 is a good hand-held scanner because you can select which mode you want to program instead of the pre-programmed firmware(CPU / diode matrix) inside deciding for you.

I also like the scanners that go from 25 MHz to 1.3 GHz (excluding the cellular - i don't care 'bout that area.).

Some existing analog Public Safety.

Amateur 73cm band ("440"- band)

Is there anything that can be heard between 54 MHz and 87.7 MHz?

Look at all that has happened in Central New Orleans, LA and Hattiesburg, MISS.
Those that are not even near that area can monitor activity on receivers that have SSB and can monitor the ARES and RACES and other Emergency Amateur stations as well as military patrols and rescues and such.

I'm tired of seeing repeated photos on tv - there's no current photos - just "file - footage" of days during the Hurricane.

So, Americans have the Absolute Right to know how things in Louisiana are going more than they will hear from repeated reports on Headline News or CNN!
(cause they repeat that stuff over and over!)

No, I' m not badmouthing -- I'm just stating that there is an alternative to TV broadcasts and satellite remotes.
It's called shortwave, amateur radio and scanner.

Yes, not everyone knows/understands the purpose of Amateur Radio.
Nor can everyone own or afford such equipment unless they are licensed nor even have a receiver with multi-modes and 1000 channels so they can keep tabs on outside locations.

I would love to see ALL Automobiles / Trucks equipped with radios that can receive more than just the FM and outside the AM standard broadcasts and the Satellite radio stuff.
Shortwave begins on 1.8 and stops at 29.9995 MHz

Technology should be able to fabricate an antenna that will receive these frequencies without the need for a long-ass antenna hanging on their vehicle.

And that should have to cost the car or truck buyer a damn thing extra.

Speaking of cars.
What vehicle should be the Next "KITT 2K6"?

Imagine KITT, KARR, or *KIFT*, if he had the ability to receive digital trunked systems and display them on his screen.
Of course trunking was not heard of or thought of back in1982.
(*Knight Industries Four Thousand*)

Ok, I am through with my impromptu and speaking my beef.

Tnx,
Sean

Operating in buildings or neighborhoods with
extremely high impedances will gradually cause
the flux capacitor to increase in predominance.
A predominant flux capacitor loses it's gratuity
and can quickly cause the IM overput to granularize.
If you catch it early enough it can be repaired
by illumination solder applied to the reductor
contacts. But if it's gone on too long the
radio will no longer receive it's intended
frequencies. You can still use it as an
"Ocean Wave Sound" generator. Turn the
squelch all the way off and vary the
volume control to your liking. A Yagoplane
antenna will probably allow you to get the
best ocean effect.

Thank, Lumpy! You confirmed exactly what I had suspected had happened
to mine several weeks ago. Unfortunately, Radio Shack advised me that
this particular problem wasn't covered under their warranty....after
they finished looking strangely at me as I explained it to them.

I attached a reciprocating cam arm to the volume control so that the
sound changes rhythmically changes, thus greatly maximizing the wave
sound effect. But now I find that I wake up periodically.....?
I haven't figured that out yet.

3605. Fraudulent Websites for Hurricane Katrina Victims

Newsgroup: rec.radio.scanner
Date: 2005-09-07 00:16:00 UTC
From: John Kasupski <kc2hmz@wzrd.com>
Message-ID: <u0csh1d8vr0gds729t4j9ei9pcsi4mqj5b@4ax.com>
Source record: 12166
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave,rec.radio.scanner

Please be aware:

NEW YORK STATE OFFICE OF CYBER SECURITY AND CRITICAL INFRASTRUCTURE
COORDINATION CYBER INFORMATION BULLETIN
DATE ISSUED:
September 1, 2005

SUBJECT:
Fraudulent Websites for Hurricane Katrina Victims

OVERVIEW:
We have received information indicating that Internet domain names are
being created that could be used to lure unwary users into visiting
potentially malicious web sites.

BULLETIN:
Relief and charity efforts for the victims of Hurricane Katrina began
immediately after the hurricane devastated the Gulf Coast area.
Shortly
thereafter, web sites began to appear which were designed to defraud
unsuspecting users. Some of the activities include soliciting
donations
for seemingly charitable purposes, attempting to collect personal
information through phishing scams and also spreading malware to
unsuspecting users. Over the past few days, domain names that redirect
users to malicious web sites have appeared online, in addition to
email
scams requesting donations for those impacted by the hurricane. While
some of these sites and messages may be legitimate, many are not. At
the
time of this bulletin, please be aware that the following domains are
reported to be suspicious:

katrinahelp.com
katrinacleanup.com
katrinarelief.com.

Please note that this is not an exhaustive list and additional domains
may continue to appear.

In addition to fraudulent web sites, opportunists may use this event
as
a vehicle for other types of online attacks. For example, email
messages that claim to contain attachments with photos, video, or
other

information about Hurricane Katrina may actually contain viruses,
worms,
or other malware.

RECOMMENDATIONS:

We recommend that staff be advised to:

* Validate the relief fund or charity through a known reliable
entity. Please refer to the FEMA link below for a list of reputable
disaster relief resources for Hurricane Katrina.
* When a message containing a request for donations for these
victims appears, do not respond unless you are certain it is a valid
message.
* Avoid visiting untrusted web sites.
* Avoid opening email messages and attachments that claim to
contain video, photos, or other information relating to relief
solicitation for Hurricane Katrina.
* Follow standard best practices for email and web browsing
security.

>Also, it has almost no image rejection.

10.7 MHz IF - so the lack of image rejection above 107 MHz isn't
surprising. (10:1, which is one reason for multiple conversion
receivers - it's difficult to get narrow bandwidth with a 90 MHz IF.)

Anyone know if Javiation is still in business? The webSite is still up
but at least one posted price appears somewhat outdated and a recent
online order seems ignored and eMails go without reply...

Several years ago my business with Jonathan went relatively well and it
would be disappointing if things have changed for the worse.

Thanx,
Bob

I'd say, keep it in the position that it looks like to you. I could only assume that it's the "OFF" position.

Don't worry though, you don't need to know what your neighbour's are talking about on there cordless phones. It would only upset you and your family.

By the way, from what my friends say, if I only program in the frequency 26.000 mhz in all my channels, that having a smart radio, it'll already know what I want to listen to, so it should be smart enough to pick them up on 26.000 mhz. The way I see it, I don't need any more than 10 channels. I should have a few spare ones at that. What would u suggest I put into those. Because the radio is so smart, the instruction book tells me it only has one priority channel because it is so smart, it'll let me know what's on any channel whenever something might come through.

I tried the frequency of 26.000 mhz but came up with nothing.

Another friend of mine (over in the subsidized part of the village) on the cb radio portable I have told me that I could use the frequency 31.000 mhz, and it should be just as smart. So, being that I don't know much about scanners I tried that one too. But the scanner was so smart, that it outsmarted me, and did the same thing that 26.000 mhz did.

Guess I'll have to by another scanner soon. Which model would u consider? I may have to get a portable though. I hear I can get much closer to the signal if I have one of them.

How do you make a dead looter float?

First you get a tall glass, add two scoops of dead looter and 8 oz of cold milk, top it off with whipped cream and a cherry.

Hello, welcome to the group. I vary my listening times during the day,
I listen an average of 8 hours a day, and vary what I monitor, as not
to get bored, and to try different frequencies.
I'm kinda curious of where you live and what scanner you use. I live
in Calgary, Alberta, Canada and have an oldie but goodie Pro - 25.

I think more and more services will go digital and trunked. Even our local Canadian Pacific Railway police went to Apco 25. But I do not think scanning will die, as digital scanners get cheaper and the restrictions on them will not continue. I agree that scanning and shortwave radio is an excellent alternative to the TV, am/fm radio, satellite and even newspapers. I know a little bit about amateur radio, and they can be very helpfull in emergency situations, as well as being a life line in areas where their is no other means of communicating.

You can get the complete FCC Licensing Division Master Database from the
folks at http://mysite.verizon.net/moment_1/scannertesting/contact.htm
it is a frequency database covering ALL 50 US states plus all US
territories, so everything that has an FCC license is on it.

If you weren't half stupid, you'd grasp the concept that the site is for searching for RECENT CHANGES ONLY. It's not a complete database...

Considering the data in the search is all NEW data that was published on the FCC site between 8/9/05 and 8/14/05, I'd guess that it's FAR from being "out of date," as you claim. I'd actually have to say that it's probably MORE IN-DATE than your 6 month old Database CD you trying to sell illegal copies of...

There are two sets of batteries for this scanner. the "memory" batteries are under the six AA batts and their removable holder. Just lift the cover and replace them. I can't remember the battery #'s but it should not be to hard to find them.

I didn't reply to the claim a 34 overloads easily, but I might as well chime in now. The Pro 34 I had and 37 too, had very little overload problems. My 2004 and 2005 are pretty much bulletproof. My BC9000 overloads like crazy from pagers and the really close PD tower that is full quieting, and beyond, without any antenna at all. All the Uniden scanners and Uniden built RS scanners I've had have had overload problems, very few GRE made radios ever have.

I buy both and give them a shot, but the GRE stuff more often stays. The lack of Uniden quality control makes me leery too. They seem to forget to solder stuff a lot.

I think the Pro34 uses a large value, ~0.47F, not uF but "F".
With age these dry out and loss the ability to hold a charge.

I don't rmember where it is located, but I htink it is near the CPU,
"bigish" IC. It will be a farily large but "squaty' cap.

Terry

It's free?? where can I get it for free? please tell us where we can all
get that CD-ROM with all 50 US States plus all US territories on it for
free!! And please don't say download it, it's a 730Meg .dbf file that is
not offered for download anywhere. So please tell us all where to get this
database for free.

Well that says "FREQUENCY UP TO 47.999999" and with everything in my area
of the world from 140.0000MHz to 920.0000MHz it wouldn't realy work. It
also says it's in the "United Kingdom" so I'll pass on that scanner.

I don't think ANY scanners come with removable heads, but you can buy
retrofit kits from ScannerMaster for the BC780, BC785 and BC796. I have
one on my 796 and it works great.

How does that work, Richard?
Do you have to remove the faceplate from the
796 and attach it to some kind of remote
mountable shell? Then some kind of plate
with a cat 5 connector attaches to the
front of the 796?

Geez they want $450 for the remote kit!

What type of interface does it have? Can I search by State, County, City, RS Code etc? Can the information be edited (easily) in an Excel spread-sheet, then copied and pasted into a radio control program?

I can find all the information I want from the FCC site, just couldn't find a way to get it organized the way I want it.

What would be the difference if it is just a big file thrown on a CD without a means to search and organize it?

And $5 to mail a CD?

That is exactly how it works. The kit comes with 2 circuit boards, one attached to the new front for the radio unit and another that attaches to the rear of the board on the head. A mounting shell for the head and a front for the radio, as well as a cable to connect the two are included. Of course it also has the various internal cables and connecters needed.

Yes, it is pricey, but it is obvious that a lot of work and engineering went into this. Ya cant just extend the wires...

Yes they add $5.00 to mail a CD because the CD envelopes cost $1.20 and
someone has to put $1.45 worth of postage on it and then take them all to
the post office. so in todays world of $3.50 a gal gas don't you think that
guy should get at least 1gal for doing the jub or do you think everything
should be free to you?? The interface is bDase they recompile it from the
Adode formate .pdf where you can't do a thing to dBase and yes you can cut
and past your heart out. and yes you can search by state, county, city,
call sign RS code name and anything eles you can think of. And if you went
to: http://mysite.verizon.net/moment_1/scannertesting/contact.htm and read
what it says you would no all that :-)

I must have missed those posts, seeing how buried under your spam they
were.

It's www.fcc,gov

Not everyone needs to be led by the nose, as you obviously do.

Oh - and the data at that site is up to date, not like your 6 month
old (and getting older every day) CD.

Bull, unless you're buying them from yourself. Mailers cost about a
dime - sleeves cost a couple of cents.

and
>someone has to put $1.45 worth of postage

$1.45? A CD in a mailer only weighs barely 2 ounces (actually 1 gram
less). That would be $0.60. The $0.85 is just part of the rip-off
fee.

> on it and then take them all to
>the post office. so in todays world of $3.50 a gal gas

It was the same price long before gas went up, so that dog won't hunt
either.

>The interface is bDase they recompile it from the

>and past your heart out.

Or just read it into a database. Those of us who do that kind of work
every day know how full of it you are with just that one claim. No
one who knows what he's doing copies and pastes data into a database.

Oh, and who's this mysterious "they" you keep referring to? You have
multiple personalities?

Go post on alt.i'm.a.dummy. Maybe someone there will fall for it.

no moron there is nothiung at http://www.fcc.gov that will let you
download the complete FCC frequency database covering all 50 US States
plus all US territories, and again you look as stupid as you sound. and
the other guys asking you to post that link where, The Other George, That
Other Guy, No Spam oh and me. thats 4 people and yet you have still not
posted a link to this free download?? Why is that?? could it be because
there is no free download?? D'oh! See folks wouldn't know how stupid you
are if you just keep your mouth closed, but when you open it you remove
all doubt.......

Besides the ham bands and the few, if any, analog cordless telephones, what other analog signals might one be able to receive and understand in the 2.4GHz to 3.3 GHz range (assuming a suitable antenna is used)? And besides analog, what other digital signals decodable with a sound card and appropriate software might one find in that range as well? In other words, will the extra range offered by the Icom IC-R20 above 1.3 GHz really be useful for anything?

- Doug

I did go there and it didn't really say all of that. In fact, reading the site (misspellings, poor grammar and all) gives me the impression that it's just a bunch of clueless, slack-jawed goamers, sitting around trying to come up with something profound.

I'll spend my money on professional products, someone who puts out quality rather than some hicks trying to pull together some hooch money.

No moron giving the general URL of http://www.fcc.gov is not giving the
URL of where to download this fictional free file you keep talking about.
In fact there is nothing to download at http://www.fcc.gov but
"Headlines" in ether Word or Acrobat. So you must injoy making people
think you know what your talking about when in fact you don't have a
clue. You saying this information is free and can be downloaded from
fcc.gov is just sending people there looking for something that is not to
be found! Your wasting there time and your looking like just what your
are, a moron kid trying to look like a big boy that knows it all. a URL
where something can be downloaded would be:
http://wireless.fcc.gov/commoperators/eqp.html
giving people a general web-site and saying you can get the complete fcc
database there is misleading to say the least, and calling me a liar
because I pointed out that fact really makes you look like a fool. Now go
back to playing your computer racing game and leave the big boys alone.
Or better yet put a real URL up to the page where this fictional file
can be downloaded, like I said I'll start it for you http://
any one with a 10 or higher IQ can call them at 1-888-225-5322 or e-mail
them at fccinfo@fcc.gov and ask about buying the database. You see I
really don't care if you buy it from them so I'm happy to give you that
info, and when you pay $75.95 for it and it comes in a .pdf mormat that

will not work with any spreadsheet or bDase program you can figurout how to use it. And again I'll point out the fact that this thrid was a gent asking where to get another database other then PerCon that also cost mony so I guess he's a spammer to right?? anyone that gave him an answer must be a spammer!!

when you get a "page not found" it means there will be no PLAY BUTTON
MORON. the page can not be found to start Win Amp so you can't click on
any Play button.. and you just keep looking like a fool. Like I've said
before, if you just keep your mouth shout no onw would know how dumb you
really are, but you have to open it and remove all doubt!!

And a link to the Wireless Telecommunications Bureau (right side) , then
link to Dabases (left side) and from there one ends up at
http://wireless.fcc.gov/cgi-bin/wtb-datadump.pl
but it is true the format pf the downloaded files is not at all friendly and
one must be good at database work to use it making most much much better off
buying someone elses CDROM where they have put it in a more useable form.
(If you have never worked with databases, do not bother downloading the
files from the site as you will not know what to do with them.)

I guess kla1899 missed the "Needs WinAmp" part. I've never seen "This
page cannot be displayed" in Winamp.

Of course, kla1899, being something other than a moron, knows better than all of us put together so, for him, using a web browser should work. The rest of us will just have to use Winamp to listen to Winamp feeds.

3674. Iridium...can you receive it ?

Newsgroup: rec.radio.scanner
Date: 2005-09-13 01:15:42 UTC
From: Bla <bla@geenmail.nl>
Message-ID: <e1a61$43262836$3ec20f3b$26661@news.chello.nl>
Source record: 12136

Hi, i'd like to invite those interested in Iridium
to join our discussion-group where we currently
look at the possibilties of receiving and decoding
Iridium signals.

As you may have noticed the Iridium satphone system
has currently gained a lot of attention thanks to
it's use in Iraq and in the Katrina area.

Here's a few technical details:

Handset TX-power is an average 0,6 Watts
RX sensitivity is -118 dBM
Frequency-band 1616-1626,5 MHz (L-Band)
Duplex is Time Division Duplex TDD (RX/TX same freq)
Data-rate 2400 Bd (V42b compression)
Modulation is QPSK
Acess/Multiplex is TDMA/FDMA
Coverage: 100% Worldwide (sat in sight)
Calls currently barred to: N.Korea,N.SriLanka
Use forbidden in: Cuba,Iran,Libya,Sudan,Angola
Services: Voice,Data,Paging,Voice PTT,Group calls
Mobile < > Sat link=encryption NO (?)
Sat < > Groundstation link-encryption YES (?)
Sat < > Sat link-encryption: UNKNOWM (probably NO)
Standard end-to-end encryption: NO
Add-on encryption units available: YES

To take part in this discussion sign up at:

http://groups.yahoo.com/group/gsm-scanner

membership is free,the group is moderated.

this group is mainly talking about GSM and Cellphone
interception,encryption and security
but we will now extend our interests to satphones.

Greetings

contranl (moderator Yahoo group GSM-scanners)

Bought brand new, case is wearing.
For 500.00 expect much, much more. Plus audio just plain sucks and always need adjusting.
My recommendation is Radio Shack.

At least those scanner work, and I have one going on twenty years still working just fine. Most Uniden stuff doesn't make it past four years, and usually earlier has multiple problems.

> http://wireless.fcc.gov/commoperators/eqp.html

Again, it exists, you're just too stupid to find it... I love those that
think they know everything, yet when they speak, or type, in this case,
removes all doubt of just how little they actually do know...
BTW, the only thing you will download at you're link is examination
questions for commercial operators. Quite useless in this case.

> giving people a general web-site and saying you can get the complete fcc
> database there is misleading to say the least, and calling me a liar
> because I pointed out that fact really makes you look like a fool.

You pointed out nothing. You made yourself look like a fool...

> Now go
> back to playing your computer racing game and leave the big boys alone.
> Or better yet put a real URL up to the page where this fictional file
> can be downloaded, like I said I'll start it for you http://

Fictional, it is not... Too lazy to look for yourself? Yeah, thought so...

> any one with a 10 or higher IQ can call them at 1-888-225-5322 or e-mail
> them at fccinfo@fcc.gov and ask about buying the database.

Yup, you could, but why? You can download the information, UPDATED WEEKLY,
off their website for FREE...

> ...and it comes in a .pdf mormat that
> will not work with any spreadsheet or bDase program you can figurout how
> to use it.

Wrong, again. It comes as a .ZIP file that contains numerous ".dat" (text) files, that can easily be imported into ANY database program, provided you know how to use one. It can then be exported into whatever format you'd like it to be in... (Great spelling, again, BTW!)

If this were a moderated newsgroup ... :)

I especially love this part:

>> Now go
>> back to playing your computer racing game and leave the big boys alone.

What he doesn't know is that he aimed that at someone who's most
likely old enough to be his father, and who has been dealing with the
FCC since before he was born. My first phone ticket, which hasn't
gone by that name in decades, is older than he is.

But let's not confuse him by giving him facts. Let the little boy run
his lemonade stand. Some people might like unsweetened lemonade.

Uniden has a repair for that. Try contacting them.

>For 500.00 expect much, much more.

I never expect human beings to be perfect. You *always* get disappointed if you do. The only person who was perfect either (depending on your beliefs) never existed, died almost 2,000 years ago or is still with us. Everyone else - everyone - even you, makes mistakes.

> Plus audio just plain sucks

Mine sounds fine. Maybe you have a defective one and it should be returned. (Bad speaker? There were a couple of those. Rattling sound? It needs thicker shims.)

> and always need adjusting.

If you're talking about the P25 decode, learn how to set it properly and you won't have to reset it unless something is changed in the system itself.

>My recommendation is Radio Shack.

Want to sell yours cheap? After all, it does suck, right? Say $100 and I'll pay shipping and insurance? I know a sucky scanner isn't worth even that much, but I really don't want to see you hurting like this, being forced to keep a scanner you can't stand owning.

3687. Radio Shack Pro 2051 Scanner Opinions...

Newsgroup: rec.radio.scanner
Date: 2005-09-14 13:26:03 UTC
From: PowerHouse Communications <PowerHouse@PrivateBox.Net>
Message-ID: <BxVVe.4342$6Z3.4063@fe06.lga>
Source record: 12148
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm looking for opinions on the Pro-2051 scanner. The only experience I have had with "pre-programmed" scanners are my 2 older Uniden BCT7s. I live in Michigan, so I know that I "need" digital, however I have yet to purchase ANY scanner that is digital capable, as they are far beyond my budget, unfortunately.

The scanner will be used to replace my BCT7 in my car, in case anybody is wondering... I guess I am just wondering if there is any reason to buy this to replace my current unit. Would it be worth my while, as perhaps it offers better performance than my BCT7? At the very least, I'm sure it will provide me some relief from all the cellular phone images in the 800-band, as mine is the older, DUAL conversion unit, not the newer triple conversion...

Currently setup consists of the Mobile Mag-mount RS scanner antenna, with my (older style) BCT7.

Thanks for any input!

The 2051 is missing lots of features like CTCSS/DCS, alpha tags, Mot 900 MHz tracking, and EDACS narrow. It is apparently now discontinued and may be worth getting if the price drops below $100. Otherwise consider the PRO-2055 instead. There is no manual for the PRO-2055 on the Radio Shack site but you can compare features by downloading the PRO-97 manual and the PRO-2051 manual.

Hi,

Has anyone ever programmed their PC to communicate with an
AOR receiver?

I just got a protocol guide and want to be able to read the
frequency from my AR8200 using software I am going to write.

Does anyone have or know where to find some sample code to
communicate with an AOR radio from the PC?

In particular, I would like to learn how to read the
frequency from the receiver and I think I need to use the LC
(Frequency & level status) command to do that.

Thanks for any help,
Dave

Agree, very nice and it would be a great radio for when you are way out in the middle of nowhere with an emergency. You can always contact a plane flying over to relay your position and situation to local authorities and not have to rely on a Ham 2 meter repeater being nearby. Very cool radio and nice size and battery life too.

Nice..
I've seen similar equipment discussed in ultralight Backpacking Yahoo
group..

http://groups.yahoo.com/group/ultralightbackpacking/

Someone (Hiking alone) Took a 40 foot tumble down a cliff..
Survived..
now carries something like whats in the link above..
Use it only once and it's paid for immediatly .. .

3706. Help finding Scanner for Orange County, CA, USA

Newsgroup: rec.radio.scanner
Date: 2005-09-16 23:25:32 UTC
From: jpolaski@rgs.uci.edu
Message-ID: <1126913132.551815.293340@o13g2000cwo.googlegroups.com>
Source record: 12068

I'm haing trouble figuring out which would be a good scanner for Orange County, California. By radioreference.co, for Orange County (http://tinyurl.com/c6ya9) it looks like everything is on Motorolla II or LTR trunking, so I figure I need to get a good trunking scanner. I'm having a hard time figuring out which one to get, though.

The police are on Motorolla II, but are digitally encrypted. Does that mean I need a regular digital scanner, like the RS PRO-2096 or Bearcat BC796D to listen to them?

I'm hoping to get the most scanner for my money... I'd like to keep it under $200, but could go up to $500 if it was really needed (if I really needed digital, for example). I'd like to end up with a good all-around scanner, but the main thing is it has to work well if there is a big emergency (like an earthquake). So I'd really like to be able to hear police and other emergency services. Maybe even National Guard or other military chanels.

Thanks for you help,

Jeff P

Anybody with digital scanners in the Detroit area, have any problems monitoring their new simulcast system?? I have an R/S Pro-96 (firmware upgraded to 1.2), Pro-2096 (firmware upgraded to 1.2) and a Uniden BC796D which I use to listen to digital systems. For some odd reason, all 3 are having problems decoding the Detroit system. All 3 scanners claim they can decode CQPSK/C4M, which this system supposedly is, but none of them are able to offer an intelligible signal. On some occasions, you can hear part or all of the transmission, but its hit or miss. All 3 do an awesome job with all of the other systems I listen to, so what gives?

I will go out on a limb here. I assume you are evaluating all three radios from a fixed location? Could it be you are located outside the Detroit area? Simulcast systems are very particular with respect to phasing. If your monitoring location is such that you are hearing two or more sites that have a differential of more than about 15 miles, you might be getting poorly phased simulcast signals. Try moving the receivers to a different closer in site. If that works, you may need a yagi antenna for you base to discriminate the best site for reception.

No, that means it's practically impossible to listen to them.
Figure out what you would like to hear, excluding OC police, and
base your choice on that.

Which particular system (MPSCS)? Which particular talk groups?

Its the newly added simulcast system, (listed on radioreference.com as MPSCS #701), which claims to have 10 sites. It just came online last week and is being used by MSP and the City of Detroit. I do notice that the previous Detroit system for MSP is now off the air. I believe that it was listed as #209 in the MPSCS list. I had no problem monitoring that.

Yes you are correct. I am located in a suburb of Detroit, aprox. 10-20 miles from the 10 sites. 2 of the radios (the Radio Shacks) are using telescoping antennas. The BC796D is fed with a commercial 800 mhz vertical (9913 coax), tuned to the 866-869 band. I would have figured that at least that radio/antenna would have no problem with reception? There seems to be adequate signal, according to the s-meters on the radios. I've had no problem monitoring other non-CQPSK/C4M 3600/9600 baud systems until now.

You do state that a Yagi would be preferable.....hmmm, that might be the answer. This hobby is getting dogone expensive!!!

Thanks,

Chris

What happens 30 September?

3726. Football Coach Radios

Newsgroup: rec.radio.scanner
Date: 2005-09-17 16:25:45 UTC
From: Steven Hardy <gtg945q@mail.gatech.edu>
Message-ID: <dghg04$n0i$1@news-int.gatech.edu>
Source record: 12088

Would anybody know if the wireless headset radios that football coaches use, particularly college but also NFL are able to be picked up by scanners? I have been told that they are often digitally encrypted, but others have told me they can be picked up in the 450-465 range just like any other short range radio.

Thanks for the help,
Steven Hardy

>
>
>

Well ever your site does not have the 2 files we get from the FCC when we buy there database from them. What we get comes on 2 CD's and it is in .pdf formate, we convert it to .dbf dBASE format that can be read with any dBase type program. On our CD is a link to a free download of the old Visual dBASE 7.5 and it works beautifully for doing anything you want to do with a .dbf file. The files the FCC sends us are both bigger then 700Meg and to convert them from .pdf to .dbf takes just under 18hr.

And yes I do get a bit pissed off when some moron comes on telling folks it's free it's free when we just shelled out $75.95 for the CD's and when 4 people ask him for the like to these two 724meg and 729meg files he writes some bull shit like fcc.gov.. You can search fcc.gov from now tell hell freezes over and not find there complete lcensing database for download, i. e. if they send it to us on two CD's, the total file would be 1.453Gig to download. So a guy on a 56K dial up would be download for the next two weeks. It piss me off even more when this thread was a guy asking for any other date base because he was having a problem accessing the one he just paid for, and the moron say spamer spamer spamer.. God what a 5 year old.. Pointing the gey to a good priced database is not spaming.. I guess he thinks every one should pay for a data base and work for hours to convert it and set it up so even he can use it then offer it for free "NOT"

They are announcing a new Uniden scanner. Which won't be available for 3-5 months.
Then will require several upgrades, and maybe even ship the unit back to the factory for something they forgot or left out.

Buy a Pro-96 for digital scanning. It's available and it works great. And none have had the letters and numbers wear off like the brand new BCD396.

Or have ever opened on a fire tone-out. Or have free software to
program them. Or can be remotely read or controlled. And still costs
as much as (or a little more than, depending on where you shop) the
BCD396T.

And, if any of the firmware (any - CPU, DSP, anything) needs a fix, no
matter how minor, the scanner has to be shipped back to Radio Shack -
at your expense.

And Uniden maintains a presence on the Yahoo groups and the fora -
Radio Shack and, more importantly, GRE, is nowhere to be seen. You
want something changed? Write it down and burn the paper - maybe the
gods will be kind. Uniden doesn't just listen to us - they
participate in discussions, and modify the firmware due to users'
suggestions and desires - as witness the fire tone-out mod in the
latest firmware.

So, Al, tell us - when's the last time you were perfect? You still
haven't answered that one.

If they're using non-encrypted radios that aren't DSS, they might as
well post their plays on the board for everyone to see. IOW, don't
bet on intercepting those signals without some very sophisticated,
very expensive (and probably very illegal) equipment. Except, maybe,
for high school games.

3732. JACARS Acars Decoder Program ?

"Al Klein"

Yep, I agree with Al. Plus, with Radio Shack stuff Everything is an extra; wall warts; cables; software and so on. Batteries. If you can get the scanner out of the plastic prison they pack it in; it still won't work unless you spend 60 - 70 dollars more for the mandatory accessories.

Voice as opposed to music is fairly simple. Voice as opposed to data
is trivial. Absolute "this is voice" is impossible.

It's not aircraft equipment, it's a single-band ham transceiver that
can receive aircraft. There are cheaper multi-band ham transceivers
that have wider receivers than that. My VX-5, for example, can
receive aircraft - AND any frequency from 0.5 MHz to 999 MHz, AM, FM
or WFM, and can transmit on 6, 2 and 440. And it's cheaper.

From what I see on their web page, it appears that the VXA-700 is an
airband transceiver (not just a receiver), with 2-meter amateur
operation added.

It does look as if it re-uses a lot of the VX-7 construction.

Any stupider than when the self appointed 'Ace' uses it ad nauseam? I
don't think so. It just can't get ANY more stupid.

don't know about Stateside, but here in the UK, PMR446 is increasingly used for such diverse situations as intercom, vehicle control, site security and even school outings. There's 304 channels available (8x38) seperated by (I think) 6.25KHz from 446.0-447.9MHz. The reason for its gaining popularity is twofold: clarity of signal and amplitude over given distances up to 10-15 miles for professional gear, 1-2 miles outdoors for leisure units; and the fact that a license to operate one is not required. I own and operate a sizeable collection of such units myself, including two pairs of leisure units (one pair of BT Freeways and one pair of Albas) and one pair of pro units (Kenwood). The Kenwoods are good for 10 miles solid on a bad day.

However, his "broadcasting" days are about to come to a close -- owing
to the FCC "red light rule" discussed in other threads, the setting
aside of his renewal application is going to put him off the air at the
expiration of his present license. If he continues transmitting after
that date, he'll start racking up more fines for unlicensed
operation....

Forget soap operas and "reality shows." This stuff is =way= more
interesting.

Chris - have you tried moving the antennas around? Longer - shorter - lean left - lean right - etc? How about adding some attenuation? (perhaps a cellphone site recently activated near you).

Also - the advice that you received about a Yagi sounded reasonable to me.

The new simulcast systems probably are not designed to offer service 10 miles outside of the city.

In the U.S., those freqs are right in the middle of the ham band or, is it
different in the UK?

The NFL uses an encrypted wireless system built by Motorola to insure
that neither you, or the opposing team can listen in. You can probably
pick it up on a scanner, but since it is encrypted, you won't hear
anything intelligible.

I only know how to use the signal level. But voice squelch
is probably a bandpass filter (for voice frequencies) before
the signal level is measured...I wish I knew.

>is there open source algorithm which I'd be able to use(c,c++ or java)?

I don't know. But I did a google and saw some info about it.
You might be able to find somebody who submitted some code
to CodeProject.com or CodeGuru.com maybe.

I can help explain how mine works if you send an email to me
at the same address except the domain is davee.com. I use
c++ for my algorithms.

The Pro-96, after you buy the AC supply/charger, programming cable,
batteries and software is well over $500. For less money you could
buy the Uniden BCD396T and get MilAir coverage and fire tone-out
alert.

It is FAR from over, after the FCC makes it's decision it goes to Court
of Appeal where he can challenge the FCC rules and or decision. If he
transmits, he will be unlicensed which can speed the process to the
court systems like I said it's FAR from over.

Uniden's coming our with some news on the 30th. Probably a new
scanner. All we know so far is that it'll be smaller than a bread
box.

The PRO-96 can be enabled on MilAir, using Win96 software. It works very well in fact!

Another consideration, if money is a consideration, and you don't need digital, is Radio Shack's (GRE Mfg'rd) new PRO-97. MilAir right out of the box, and on sale right now for $179.99!

Don't panic. Wait awhile until all the dust settles. You are not the only one experiencing problems with that system, and I have a gut feeling it will get sorted out soon.

Did you check Ebay?

I wanted an R7000 and found me one for cheap on Ebay.
The remote was damaged in shipping but otherwise, I have a great R7000 with
a repaired remote!

The remote just needed some super glue and is working well.
Great receiver!

Crud,
I built a detachable plate for my old BC-220 back around April of 1994 I think.
I mounted the radio under the dash and extended the keyboard and display wires to the dash.
The display was just above the steering wheel where the gear indicator would be on a tree shift.
The keypad was just above the factory radio mounted in a factory wood grain panel.
The volume and Squelch controls were mounted just below the factory radio and the speaker was wired into the cars sound system with switch that would select radio or scanner or both.
I had to modify the factory radio for this.
It also had a battery backup under the dash that provided power to the scanner and car radio as well as alarm system.

If anyone remembers SCAN magazine, I won an award for this design!
I was even asked to be a technical writer for them but I declined.
I'm not sure how much longer they (Scan Magazine) lasted after that.
They sent me several issues of the issue that I had my winning entry in as well.

I also was the one who found that a PRO-2004 could be expanded to 400 channels.
I'd imagine that someone else will try and claim that but I can still dig up original text from my old color computer to a local BBS explaining how it can be done!
I'm talking before the internet and when everything was a BBS or bulletin board.
Some of them were fido net boards
Somehow along the transfer across fidonet boards, I lost creditability as the one who figured this mod out.

Am I pissed? No - but I'm disappointed!

3777. New home has Housewide stereo, what do I need?

Newsgroup: rec.radio.scanner
Date: 2005-09-20 15:18:28 UTC
From: brettjbyers@gmail.com
Message-ID: <1127229507.981016.45840@g43g2000cwa.googlegroups.com>
Source record: 12039

My wife and I just bought a home with a housewide stereo system which the previous owner says is "plug in play"- not sure if that is more than just marketing. The basement has three Bose amplifiers which run to speakers in several rooms. Each room has a Bose volume control, and some rooms have input/output jacks which the owner said are for things like a cd player but not a stereo.

I "think" I need a pre-amp to plug my DVD player, Direct Tv, etc into. And if I understand this stuff correctly, I need to scrap my receiver and if I want FM the I need a "tuner"? But that FM is less important.

Do I sound on track? And if so, can you recommend a decent preamp at an affordable price (preferably below $200, please don't laugh).

If a CD player plugs in, then a DVD will too. Or, you can just run any
"Line out" on your receiver to those jacks and that should work fine
too. Since your receiver should work fine, the FM will too.

Now Surround, that's the problem, but regular stereo shouldn't be..

It can probably be made to *tune to* MilAir. It can't be made to have
any sensitivity there without major hardware redesign.

Radio Schack stores Pro-97 Purchasing saga

Flyer mentions free programming

Queens Elmhurst Jackson Heights
Rosevelt Avenue and 82 St
in stock but can not program for me
had to pass 50 feet from store anyhow

Manahattan
Herald Mall,
Herald Square
recently moved to new and bigger store in same mall.
Can not program
and have no cable
and no book
had to go by there to get something at 32 Street bargain stores

Manhattan
Grenenich Village
779 Broadway near 10 Street
store employee says
"the free progaming means we give you a number to call up and they
tell you how to program it over the phone"
Had to go by that area to go my bank anyhow

I am sure glad I did not make a special trip to those areas.

Is the program that came with last year's Scanner book from Radio
Schack good for this scanner?

3782. .SSD or .mem Files for SW Ontario?

I "tried" a 97 a while back. The store by me has always been "trying" to say the least. Every time I go in there it's all new help, which says a lot. I have a 95, works great. Decided I wanted another one in case something happened to the 95. Bought it, brought it home, programmed it, just as the manual says, it's almost the same as the 95. The police here are on a Mot. Trunked system. The scanner picked up the frequencies, but it would not "trunk", kept stopping on the control channel. I finally went up to the store with it, none of the people there had a clue. I gave up, ordered a 246T. Then a month or so ago I wanted another one of the RS 800 MHz

antennas. I have one, it does work better here, so I put the one I had on the 95 on the 246-T. Stopped in on my way to work to pick one up. Their web site said they had them in stock. Again, all new employee's. Antenna's were not where they used to be. Girl asked me what I was looking for, she had no idea what I was talking about. She looked it up on line, then said "oh yes we have 3 of them." Of course had no idea where they went, other 2 robots gave her a blank stare when she asked them, she pulled out her cell phone and called someone to ask, after listening to her try to explain to whoever she was talking to about what she was looking for, I finally gave up. Told her never mind, I have to go to work. I will just order one on line, which I did. I never have trouble ordering stuff from them on line, but I can't remember ever having a pleasant experience when I go into one of the stores. Either can't find what I need, or can find it, then can't get a clerk to ring it up. I often wonder how they stay in business.
As to the 97 if you want to listen to any Motorola 800 Trunked Systems you should read up on the Re banding of the 800 frequencies. From what I have "heard" the 97 will no longer be able to pick them up. Don't know if it's true, but when I started reading it, I was glad I bought the Uniden.
--
Experience is something you don't get until just after you need it.

As much as I would like to think the FCC will shut this guy down
permanently, I don't really think they have gotten that much closer.
K1MAN seems to be relatively fast on his feet because he knows how to
stretch the administrative process and just ignore rulings.
The FCC on the other hand seems to personify the hidebound federal
agency that is so tied up in its own administrative process that it can
only react sluggishly to violations of the law.

I've always wondered if Baxter sits up nights listening to himself
rebroadcast over and over and over.

Well Bill the biggest bang for the buck is still the Uniden BC780XLT
you can find them on eBay running from $175.00 to $320.00 for a new one.

Wayne Green had by far the best solution to the problem back in 1992:

Wayne Green W2NSD/1
WGI Center
Peterborough NH 03458

Sep. 13, 1992

"While I can appreciate your frustration with Baxter, which I share, your approach to disenfranchising him seems to indicate that you either do not read my editorials or at least don't remember them. I've God knows how many times been quite blunt about NOT annoying the FCC with our problems. That's not only a waste of time, it's downright dangerous... and can cause far more trouble than poor little Baxter. Please remember that we keep trying to convince the FCC that we are self-regulating. Note the term "self."

If a few hams ever want to get rid of Baxter that's not all that difficult... and you don't even have to pay a hit man to clean off 14,275. All it takes is a little creativity and some coordinated effort.

As a matter of fact it would be fun to wipe out Baxter. And you wouldn't even have to have a small group of like-minded hams drive to Maine with hack saws for his coax and tower or a concentrated campaign to turn his neighbors against him with propaganda. No, all it would take is a few hams with good signals and some coordination.

I'm sure you can come up with much more fitting tortures for Baxter than anything I could dream up, but my mind turns to getting the channel about ten minutes before his broadcasts with my own anti-IARN broadcasts. I'll bet I could come up with some material which would burn Baxter, yet would not quite be actionable. Or I might tape one of his broadcasts and just repeat it as a "service" right on top of him and wipe him out. I've got as good a signal as anyone and I'm only a couple hundred miles from him. Knowing the love they have for him in Maine I'm sure you can find one, two or even three

strong stations fairly near him to join in the effort to "help" him get his broadcasts out.

Of course if you don't know anyone capable of outsmarting Baxter, then you have no choice but to give up and take up stamp collecting. Baxter may be loud, but I haven't yet seen any signs of a three digit IQ behind the mess he's been making for several years.

If you do decide to actually do something instead of wasting your time on the FCC and ARRL, please let me know. "

Cheers ...
Wayne

Hi Gary,

For frequency information in your area, check out
www.radioreference.com and if you need help with operation of your scanner
you might do a search on the internet and type in the name and model of your
scanner and see what comes up?

Hi,

Some of you, hopefully many of you, may be aware of the existence of the "Amateur Radio Course" project which provides a number on-line and downloadable tutorials for the various UK amateur radio examinations.

Due to the sudden, unexpected and unexplained withdrawal of support by the company who up to now have very kindly hosted our web-site free of charge, and their even more unexpected failure to communicate with me regarding how we might transfer or redirect the URL which they registered for us but now will not let us use, our site is no longer available to the clubs and individuals who benefited from it.

Can you therefore help us and please publicise as widely as possible the following information.

The "Amateur Radio Course" which was located at www.ukradioamateur.org is now relocated at www.radioamateur.co.uk

There may be a number of functions that are not working due to the sudden move, but they will be fixed within the next few days.

It remains, as always, a non-profit making activity sponsored and supported entirely by the group of individuals who give up their time and resources free of charge to support and promote interest in the hobby.

I apologise for posting this message in so many newsgroups, but I need the new URL to be publicised as rapidly as possible.

Many thanks to you for your help, best wishes and 73's

It's never a good idea to use vigilante tactics to solve a problem. There are rules for which all of us must abide. One of those rules is that we must not intentionally block or interfere with another transmission that is in progress. We must all share the frequencies in an orderly fashion.

These are the rules. If we were to all ignore these rules and transmit whenever, however, and wherever we pleased, there would be mass chaos on most bands. The rules are structured and enforced by the FCC. I cannot condone any other approach to eliminating unruly examples like K1MAN--as frustrating as that approach may be.

They do seem to be few and far between these days, don't they?

When I went into the close by one that used to have someone who had a clue, they told me he had gotten a better job, and "nobody else knows much about scanners". No kidding. I was looking to get a PRO 95 for a friend and when I called, they said they had two.

Well, while I waited while he looked for one, I played with a PRO 96, and a couple of others, none of them programmed with much of anything at all. I had to ask the guy when he finally came out with one, "Why don't you have the displays loaded up with freqs so people can hear something when they look at them?"

"Well, it's pretty complicated!"

You know what that kid is going to be??

A lawyer...scary.

Considering that you're talking about NYC, it's not like there aren't
very many things he could program into it. (Can a Pro-96 really hold
all the frequencies NYC uses? Just programming the entire PD by hand
would take a day or so.)

>"Well, it's pretty complicated!"

>You know what that kid is going to be??

>A lawyer...scary.

Nah - lawyers and politicians don't have to know anything - for proof
just look at most lawyers and/or politicians.

Well, no, I was talking about Toledo, Ohio and it's many nearby towns,
about 2-300 easily programmed PS freqs.

The rules should also apply to W1AW who has also caused malicious
interference. The problem is W1AW is allowed to interfere with on going
transmissions and K1MAN isn't. the rules should apply to all. One final
note, rules are only valid until a court says otherwise.

Maybe at one time, but many radio operators have taken steps to
discourage such vandalism, such as running the coax via a path that is
difficult to get to without being noticed. Besides, Baxter is probably
someone that has video security around his station. Do you really
think pinning his coax is something you actually think can feasibly be
accomplished?

How about a grapple hook tied to a good strong truck, thrown quickly to the tower and it yanked down? "Possibly" done rather quickly and easily if one has a good throwing arm. OR how about a laser beam fired from a car on the street - using an AC Inverter for the power?

Seriously though - if someone wanted to "really" take him or his transmitter out - it could be done. No one is safe in this day and age. Hang in there, the FCC will do it..... I've seen them bust others and haul all the equipment away - towers included.

OK, so let's idolize K1DUDE and follow his example. We'll all start ignoring the rules and do as we please as long as we can get away with it. Before long, all amateur bands would be reduced to a bunch of "Citizen's Bands."

What's a "top post" and what section of the FCC codes is that rule found?
Once I know this information, I will comply fully with the regulation.

3822. Glass mount orientation

Newsgroup: rec.radio.scanner
Date: 2005-09-23 12:50:58 UTC
From: daedalusnj@earthlink.net
Message-ID: <1127479858.466610.114850@f14g2000cwb.googlegroups.com>
Source record: 11983

I had an audio shop install my PRO-2069 in my new car yesterday. They used a Valor though-the-glass scanner antenna. The sensitivity is just terrible. The receiver works just fine with the supplied telescoping antenna connected to the back of the radio. I checked connectivity by removing the antenna from the mount while listening to the WX channel. There is a difference, but it is not great.

Question: is there a specification on which way the interior glass mount is to be oriented? I seem to recall from the past that the inner piece had to be oriented properly with the outer. If that was wrong it would not work. I'm hoping that this is the problem. I don't see any 'orientation arrows' on the mount.

I'd like to get some input before I go back to the installer.

Thanks!

3825. Re: Glass mount orientation

Newsgroup: rec.radio.scanner
Date: 2005-09-23 15:44:36 UTC
From: Al Klein <rukbat@invalid.net>
Message-ID: <nq78j1dhtfg8udsfgjb8pi6bpqaomtq64i@4ax.com>
Source record: 11986

On 23 Sep 2005 05:50:58 -0700, daedalusnj@earthlink.net said in rec.radio.scanner:

>Question: is there a specification on which way the interior glass >mount is to be oriented? I seem to recall from the past that the inner >piece had to be oriented properly with the outer. If that was wrong it >would not work. I'm hoping that this is the problem. I don't see any >'orientation arrows' on the mount.

Look again. If there aren't any, it's probably a cheap knock-off antenna that works equally poorly in any orientation. Get a Larsen. (Even my 144/470 Larsen on-glass works pretty well on all bands, and their 150/450/850 works better.)

I hope the antenna is installed at the very top of the glass. There's about 10db loss between the top and bottom. And it's installed to sit vertically, right? Not at some "sexy" angle, like a lot of cellphone antennas?

>I'd like to get some input before I go back to the installer.

Next time go to a two-way radio shop instead of an audio shop.

Todd,

If you substitute "incidental" or "unintentional" for your use of
malicious, I might agree with your premise, at least on the surface.
However...

N9OGL wrote:

> The problem is W1AW is allowed to interfere with on going
> transmissions and K1MAN isn't.

...the only other thing that can be said in defense of W1AW is that it
is a *national* organization representing tens of thousands of hams that
is presumably "broadcasting" for the common good (and follows a regular,
published schedule, allowing others to dodge the "interference" if
they so wish), while K1MAN is a --single--private--individual-- who has
had some peculiar (shady ?) pecuniary interests associated with his
"broadcasts" in the past.

I have rented some GM models lately that have someone in the Window Tint
that is blocking RF. I cant use my XM radio & GPS sitting on the dash in
there new vehicles. I would suspect this would have a similar effect on
Glass mount Antennas...

doesn't matter Interference is interference, and ANYONE or GROUP who
causes interference should pay regardless if it for the "common good".
As for published schedule the FCC has stated that do mean squat, my
view is that all who cause interference should pay.

Some cars - I don't know about GM - have a clear spot, about 2" on a
side, at the top center of the rear window - to mount an on-glass cell
phone antenna. Since it's clear glass, you can mount any on-glass
antenna you like there.

The MetroWest Daily News, Fri, 23 Sep 2005 9:29 PM PDT
Police won't say if shot fired

http://www.metrowestdailynews.com/localRegional/view.bg?articleid=109686

SOUTHBOROUGH -- It has been four days since a report that a police officer fired his gun during a search for a suspect running away from a crash, but department officials continue to refuse to say if a shot was actually fired.

(A TV station reported that a shot had been fired into the ground - scanner also said a shot was fired)

Once you learn dynamic memory you'll love it. A system only takes as
many memory slots as there are frequencies in that system - no more 10
channels of a bank used and 90 wasted. You CAN have a few dozen LTR
trunked systems in memory at the same time now.

Todd. Sorry, bud, but your comments are disjointed and make little sense.
You really should step back a pace or two, look at your posts and give a good, long look at why the guys in this group are laughing at you.
In spite of your attempts to post what you see as facts, Todd, you are and will be looked upon as a Usenet fool.
I guess that I am, in your words, "your assholes just like them".
(I think you meant to say, "You are assholes just like them", but who am I to second guess you?)

And, Todd, you don't debate. You call names. We understand this, Todd, and realize that this is all you are capable of.

Why? Because you have no idea of what Debate means.

Grow up, Todd. Kiss your Mommy goodnight and shut down her computer and call it a night.

As long as you do not need Mil Air, they are great. If you are wanting trunked systems, and have used other scanners, they take some getting used to. If you program manually you have to kind of "un learn" what you knew. Took me a couple hours to get mine going when I first got it, but it is great because of how small it is. I found on mine one of the 800 MHz antennas did make an improvement listening to the 800 police. Others have said they did not help.
--
Experience is something you don't get until just after you need it.

I can't speak for the Valor antenna (although they very similar), but I know with the Radio Shack through the glass antenna there most definitely is a specific orientation called out in the documentation. I've read posts from folks who got it wrong and their symptoms are really poor signal strength until they re-oriented the antenna components per the instructions.

http://www.radioshack.com/images/ProductCatalog/Manuals/OME20-011.pdf

Good luck.

---

all the 2 pieces are more or less are the 2 "plates"
of a capacitor with the glass acting as a dielectric. So in short
the signal is capacitively coupled from the inside to the ouside.
There are no arrows on it because it really doesnt matter wich
corner of one side is matched up with wich corner on the outside.
As long as they are aligned and not off center or on a piece of
glass with wires in it or other material, it doesnt matter. Used to
have one for years and I change vehicles every other year so I
changed mine a lot. I routed the inside box for the easiest cable
run, still worked fine.

Uniden has a "fix" for this noise you are hearing. You can
download the updated firmware (V. 1.7?) (I believe) at their website.

I'm sorry...but I just can't resist here.....Toad claims to have been born in 1968 was it? And now he claims to be going to college, and don't seem to have a problem with living with his parents....Let's see now....that makes him....37....THIRTY SEVEN YEARS OLD.

Uh......at that age....

1. Why are you still in college?

2. Why do you still live with your parents

3. Just exactly what are you learning in community college Toad?

Just curious.

And please stop the juvenile pre-high school silliness and language, if you can.

I have decided to start a new net....I pick 14.321. I will be replaying ARRL bulletins and information from RAIN. Then claim it as original. I will also be using a prompt from Walter Cronkike, even tho his lawyers asked me to stop.

Then if anyone interferes with me I will send out "Felony affidavits".

What you think Toad? Looks like your future to me.

Does it fix the "down in the well" sound?

I guess my friend is about to find out..

Har. I have no idea what either of those did, but the second
reminds me of my first job. Our direct boss was as much of a nervous
narvus as I've ever seen. The office, in the early 60s, was wired with
an arrangement whereby his boss could call any one of my boss' four
peers into his office using a buzzer to each of their desks.

We found we could poke a pin into the right cable against the
wall and frequently set his buzzer off. Then he'd go into his boss'
office and get chewed out for being an idiot for showing up when he
hadn't been called.

We also found out that if you leaned back hard enough in one
of the office chairs, it made nearly the same sound.

I suspect the guy could have lived a few extra years if he
didn't have the four of us as his temporary summer messengers a couple
of years running.

>in 1968 was it?

There's no claim about it danny, check the FCC records.

>1. Why are you still in college?

Well Danny, to start I just returned to school last year. I had
attended a university once when I got out of high school which was back
1987. I know whith someone like you with your learning disability you
don't understand that if you want to make it in this world you need a
education, and not just a high school education.

>2. Why do you still live with your parents

Well first off a lot of people in this area still live at home. but to
anwer your question my parents are retiring a few more years and plan
to move up north, while I will be given the house, it kind of like a
inheritance. As I stated before I very seldom see my parents i live on
the fourth floor while they occupy the second.

>3. Just exactly what are you learning in community college Toad?

I was going to study physics but I've been really looking into going
into pre-law, currently I am in the "liberal arts" studies.

>please stop the juvenile pre-high school silliness and language, if you
>can.

See Dan You were nice to me so I was nice back, perhaps other could
learn from it.

Born in 1968, mental age about 6 years old.

> >1. Why are you still in college?
>
> Well Danny, to start I just returned to school last year. I had

^^

Toadie blathers, "with" irony.

> don't understand that if you want to make it in this world you need a

Dan has already "made it" in this world, stupid.

> >2. Why do you still live with your parents
>
> Well first off a lot of people in this area still live at home.

Only losers like you, Toadie.

> but to anwer

What's "anwer"????? Better take a remedial English course, Toadie.

> your question my parents are retiring a few more years and plan
> to move up north, while I will be given the house, it kind of like a
> inheritance.

Toadie is leeching off them until they croak or are in the nursing home
and he gets the house.

> As I stated before I very seldom see my parents i live on
> the fourth floor while they occupy the second.

Oh, is the basement considered the "fourth floor", Toadie? I'd stay two
stories away from an idiot like you if I were your parents, too.

> >3. Just exactly what are you learning in community college Toad?
>
> I was going to study physics but I've been really looking into going

Given your communications skills you should concentrate on remedial
English.

>

No dan, but I will talking about this weekend on my show and how people like you and your little bitches on here don't need to be amateur radio operators. I will also be talking about the CC&R rules congress is trying to pass and how if amateurs treat other amateurs like shit they really don't deserve that bill.

Hello:

Would like to try out the Acars decoder called "Kracars".

But, can't seem to find a link to download it.
Also, I understand that there's a "new" Windows based version of it; the original was DOS based.

Can anyone help me out with a link ?
Is there truly a Windows vers out now ?

Thanks
Bob

So if someone disagrees with you then they should be prevented from
being an amateur radio operator. Sounds like that denying of freedom of
speech you keep yapping about. You really are a turd.

Why would one that has such limited oral communication skills host an amateur radio talk show? That must be a hoot! Do you use such vulgarity on the air? I'm surprised that the FCC has not clamped down on you or fined you for such language.

To K1DUDE, an FCC rule is something to be avoided and worked around at all costs. He has spent considerable thought and money resource on fighting the FCC to get his way. If he had that same passion about complying with the rules, I'm sure he could work with the FCC and still accomplish what he wants.

It is to late for him now. K1DUDE is the type of person that draws negative attention to this wonderful hobby. We need more positive examples if this hobby is to survive. I just think that, at some point, the FCC will give into the cellular, BPS, and other special interest groups and scrap the whole amateur program. Then where would be?

3931. analog or dig?

Newsgroup: rec.radio.scanner
Date: 2005-09-29 21:17:49 UTC
From: MnMikew <mnmiikkew@aol.com>
Message-ID: <3q33vtFct0pbU1@individual.net>
Source record: 11893

I found the freqs I need to listen to but are these digital or analog? Can I program these into my Pro-95?

System: Minneapolis/St Paul Metro/State of Minnesota
County: Hennepin/Ramsey & 13 other counties
Type: Apco 25 9600 baud
Use: State Patrol, Fire, EMS and Works

3932. Re: 10-codes losing popularity

Newsgroup: rec.radio.scanner
Date: 2005-09-29 21:24:01 UTC
From: Joe <jmp883@optonline.net>
Message-ID: <PXY_e.3034$dl2.1948@fe08.lga>
Source record: 11894

I've been a public-safety dispatcher for the last 15 years now for 2 agencies (1 full-time, 1 on-call), dispatching PD/FD/EMS. I disagree with the statement that 10-codes are losing popularity. At least in this God-forsaken Hell of northern NJ 10-codes seem to be holding their own. Both agencies I work for are in the same county of northern NJ and each of the 2 police departments use their own 10-code list. The FD in the full-time agency also has their own 10-code/signal list. The EMS unit uses some of the PD 10-codes. The dispatchers and officers use a mixture of 10-codes/signals and plain english. The supervisors, including the comm center supervisors, do not enforce the use of either style. Their only concern is that we are clear, precise, and professional-sounding on the radio. The on-call agency only has 10-codes/signals for the PD, and again there is no enforcement of either style, just be professional on the air. However, most dispatchers strive to be as professional as possible and use the 10-codes/signals.

From a security standpoint the 10-code/signals do nothing. Anyone who listens to an agency for even a short amount of time will be able to figure out what the 10-codes/signals are. We're all scanner buffs here and I venture to say that almost every single one of us didn't know what we were listening to when we first set up our first scanner. But after a short amount of time we figured it out.

My opinion is that 10-code/signals are fine for everyday ops involving just your agency. Those incidents that require multiple jurisdictions are obviously candidates for plain english. Again, security is not an issue here.....look at how many media helicopters, TV and radio news vans show up during a multi-agency event. Everybody is listening to their scanners...if they weren't they wouldn't be there. What is an issue is the ability for agencies to work together on a common frequency (such as SPEN in NJ) with no misunderstanding. If there is sensitive information to be relayed it can (and has been already) relayed via cell-phone or Nextel.

It'll be interesting to see what happens in the next few years. Now...can somebody get me out of this Hell that is NJ????? I HATE THIS STATE!!!!!

--
....lately it occurs to me....what a long, strange trip it's been.

Fine until someone gives a 10-xx (meaning I'm going to lunch)
in response to someone who thinks it means I'm responding.

Nice that they want you to be professional _sounding_, but
real professionals would clear up this "my way" childishness to avoid
confusion or disaster in a real emergency where multiple agencies were
thrown together.

Close, but no cigar.

For Otter Tail County, try
http://www.radioreference.com/modules.php?name=RR&ctid=1365

Neither department seems to have its own radio system. Maybe they're
both on ARMER.

TV.

BTW, "normal" scanners don't "decode" sideband or CW.

If you want to see other "modes", just look at the modulation
definitions at the FCC. Do you consider "speed radar" to be a mode?
How about radiolocation services?

"Dispatched by" and "on" don't mean the same thing - they could be on
ARMER, being dispatched by a county dispatch center. Look at the
Ottertail County listings in the FCC database and tell me which one is
Battle Lake or Henning - that would be "its own system".

Yes you can program those frequencies in, but you won't hear anything.

The Pro-95 won't receive APCO-25 properly.

You need to go digital.

My winradio, running in the background as I type this, has:
AM/AMN/AMS/LSB/USB/CW/DSB/ISB/FM3/FM6/FMN
then there are all the digital data, and voice modes.

I am a total amateur and know next to nothing about this. However, I bought a Radio Shack 2051 model "triple Trunking" scanner on clrearance for $150.00. I took it to a local electronics place and they programmed it for me with all the local channels I wanted. It came preprogrammed with many frequencies which work well, but now I have all the local frequencies programmed as well.
As I said, I know nothing about this. The man who programmed it said it was very similar to a Uniden Bearcat scanner in design, but used different software. He said that one advantage was that it would accept programming for EDACS, Motorola, and one other format and was one of the only scanners that would accept this programming without actually being within range of the signal broadcasting. So far I am very happy with it.

The Uniden scanners are the other type. :)

Enjoy.

And the modulation on the carrier is??? AM? PM?? FM??

What bandwidth is it?

There's a difference between the process of putting information on the
carrier and the format that information comes in. The OP was asking
about the physical layer, as specified by "AM/FM ..." etc..

Radio shack is having one of it's sales (couple of different decent
units for $150 or so).

Unless you are in an area going over to digital then you'll need to
pony up the bucks to listen.

Sounds like all hat and no cattle, as we say here in the southwest. A GOOD
dispatcher adapts to the circumstances. If you can't handle changing
circumstances, let somebody who can do the job.

Been there, done that!
A former PD dispatcher

Or how many years has he spent communicating with more than one agency
(and more than one set of codes) on a daily basis?

>Sounds like all hat and no cattle, as we say here in the southwest. A GOOD
>dispatcher adapts to the circumstances. If you can't handle changing
>circumstances, let somebody who can do the job.

Yep. I tell my wife about the bad accident with a few seriously
injured people (even though she's picked up most of the codes by now,
just hearing me on the cell phone), my OTJ friends in the city about
the bad 10-53/54 and my friends out here about the 10-10 with SPI. And
if I have to talk to a fire department dispatcher I speak English.

Come on - we have 5 year old kids who are multi-lingual. Adults can't
speak more than one "language"?

>Been there, done that!

The 'gummint should leave the decisions to the people who actually do
the job. At least in this case they finally got it right. Someone
must have been on vacation.

>A former PD dispatcher

One year old Uniden 796D for sale. I am the original owner and original receipt is available.

Like new cosmetic and operating condition. Has been used as a base unit only.

Original box and all accessories, AC adapter, manual, disk, mobile bracket, booklets etc. etc.

Presently programmed for the Hamilton Ontario area. Interested local buyers are wecome to try it out. Anytime is ok as I am retired. I can take a few pic's if requested.

Firm price: C$450. or US$370. Includes shipping. Paypal is ok.

Reason for selling: My interest in surround sound is in need of $.

Thanx,
Philip

The standard is APCO 25, which defines BW to be 6Khz and Modulation as
C4FM.

For more details see: http://www.apcointl.org/frequency/project25/

Again - what's the physical layer? Id the frequency of the carrier
changed? The amplitude? The phase? Some other characteristic of it?
The OP wasn't asking about the logical layer (which is where C4FM
sits), he was asking about the physical layer.

Unless it's modulated in AM, SSB (which is really AM or FM, but we
usually use the term to mean one AM sideband) or some weird modulation
I haven't heard of.

Digital is the format of the data being used to modulate, FM is the
method of modulation.

It's like English/French vs. VHS/Beta. Either language can be put on
either tape format. Any data format (analog, any form of digital) can
be impressed on the amplitude of the carrier (AM), the frequency of
the carrier (FM) or, presumably on some other characteristic of the
carrier, if someone can come up with one.

When I think about what parameters of a carrier could be controlled with a modulating signal, there's amplitude, frequency, phase, and waveshape, and there are numerous ways to modulate these parameters, both continuous and discrete. An example of waveshape modulation would be pulsewidth modulation (PWM). It is possible to encode information digitally by modulating any of those four parameters...it doesn't have to be FM. With more sophistication, you could modulate more than one parameter at a time to get more information out of a given bandwidth.

Have a look at "modulation" in Wikipedia (http://en.wikipedia.org/wiki/Modulation).

I just bought a Radio Shack Pro 94 scanner off eBay. I got it, started playing around with it, and everything worked. Now that I have had it for a week, I am beginning to wonder if it really works as well as it should. I haven't yet picked up any police conversations enough to verify what town they were in. It seems to pick up the Weather station reasonable well. I don't really live in the center of town, although that shouldn't explain the lack of police radio coverage where I am, so I took it in to the center of town near the police department and I started picking up more talk on the Police band, but nothing was received without a fair amount of static and breakups in the words.

I am just curious as to whether or not it is fucntioning well and how I can test it to see if it does have a problem.

3979. FS: 3 Gently Used Scanners

Newsgroup: rec.radio.scanner

Source record: 11841

Going through the shack and noticed I have 3 scanners going unused.

These are not start of the art, but work, and are good for general scanning applications, ham radio, marine radio, weather, emergency services, aircraft (PRO-2039) or perhaps getting a beginner started in the hobby. Used over the years in a non smoking ham radio enviroment.

The frequency's indicated are from the label on the rear of the scanner, or the posted OEM specs. I cannot advise on whether they are modifiable. None are modified. No boxes, paperwork, manuals, warrantees etc.

I'm not expecting high prices; would just like to pass these on to hobbyists, who can use them. So make an offer. USPS shipping costs, from the Seattle area will be the ACTUAL cost plus $1.00 for packaging etc.

If you need a picture, let me know and I'll send you one.

Email or post inquiry here is fine.

Radio Shack Pro-2039
200 channel, programmable
30-54 MHz
108-136.975 MHz (RS Manual, on the Site indicates it includes aircraft)
137-174 MHz
308-512 MHz
806-8239575 MHz
896-960 MHz
Condition is very good. Working. Mfg code 12A4
120 VAC only.

Radio Shack Pro-57.
10 Channel, programmable
30-54 MHz
138-174 MHz
380-512 MHz
Condition is good. Working. Mfg code 8A9
Operates on 12vdc. Includes 120v to 12dc adapter
Missing original, internal whip antenna, but has external antenna jack.

Bearcat 210
10 Channel
32-50 MHz
147-174 MHZ
416-512 MHz
Condition good. Working, needs memory back up battery.
120AC or 12DC
Missing 120VDC cord. (Scanner confirmed working on 120v)

Includes OEM whip antenna, external antenna jack.

Actually most digital schemes use PM (yes there is such a thing, Phase Modulation). At low modulation indices, with FM, you get Narrow Band FM, which is mathematically the same as AM with about 25% modulation. You can carry a lot more information more easily in a given bandwidth with PM than you can with FM.

3982. Australian Scanner - 24/7 Online Radio Scanner Locked Onto Queensland Police Service [Outer Southern Brisbane Suburbs and Outer Northern Gold Coast Suburbs]

Fellow Scanner Enthusiasts,

I have initiated a live 24/7 stream from my scanner located in Brisbane, Queensland, Australia.

I am broadcasting a 24/7 online radio scanner locked onto Queensland Police Service [outer southern Brisbane suburbs and outer northern Gold Coast suburbs].

Please use the following URL to listen to the stream: mms://scanaustralia8.no-ip.org:8080

Everyone is welcome to listen. Any constructive feedback is appreciated.

Regards

VKR

A common problem with portable scanners is that the antenna jack
connection to the scanner breaks. Take the antenna off and see if the
reception dies completely. If not, that could be your problem. (It
just has to be resoldered.)

If not, the front end could have a problem - damage from a strong
signal, detuning, etc. Or the antenna could be damaged. The scanner
should pick up signals from the same place the users of the system can
pick up signals without too much static and no breakup.

A rescue team with each member speaking his own language is a
disaster in waiting.. Or did your people learn nothing from the
screwed-up comms on 9/11.

Thanks for the reply Al.

I wouldn't have expected the signal to die completely when the antenna is disconnected, I would have expected to still be able to hear something. However, I tested my scanner by tuning and holding a weather station, and then disconnecting the antenna. The signal went dead completely, turning the Squelch down caused static, but I expected that. So based on that, the antenna connector seems to not be the problem. I'm going to play around with it somemore and see if I can deduce the problem anymore.

Thanks again.

Those political appointees couldn't get a paper bag to interop with a
bonfire to produce ash.

> But "the people who actually do the job" ouldn't even work each other on the same
>frequencies.

First, NYPD operates on 450 MHz. FDNY operates on 150 MHz. The
equipment isn't cross-compatible.

Second, the people who "do the job" of specifying the systems for NYC
are professional politicians, not professional communicators. Please
don't get me started - I spent 12 years pulling my hair out over their
supposed "expertise", buying systems that covered 25% of the area the
vendors promised coverage for, or portables that were "state of the
art" - in everything but providing communications.

Now NYS is putting in a MA/Com system for statewide interop. I guess
the question of who's going to pay for all the additional equipment
that every LE and FD in the state will have to buy (and then leave to
rot on a shelf unless it's ever needed, since very few systems in NYS
are MA/Com) isn't something that concerns them. And the fact that, in
the mountainous areas, the state couldn't afford enough coverage on
850 MHz.

There may be some states that have people on the ground making the
decisions, but the federal government and New York (both city and
state) aren't among them.

Michael Brown, anyone?

You quite obviously know nothing about the situation in NYC. But
you've evaded the question yet again - HOW LONG HAVE YOU BEEN A
PROFESSIONAL DISPATCHER?

You won't answer that one, will you? Because you aren't one - you
just know how to make things up and hope they sound good to people who
don't know the actual situation. Surprise! You've been found out.

Good diagnosis. At this point I'd actually measure the sensitivity,
but that takes some instrumentation. Maybe some ham in your area
could check it for you.

Media rate has nothing to do with individual cds/dvds and books. Yes it
does say not for advertising and the weight limit is 70 lbs. Rate is based
on weight. I suspect media rate in this case would be ruled proper by the
post office.

Gee I don't know, Since it has FM in the NAME maybe its FM.
Or perhaps you prefer the Emission designator of 8K10F1E.

I always thought Modulation and Channel access methods are typically
placed at layer 1.

Which is why the people on the ground, not the "Michael Brown
professional" types, should be making the decisions.

>And those who think that failure to standardize on a single
>protocol (the name of the thread, right?) are failing in their
>responsibilities.

The single protocol - PER SYSTEM (we can't have the same language
spoken on all systems in the universe) - is pretty well set. For
cross-system use, the "protocol" in this country is plain language
English. We don't need Michael Brown and his ilk (and you're numbered
in there) telling us how to do something we've been doing longer than
most of the people on usenet have been alive. No dispatcher worthy of
his pay check uses his department's codes when communicating with
another department.

You still haven't told us how much actual professional experience you
have. I guess "zero" is a fair approximation.

My book club supscriptions come with multiple boks in the box
and have flyers advertising other materials included. I doubt Scott's
prescription applies.

Source record: 11716

well, as of 0500 local time monday, Phoenix Police pretty much went 800 digital, closing all but 4 channels in the vhf spectrum (all the UHF channels are dead).

The original assignment of frequencies in the Phoenix Area had PPD on 19 assigned VHF chans and % UHF chans. Over the last 4 years, Phoenix has been transitioning to 800 Mhz Digital and was supposed to have "gone dark" on all chans in VHF/UHF by june 1 (as of this writing, they are 4 + months behind schedule).

so? whats next? fire Dept going Digital? that remains to be seen.

You sound like it's the end of the world.
There are a number of choices of scanners that will monitor the APCO-25
system that Phoenix using.
Move on to the next generation of scanning.
Eventually every area will go digital. It's inevitable.

GB

all fine and good. just 1 small problem: they are Encrypting their
emissions, so an APCO25 capable scanner really isn't all that good, now
isn't it?

> Move on to the next generation of scanning.
> Eventually every area will go digital. It's inevitable.

yeah, and if they go the current route that phoenix is taking, well,
scanning as we know it (or will comes to know it) will be a dead issue.

and anyone thinking of decrypting their emissions: think about the federal
laws you will be violating by doing so (min. 10 years and $250K per
instance just for starters).

a little hard to "move on" when the law says you cannot proceed beyond this
point.

According to the information I found,

http://www.radioreference.com/

Phoenix is not encrypted and is just APCO-25 Standard. Have you even
tried with a digital Scanner or did just assume that all digital is
encrypted. Most areas do not encrypt because of the extra costs.
Dig deeper and find out for sure, before you just give up.

>Best,

Once upon a time when I was taught physics, I was told that full wave lenght should be calculated by dividing the speed of a light (299820km/s) with the frequency(in MHz)/1000, so for full wave dipole it should be 299820*160.89/1000=1.864m, for half-wave dipole divide the result by two.

oh really?

I find it hard to believe you when the source of my information just happens to be the primary tech for the Phoenix Police dept radio maintenance office.

Standard APCO25 trunking routines are used to maintain compatibility in the phoenix metro area with several services, but phoenix police ENCRYPT their emissions as a matter of course using DES modules programmed into each handheld. The Encryption algorithm they are using was not (and will not be) discussed for open (read that as public) consumption.

Also, before you ask who it is I have spoken with per the PPD radio division, he has requested that I not use his name in any way, shape or form.

as for the argument against "extra costs": Phoenix Police had an outlay of $4,000 per radio plus the $27 million invested in contract with motorola to install the new "trunking" system. A standard trunking system (using only APCO25 routines and analog FM) runs roughly 1/4 of that and $500.00 per handheld.

Any receiver that will receive SSB will also receive DSB, since both
sidebands are the same. ISB too, but only 1 at a time.

They can do that to a digital TRS, they can do it to an analog TRS - they can even do it to an old analog radio on a conventional frequency. One has nothing to do with the other.

The K-500 was designed to use four rechargeable
AA NiCd batteries for memory backup. The scanner must remain connected
to a voltage source for several hours to keep the batteries charged.

Inspect the batteries once in a while to make sure they haven't
leaked. Another caveat is that plastic battery holder inside the radio
can crack due to pressure from the spring contacts. Mine cracked.

It doesn't have to be - DES is a published standard.

BTW, did he tell you that the handhelds have a switch allowing the
user to decide whether to make a transmission in the clear or
encrypted?

Hi,

This is a request for minor software testing help from Icom radio owners.

If you own an icom radio that has a serial cable connected to your computer, I could use some help testing a little tool I wrote. The purpose of testing this tool is to see if my serial code works with your computer and radio.

I'm trying to test a part of SR-Pro that interfaces with ICOM radios. This test tool has code that will be used inside SR Pro after it is finished being tested.

I will also be adding support for other radios but I'm starting with ICOM since I have an ICOM hooked up to the PC right now.

Any help would be appreciated.

Thanks

I own a bunch of them. I have, at one time even worked on them.

The current model of motorola radio being used here comes in several
versions. PPD uses the upper line version (complete with encryption
capabilities, cellular capable, etc). the low end of that particular line
of radios runs about $750.00/each.

to say I don't know anything about motorola would be false. I do, however,
know more than some and not as much as others.

how hard is it to modify an older model radio to do this?

most of the radios I have run across with encryption capability have a place for it on board (as a removable module). encrypting outboard to the radio (say at the audio input) and decrypting same are a bit more complicated. you may think its easier, but when you look at all the extra stuff you have to mount on the radio (or plug into it), it just isn't worth the problems that can come up. Building in as a removable module BY DESIGN removes a lot of the complexity and additional problems encountered by "outboard, non-standard" equipment.

and yes, they do have a lot to do with each other. "integrated" systems (such as those I have described) are far more reliable and less prone to "add-on flaws".

in their case, its not a switch at all. its a programming function (and is
generally left on). Also, it appears that this is not a user controllable
function (according to a half dozen cops I have asked the same questions
of, they all report that the radios are programmed fro them and that they
are instructed never to alter that programming).

Oh, I hope it's not bugs in my prog. If so, I'll have to
figure out why Win/ME is different. Supposedly it should
even work on '95, but that might be too optimistic.

I just uploaded another copy in a zip file which is a debug
build with more error checking, (and no longer needs the
.dlls). If you happen to get a chance, could you try the
debug version on Win/ME to see if that one crashes or
reports any errors? If you get a chance, that would be
great. But you've already helped me a lot and I really
appreciate it.

Dave

wonder how the PPD police chief would react to a copy of this thread
and whether he'd consider a counseling session with his "primary tech"
on department policy about disclosure of technical information.

First, where do you live? Do you live in a large urban area, or in a rural area? Where you live will be a big indicator of what there is to listen to, and what sort of scanner you'll need.

What sort of communications are you interested in listening to? Emergency comms only, or are you interested in hearing military air comms?

Lots of people use computer software for scanner programming. With today's scanners, you really need to read all the documentation that comes with them so you don't get frustrated.

It's a BIG pain in the ass.

But it helps if you have programming software for your scanner. And the right in put information everything has to be right or it wont work. And read the book 20 times to begin to understand it.

2808 divided by the frequency in MHz will give
the length in inches for a 1/4 whip. Roughly
17.5 inches. Times 4 will give you a full wave.

Can't understand why you would want a full wave
whip. The impedence would be very high and
would not match a scanner or two way radio. 1/4,
5/8, or 3/4 in much easier to match.

Http://www.butelsoftware.com

I have this software and use it with my Uniden 250D. It works good and much better than the uniden software that they make for it. You might look at the Uniden 296D or the new 396T, BUTLE has software for them to.

I have used scannerworld.com for years and had good luck with them, But there are others.

Have Fun

You need to reduce that number by 5% for typical vertical whip antenna
calculations.

> Jeesh, where does a beginner start? Digital, trunk tracking, which
> scanner? How do you program these new high tech scanners? Please help.

Digital? Works only with APCO-25 systems, mostly urban areas, but not all
urban areas use APCO-25.
If you find that your agency uses ProVoice, you're out of luck.Scanners are
deaf in trying to hear Pro-Voice systems as
the system is proprietary and no store bought scanner can listen in to it.
Some use Motorola systems which if they
are analog can be heard. If there's no digital system within 10 miles of
where you live, save the money and buy
an analog type scanner.

Trunk Tracking? A must in urban/suburban areas since many agencies use
frequencies subdivided to many talkgroups.
Takes a bit of programming to seat the frequencies and set talkgroups, but
works nicely when set properly.

Trunking can use a control frequency and a few others in a series to build
the environment upon which many talkgroups
exist. Think of one talk group for fire, another for garbage, another for
city buses, and another for road crews. Each
is seperate from the other. Trunk tracking allows a person to keep one or
more talkgroups on to listen to.

Programming? Either the finger dance or use software such as Win95 for the
Radio Shack Pro-95/96. Butel has
reasonably good software but it's not the only option out there.

Read the manual 10 times. Scanners have notoriously badly written manuals.
Some are worse than the manuals that
come with software.

Product? Depends. Two choices. Uniden or Radio Shack.

www.uniden.com

www.radioshack.com

>Digital? Works only with APCO-25 systems

APCO25 isn't the only digital standard.

>mostly urban areas, but not all urban areas use APCO-25.

And not all rural areas use analog. There's no correlation between
"urban" and "digital".

>If you find that your agency uses ProVoice, you're out of luck.Scanners are
>deaf in trying to hear Pro-Voice systems

Not deaf, they just can't track them.

>the system is proprietary and no store bought scanner can listen in to it.

No scanner can, store bought or handmade.. Only ProVoice radios can.

>Some use Motorola systems which if they are analog can be heard.

Or if they're digital.

>If there's no digital system within 10 miles of where you live, save the money and buy
>an analog type scanner.

Unless there's a digital system within reception range - which can,
under the right circumstances, be as much as 50 miles - or more with a
good outside antenna.

>Trunk Tracking? A must in urban/suburban areas

And rural areas in which trunking systems are used.

>Product? Depends. Two choices. Uniden or Radio Shack.

Actually GRE and Uniden. Some of Radio shack's scanners are GRE, some
are Uniden.

Another consideration is to make sure that the scanner you buy will
(probably, since no one can say for certain yet) survive rebanding. It
doesn't make sense to buy a scanner that may be obsolete in a few
months.

That old nonsense again?

SWR isn't directional. Of course impendence matters, unless you don't
care how much signal you lose between the source and load.

A SSB receiver is one that has a bandwidth narrow enough to receive
only 1 sideband. If it's 6 KHz wide it's a DSB receiver. (Yes,
almost any ham receiver is either SSB or DSB, depending on the filter
you have running at the moment.)

Of course finding DSBSC signals on the air today is a bit difficult.
(They used to be much more prevalent, but ARC5s are expensive antiques
today, not cheap transmitters. And is there still 1 operational
DSB-100?)

>> Motorola 800 MHZ handhelds for $500?

>the basic, no frills model ,yes. I have 3.

Read what you wrote - APCO25 trunked radios - that's not your basic,
single channel analog FM radio, which is "no frills". And "APCO25
routines and analog FM" is something Motorola never heard of. APCO25
is a digital format.

It's my bug until I prove otherwise...unfortunately. Some
people say "don't use overlapped I/O when using serial
ports". Others (including Microsoft) say to use it. Who
knows. I'll get it fixed in time by the "puling out hair and
banging my fists on the table" method.

I've been doing serial I/O (in software) since before BASCOM, yet I've
never come across "overlapped I/O", as a term. Do you mean handling 2
ports simultaneously? What language? How are you doing the I/O?
(ocx? raw code?) (The program I'm currently working on does serial
and internet simultaneously, but that's not the same thing.)

Got it working on Win 2k, XP, Win/Me and Win98. Thanks to
some nice people who volunteered to help test it for me.

Regarding overlapped: If overlapped I/O is not used then
there is no way to cancel an I/O operation because the
thread is blocked. WIN32 has a CancelIO function in the same
API but CancelIO cannot cancel I/O on another thread, only
the same thread. That makes it a real pain in the ass. But
overlapping allows the programmer to break the I/O off and
clean up without having to be in the same thread, AFAIK.
That's why I had to use it in this case.

Ah yes, that old nonsense again,

Yes, it is true that you will not damage a receiver with impedance
mismatch, but you will have less signal. Signal budget, system budget,
call it what you may.

And the beat goes on . . . . .

Seems like plain old polled I/O - you can cancel any time the I/O
routine is still in the wait loop. The last time I did that, though,
was under DOS 2.1, so I have no idea if it can still be done in a
Windows API.

I've owned both Uniden 380XLT/296D/and now BCD-396T. All reviews I've
reed on both 296D and 396T, they came on top.
5500 Channels (never run out of room) & includes 3 recharable batteries
belt clip, software (d/l from uniden which suxs, ARC396T way to go)

Their are some issues /w 296D need be addressed & to fix (APOC-25),
doesn't sound all great @ times and garble.

Hopefully uniden comes out /w europe version soon.

>Windows API.

You can poll the serial port in Windows but it's not as
efficient as waiting for an event to happen while sleeping.
Normally, Windows wakes you up when the char arrives at the
serial port.

The way I set mine up is to issue a read of one byte while
in a loop. The loop is sleeping on the read command until
the char arrives. There is no CPU needed to poll since the
loop is asleep.

It's not a very easy to use API as I just found out but I
only have to write it and debug it once. Now that I have
something that works, I could send yo the source (in C++) if
you want to see what it looks like. It's a C++ class called
CComPort and it has 2 commands, ReadRxBuffer and
TransmitData. Both can be used simultaneously from different
threads without interfering with each other. It's quite nice
because I can use it for anything that needs to access the
serial ports without having to rewrite anything.

Well, it's late. I better try to get to sleep now. (4:40 am
Pacific time). I'm up late as usual.

From: DougSlug <dougslug@hotmail.com>
Message-ID: <Q9S1f.12679$Ge5.10908@fe10.lga>
Source record: 11784

Assuming they are analog trunked systems, you can still listen--you just won't have the ability to track the conversations by talk group. Since the R20 has lots of memory banks, you can assign just the frequencies for a particular system to one bank, then scan that bank or scan in bank-link mode to scan multiple systems. You will have to mark the control channels using the PSKIP function to avoid always stopping on them (and blasting you with the horrible digital hash).

Scanners with trunk-tracking will allow you to set up and label talk groups, then follow conversations by talk group so you can understand what's going on better. They will also automatically find and skip the control channels. The drawback with using a conventional scanner for listening to trunked systems is that the control channel often skips around to different channels, and as a result you have to manually mark them for skipping and remember to clear the skip markers for the previously used channels so you don't miss anything.

I assume you didn't find out about the use of trunked systems in your area until after you bought the R20...that sucks. One of the often repeated pieces of advice given in these scanner groups is to research the comms in your area before deciding on a scanner to buy. I know that isn't helpful for you now, but look at it this way: now you have a good reason to go out and buy another scanner!

Regarding software for the R20: I suggest joining the Yahoo!Groups "IC-R20" group. There you will find some software approaches for easier programming using just a standard USB cable. Also look here:

http://pages.videotron.com/scanman/R20Page/R20page.htm

Atlantic Electronics is a Silver Spring, Maryland company who makes
primarily signal monitor accessories for receivers for government
agencies. They also make other types of special purpose devices all as
accessories to receivers, as well as line of antenna multicouplers.

The products are designed and sold exclusively by www.cse-assoc.com,
and he generally deals only with government.

The Atlantic Electronic products are superb, often copied.

The software, I believe, is to port the I.F. of the receiver over to a
laptop for an on-screen analysis. The hardware boxes all have CRTs or
LCDs for display.

I have a control that works pretty much the same way, except that the
Tx command can't be recalled - but I don't think I'll be needing that
capability.

I wouldn't mind having the code anyway, just in case. If you'd send
it to "Al at Webdingers dot com" (standard munging), please?

That area could still use some work. The attack time on the AGC is
still way too long. It still has problems with systems that aren't
set up in the standard manner, both 3600 baud and 9600 baud. And the
little speaker in the little plastic box still sounds like a little
speaker in a little plastic box (which a good external communications
speaker fixes).

But it still has features that the Pro-96 lacks and the total price is
a bit lower (batteries, wall wart, cable, software).

Oh, and it has a real belt clip, not something that's only good enough
to allow the scanner to fall off your belt.

All in all, I'd say the 396 is the better buy.

thanks for that info about one of the many companies named Atlantic
Electronics Steve. the only company, by that name, I was familiar
with (with software) was the well known one that has nautical
navigation / gps tracking hardware and software. their navigation /
tracking software is widely used , and VERY expensive ! I know
several people that use it myself. http://www.ael.ca/index.php

then there is also the well known Atlantic Electronics
from Palm Beach, Fla ..... but as far as I know , they only have
electronics parts and services and don't sell software products.
http://www.atlantic-electronics.com/ , not sure about that , tho.

of course there are 1000s more companies with that name , but those
two are the only ones I routinely run across.

I'll make a note of those Atlantic Electronics products at CSE .

cheers
k

Thanks Doug.
So far, only one agency in this area use the digital trunked system, so at this point I am dealing with analog. However,I suspect that more and more agencies will use the digital system in the future. The R-20 will be nice for rural scanning, and I'm not sorry I bought it--good for shortwave also. I knew at some point I would have to buy a digital,anyways.

You can't assume that any filter over 3kHz or so is symetrical about the
'carrier' frequency just because that is the normal configuation of consumer
equipment.

Just for fun I am currently listening to an LSB conversation on 3763 kHz with
a 7.5 kHz filter and I cannot hear any sign of the conversation on 3765 - but,
the noise is a bit higher due to the wider filter. I wouldn't normally do this
but just had to try it. Of course, if I select DSB or ISB I get both signals,
although the 3765 conversation is inverted and shifted in frequency.

I don't know how much DSB is still on the air but a quick google search for
"double side band' gets over 12 million hits. It may not be encountered in

normal voice communications on HF and scanner frequencies but it is hiding in other places and frequencies from a quick look at some of the hits.

Dave

Sure 396T is great as long as you listen to only ONE APCO25 system.

If you program multiple systems, you have to constantly fiddle with
the settings to hear anything with decent audio.

The audio still SUCKS on uniden products.

PITA.

You can't assume that any given SSB signal will fit in a 3 KHz
bandwidth, just because all current signals do.

But I can assume that all filters currently in production are
symmetrical about the center frequency within 10% - because they all
are.

>Just for fun I am currently listening to an LSB conversation on 3763 kHz with
>a 7.5 kHz filter and I cannot hear any sign of the conversation on 3765 - but,

With what receiver and which filter? What kind of detector? I can
design any number of receivers that will do what you claim, but that
doesn't negate the fact that the standard filtered superhet SSB
receiver will receive a signal on the "wrong" sideband if the filter
is wide enough and the detector is set correctly.

>I don't know how much DSB is still on the air but a quick google search for

I said DSBSC, not DSB. There's loads of DSB on the air today, it's
just not DSBSC.

4087. Software to decode the 1090MHz tone-bursts aircraft transmit ????

Newsgroup: rec.radio.scanner
Date: 2005-10-09 08:42:00 UTC
From: Andy100 <andy100@aog.com>
Message-ID: <dial47$8jk$1@newsg3.svr.pol.co.uk>
Source record: 11799

I guess i'm right in thinking the answer would be NO for this but, does anyone know if there is any software to decode the pulse tone sent out on 1090MHz by most aircraft. I know there is a company who sell a unit for
£500, which decodes onto a radar screen, this is what made me think that there might be a bit more involved than just getting a hold of 'Free Software' !.

Anyway, just like we can now decode pager messages, ACARS etc, i thought maybe somewhere this software existed. I don't mean free software which will place the aircraft on a radar screen, but just simple software which would at least decode what flight number the aircraft was at least ?. I can pick the signals up no bother, would be interesting to decode them !!

Cheers
Andy

4088. Frequency lists (mainly data Pocsag, Baudot, SW, VHF/UHF etc etc) ?

Newsgroup: rec.radio.scanner
Date: 2005-10-09 08:52:34 UTC
From: Andy100 <andy100@aog.com>
Message-ID: <dialo1lej1@newsg2.svr.pol.co.uk>
Source record: 11800

I have just purchased a unit off e-bay called the "Universal M-400 Decoder". It supposedly decodes POCSAG (pager messaging), AUTOR, GOLAY, SUPOCS, DTMF, DCS, CTCSS, SWED-ARQ, FEC-A, ASCII, BAUDOT, FAX messages.

I have only been able to decode ACARS messages (Aircraft) up to now. Mainly due to the fact that i cannot find out any frequencies for the above types of broadcast. I have googled, but just keep getting sites which are either out of date, not there any longer or don't have any detailed info there.

I'd be eternally greatful if anyone knows of any links to websites which have a list of the types of broadcast listed above (both SW and VHF/UHF etc). I do have a SW frequency list, but it's 1994 and is way out of date. Even generally where abouts on the frequency spectrum to look would be handy !, i just don't have a clue.

Many Thanks
Andrew

The pocsag can be found around 150 to 155 mhz or so. The DTMF is the touchtones on your telephone. Very seldom used on the radio. Hams use it to control some repeaters but it is seldom used. CTCSS is the subaudio tones often found on many vhf 2-way transmitters. Not really much to decode other than the rewquency they are using. You probably have to tap off the 'discriminator' to get them as the start around 88 hz and quit around 250 hz. Thsi low frequency audio will not pass most audio stages in the scanner.
Baudot is seldom found outside the ham bands. Look around 14.080 to 14.100 mhz . It will be 60 wpm and 170 hz shift. Set the receiver for LSB and you may have to set the decoder to the Reverse position. I am not familiar with that converter.

Certainly most current crystal filters are symmetrical about the centre frequency, as are most people symmetrical about the centre (externally at least, and I'm not going to quibble about the orientation since I'm sure you know what I mean) - I wrote 'carrier' frequency.

I'm not sure about current mechanicals (somewhere I have an old Collins filter catalog with asymmetrical SSB curves).

As I stated in my first posting, a Winradio.

The rest of the paragraph is true if you are talking about 'the standard filtered superhet SSB receiver' provided that it is also fitted with AM filters which can be used in the SSB mode - not universally true. I can do it with my TS-450 but not my IC-706 for example. Not all receivers have the ability to select mode and filter independently.

True, my mistake in assuming DSBRC or DSBSC.

Here I am trying to make a simple point that one should not assume that just because a situation is common in one's own experience it is universal; and I make an assumption - Hoist with my own Petard!

And, I can't help noting how a simple point can grow into a complex discussion of differing views - I guess that's how politics and the law got started!

Hi

Thinking of buying a new scanner for both civil and miltary aircraft.

Options are:

1) Alinco Dj-x3
2) Icom IC-r5
3) Yeasu VR-120D

Any comments?

Thanks
Pat

Mechanical filters, ceramic filters, lumped-constant filters, op-amp
filters ... any discrete piece of hardware that's supposed to pass a
band of frequencies in the IF of a modern (within the last 40 years or
so) receiver.

>are symmetrical about the centre frequency,
>as are most people symmetrical about the centre (externally at least, and I'm not
>going to quibble about the orientation since I'm sure you know what I mean) - I

If you put the carrier (no need for tics - carrier whether suppressed
or not) at the center of the filter's bandpass, the filter is
symmetrical about the carrier - if you put the carrier outside the
bandpass of the filter are you going to claim that bandpass filters
don't pass signals? The filter is symmetrical about any signal
centered in the bandpass if the filter has a symmetrical bandpass - by
definition.

>I'm not sure about current mechanicals (somewhere I have an old Collins filter
>catalog with asymmetrical SSB curves).

Within 10%? None of mine were ever that distorted, although some of
the Collins filters were about the most asymmetrical filters I've ever
seen. They were designed that way. But the receivers were designed
to work with "asymmetrical" filters.

>> >Just for fun I am currently listening to an LSB conversation on 3763 kHz with

>As I stated in my first posting, a Winradio.

Oh, you mean that a DSP is capable of not hearing the opposite
sideband. Nothing to do with filters. "Filtering" isn't always done
by "filters".

>The rest of the paragraph is true if you are talking about 'the standard filtered

Is the tone burst the flight number, or just the squawk number? (The two aren't the same.)

If the format is known, the software can be written, if it hasn't been already, but knowing that the aircraft is squawking xxx wouldn't tell you much, unless they were declaring an in-flight emergency.

I assume the software has already been written. You can now buy a decoder box and software which will give you a radar screen on your PC. See http://www.airbandonline.co.uk/kapl_sbs1.htm. I think the box was just a fancy scanner with 1090MHz aerial, something that may just be the same as a scanner ?

Cheers
Andy

thank you both very very very much! i am very excited to try this out
and now with the pics i can do it today. is there a difference between
tp1 and tp2? the one in the pics is tp2 but mentions tp1 . is one
better than the other? can i do both? again thank you very very much.

Source record: 11674

Yes STEVE and KRAKULA thanks for the info.....it seems to be some sort of spectrum analyzer.....

Here's what was on the readme file (sorry I didn't see that)

Atlantic Electronics Spectrum Monitor Software
Distribution Diskette
Version 1.0, 8 March 1995

This software is intended to run on any machine capable of running Windows 3.1 or better; a 386 processor or above. High speed serial ports utilizing 16550 chips are preferred, but to take advantage of the internal FIFO, Windows 3.11 or Windows for Work Groups 3.11 must be used. A Windows mappable Serial Port, numbered from 1 - 4, must be provided to communicate with the SM-1073W Spectrum Analyzer engine. The PC software utilizes one of the Windows Timers, so this must be available.

Compression modes are available to reduce the processing burden on Windows without undue cost to the performance of the Spectrum Monitor. This is described both in the online Help system in the PC software and in the SM-1073W Technical Manual.

An extensive On Line Help system in the PC Software documents its features and how to employ them.

This distribution disk contains all the files necessary to install and operate the Atlantic Electronics' SM-1073 Windows Spectrum Monitor Software, which is referred to from here on as the SM-1073PC-W. This is a distribution disk, rather than an install disk, which means that a windows aware person needs to take the following steps to use this software.

1). Create a subdirectory to hold all the data files supplied. Please see list below.
2). Copy all the files from this disk to that sub directory.
3). Create a Program Group under windows, or add these programs to an existing Program Group.

The program may now be run. However to actually get meaningful data from the software, the SM-1073W must be attached to the PC and be running.

Files:
SM1073W.EXE An executable of the Spectrum Analyzer software itself.
*.DLL Custom Controls used by the

SM-1073PC-W.
SM1073.HLP The Help File which supports the
above.
ATLANTIC.ICO An Icon for use with these programs.
DDESVR.EXE An executable of the Poke Display Server.
DDESVR.CPP The source of the above, showing the DDEML
commands involved.
README.WRI This file.

The executable file for the SM-1073PC-W uses the DLL's
supplied above as part of the user interface for the SM-1073W. The
DLL's are copyright by their respective owners, Borland International,
and ProtoView Development Corporation. Distributed with permission,
only for this application.

When closing a running SM-1073PC-W session, a file labeled
"SM1073W.INI" will be created in the default directory or path. This
file remembers the parameters used by the SM software from one session
to another.
rom one session to another.

Congratulations. You've just totally proved the point I was making in my original reply to Glenan "Try it for yourself, you'll get results within millisecond, instead of days awaiting others to do all the work for you."

Glenan posed the original question 6 WEEKS ago. In your reply, apart from resorting to foul language, you repeated the same URL given him by others, and also the first URL to top the list in a Google enquiry.

I find it curious that the first and only people in this group to resort to swearing and name calling have all been Americans. You must be so proud.

Brad.

Yes, the WinRadio G303 and G313 appear to be the only commercially
available eceivers with genuine ISB and DSB modes. The DSB is actually
so good that you can receive standard AM with it and can hardly hear
any difference (i.e. the digital BFO inserts the carrier spot on
frequency, like with synchronous AM mode).

I did an interesting experiment with my G303e/PD by using stereo
speakers in DSB mode on an AM broadcast station, and you can actually
hear a phase difference variation between the two sidebands. This
causes an amazing "floating in space" audio sensation.

Peter

If you want to tap WFM (broadcast FM band stations - 88-108 MHz) - for whatever reason (you could decode SCA transmissions, for instance, but that's illegal in the US), tap the WFM point. For all normal "scanner discriminator tap" functions, tap the NFM point.

I have the same setup and also found that DSB on AM fascinating.

I have used ISB to set the master oscillator on frequency. Tuned to WWV,
ideally on 20 MHz, one can hear the beat between the two sidebands and
adjust the frequency until the beat is zero, or at least less than 1 Hz,
then this figure is used to offset the oscillator.

I have been pleasantly surprised with the stability of the receiver. From a
cold start through to several hours of operation the drift is substantially
less than 10 Hz.

That, along with the spectrum analysis capability and the almost infinitely
adjustable filters makes it a most interesting tool/toy.

Regards
Dave

This is a very good method. In fact I used CW for this (old habits die
hard), but I agree it is much easier with ISB.

>I have been pleasantly surprised with the stability of the receiver. From a
>cold start through to several hours of operation the drift is substantially

I found that too. The G303e manufacturer's specs says 10ppm frequency
stability, but I have found it to be much better than specified, at
least within my home temperature range.

>That, along with the spectrum analysis capability and the almost infinitely
>adjustable filters makes it a most interesting tool/toy.

Agreed. It is also fun to use. This radio brought me back to the
hobby, after a few years of absence.

First, find a reputable Internet seller by reviewing past posts in this
forum. Then buy it with a U.S. Postal money order. I guess I fail to
see the problem.

I find that I use the Winradio far more than my other receivers, and if I can find the money I think a VHF/UHF Winradiio would add a lot of versatility to my listening above HF as well.

Regards
Dave

You could just monitor the output of the detector with an oscilloscope.

Basically, they aren't tone bursts. There are two types of signal transmitted depending on mode. One is a pulsed carrier containing binary coded pulses 0.45uS wide. The other is a phase modulated carrier.

Most of the information transmitted is just numbers and if there are VFR aircraft around, a lot of those numbers will simply decode as 1200, with an altitude.

Hi back neighbor,

Tnx for the info. I have a PRO-96 and it's served me pretty well but
you know how it is... <hihi>

Glad to hear that Uniden did the right thing. While I'm fortunate
enough that I don't much bristle at a $500+ rig purchase, the faceplate
issue should just plain not have been present on a $500+ scanner. Hmm,
Christmas is coming up soon... I'd better start dropping the hints to
Santa Spouse. (...& Ten-Tec's just released their Orion II!)

Take care es hpe c u ota.

Source record: 11604

Hello everybody,

I found an old scanner today, an F.B Air RO-774EA (VHF)
It's equipped with 8 switches (from 1 to 8), each switch having 3 possible positions: A, A+B, and B (up-mid-down position).
There's a button that has 3 positions: Manual-Scan- Delay.

Also a Select button (a push button) and a red and green light, called "A" and "B"

If one of you know what model it is, could you tell me how to tune frequency?

Thank you very much,

Bruno,
Brussels

eBay Auction of Yaesu VR-120D

http://tinyurl.com/7ozrz

This is a great little receiver that has never let me down in terms of performing better than expected. Good for TV audio, FM and even AM if your willing to move the radio around a little for best internal antenna orientation. AA battery life is exceptional.

Thanks for looking...

Message-ID: <dip9vd$2pe$1@nwrdmz03.dmz.ncs.ea.ibs-infra.bt.com>
Source record: 11613

My wife is in Shanghai, China right now. It's her 40th Birthday on Sunday and as she was already going to a conference in Beijing next week, I've bought her tickets to go to the Grand Prix. It's such a shame that I now cannot be with her (due to work commitments).

Sorry I know it's off-topic but can anyone let me know when the qualifying is on (local time) so I can txt her? She's having a bit of trouble finding this out locally.

Also, [a long shot I know] does anyone know how I would go about arranging for a "Happy 40th Birthday Lynne from Xavi, Monty and Gareth XXX" message on the track scoreboard on Sunday? It would make her day.

Regards
Gareth

4153. scanner antenna for WiFi?

Newsgroup: rec.radio.scanner
Date: 2005-10-15 19:09:17 UTC
From: snow <dlessard1@verizon.net>
Message-ID: <xtc4f.900$%L.126@trndny09>
Source record: 11615

Anyone try a desktop scanner antenna for a
home Wifi network? Any improved results? I am trying to extend my Wifi
reception to the end of my house. The router is one on one end of the house,
but I can't receive a signal on the other end....about 10 feet short. I
can't move the router setup..so I am looking for an antenna improvement over
the cheap stubby antenna. Must be a way to do this without buying extra
routers, etc. Any ideas appreciated. I do have an extra desktop scanner
antenna I can dig out of the attic..lokks like it may fit the back of the
router..must be about 3 or 4 times the length of the stubby.

Snow,

Your scanner antenna is not likely to work. The cable for your antenna will have a huge loss at 2.5GHz, and the connector is also not likely fit the back of your wireless router, or it may damage the connector.

This may seem is a bit off topic, but I found an elegant and FREE solution to your problem. It can be used for scanner antennas too. You can find it on this site. http://www.freeantennas.com/prod03.htm . If you go down the page to the easy 12db parabolic template, you'll find the template called windsurfer.jpg. This is very easy to make. You basically fold it and put the other piece's tabs thru the slots and you have a perfect parabola. I printed this and cut it out of manila folder material and glued foil to the back of the unit. It works very well. Since you can scale this template (keeping the reference square, square) for any physical size, it can be used for Ham or other scanner frequencies as well. There are numerous other useful antenna designs as well.

4155. WTB:Windows compatible software for Optoelectronics 456

Newsgroup: rec.radio.scanner
Date: 2005-10-15 20:12:34 UTC
From: Mike <room4me@rocketmail.com>
Message-ID: <Pb6dnQ27wYz5_8zeRVn-vQ@comcast.com>
Source record: 11617

I have a Pro2006, with a Opto-456 card, and decided to fire it up with the computer attached. The software I got with the Opto board is dated. I see there are several programs available, but they all seem to have disclaimers on their compatibility with the latest Windows versions.So, rather than buy a new copy to play with and waste the money, I'm looking for a used copy. Scancat Gold, Probe or similar, which will work with the Opto-456.
Thanks.

Mike

Probe is by far and wide the most desirable software for that set up.
you can often get 80 to 100 channels scan rate with it.
(closer to 80 most of the time)

you can keep unlimited scanning freq files in your computer for an
unlimited number of channels, and Probe will convert standard
formats of FCC frequency disks to make things much easier for you.

the other programs like Scancat look kewl (their GUIs) but are
painfully slow as compared to Probe. Scancat , for example , makes
a nice " manual " control for your scanner , when you want to use it
as a tunable receiver.

have a look at the many 'reflectors' you can make & fit to wifi ducks.

and no most scanner stuff drops out at 1300MHz & even then it's crap!

Krackula,

Thanks for the feedback. Probe seems like a good choice. I looked at the Probe site the other day and they have a major disclaimer on compatibility with all the new Windows OS's. The interesting part, is they don't offer a demo version, so you can't confirm the compatibility. I don't mind buying software, but it's a gamble, spending $60.00 for their software. With a bit of luck , a used copy, might show up on Ebay or a ham site. Less invested should it prove incompatible.

I keep a separate computer running Win9 (with option for DOS only) to
run many ham/scanner/SWL-related programs that cannot run on current
versions of Windoze. Plenty of old computers are capable of filling
that role, for a cheap price.

Regards,

Eric

Mike I run Probe 7.0 on the 2006/Opto 456 combo with an IBM 390 laptop
and it is a match made in heaven.....Scancat Gold doesn't even
come close and Yes I've used both.....ScanCat might be "prettier" but
the Probe - wow. The logging events alone "dust" ANY software I've
used with my setup. And also I have used Probe from within XP also and
it worked fine , but I like the older laptops as to have it dedicated
to the 456....they also are a bit cheaper. Oh and I run the FULL Opto
456 , hope that's what you have (doesn't matter but you'll miss out
kind of sorta without being able to decode the
CTSS,DCS,etc.).....Probe - WELL WORTH THE PRICE my friend.....if
you decide not to go with the combo , let me know I would be glad to
"take it off your hands" as long as we could agree and all that happy
stuff.....

KRAKULA if you read this did you get the info on that disk I
mentioned.....I found a WORD document with some info on it.....

For a whip? Not unless you're running a ground wire alongside it. Did you mean correction for end effect? (The prop factor is affected mainly by the capacitance between conductors along their length.)

Well the consensus is Probe V7 is the one. I guess I'll splurge on that, and see how it goes.
Thanks to all who have taken the time and recommended the software.

Mike

I pulled my old Cobra 148 GT out of the trunk this afternoon thinking
I would hook it up and see if it still worked. I bought this thing
back in 1987 in a pawn shop in Everett, Washington. It worked fine for
years, but I haven't used it in a long long time.

I suspect the technology today is much much better now than it was
then.

Since I haven't a clue as to what the top shelf car scanner would be,
I'm asking for some recommendations.

Thank you.

Just a quick warning before you go installing a scanner in your car,
you might want to find out what the law is where you live. In may
places, putting a scanner in a motor vehicle is illegal.

If all you're interested in scanning is the CB band, you can get a
mobile CB rig that will scan all 40 channels without running afoul of
scanner laws. The Cobra 75 WX ST and Cobra 18 WX ST II are two mobile
CBs that I know of that have channel scan.

If you can legally have a scanner in your car or wish to do it
illegally (although certainly I don't recommend the latter!), the list
of possibilities is a lot longer. For whatever it's worth, the Uniden
BCT8 that I have covers the 40 CB channels, and much more.

FYI, the PRO-2045 used the same optional CTCSS board sold for
the discontinued Uniden/Bearcat BC9000XLT and BC8500XLT models.
Uniden identified the CTCSS board as a BC005.

Perhaps you can find a Uniden dealer who still has one in stock.

I enjoy listening to scanner feeds from other cities from time to time. I have found them through Google searches that lead to scanner sites, etc. One small fly in the ointment is that, as a computer user who uses Linux and who also happens to be blind, I can not presently use IE or Netscape or Mozzilla. There are interfaces for blind Windows users, but they really don't fit in to the UNIX world all that gracefully if at all.

By using the mplayer (movie player) program in Linux, I can listen to almost any Realaudio file along with many other popular streaming audio protocols such as WMA, etc. Now for the problem.

Several scanner sites such as the one for Cleveland, Ohio, NYC, Portland, Oregon and Tulsa, Oklahoma appear to have scanner links that are put together in some sort of Windows-centric way, per haps with javascript, such that I don't see a URL to an audio feed. It could also be that they use Shockwave which is one of the few formats that mplayer usually can't play unless one has built it with special drivers.

Does anyone know the actual link to the feeds for these cities?

What happens is that one gets to a link that says something like "Live Scanner Feed," selects it and there isn't anything useful inside.

On city feeds like Denver or Washington D.C, there is an .asx file or maybe a .pls file that can be fed to the mplayer program as the playlist option.

The Washington D.C. feed appears to be sponsored by the local chapter of the FOP and lets you listen to their digital system. Trust me. If you hear one, it sounds like nothing else. If someone is speaking on the radio and there is another radio nearby, the slight delay caused by the digital processing makes for a very weird reverb effect.

Surprisingly, there appears to be no present feed for Los Angeles. There used to be one at one time, but the fellow who ran it had a message on his site stating that it was down due to home remodeling.

Finally, a word of thanks to those people and groups who go to the trouble and expense of putting such feeds on the Internet.

Thanks for any ideas that might resolve some of these sites.

That's a Winamp feed. There are a number of reasons to use it, among them free alpha text streaming. (The listener can see what the scanner has stopped on.)

If you're interested in Long Island, NY, try
http://suffolkscanner.redirectme.net:8000/stream
I don't know whether any software you use will be able to play it, but the Windows Media Player link on my site
(http://www.webdingers.com/scanner.html) handles it.

It works like a charm. Sounds like a Motorola Smartnet
system. Here's what I did:

#! /bin/sh
mpg123 http://suffolkscanner.redirectme.net:8000/stream

Those of you who are UNIX devotees will see that's a shell
script, all be it a very simple one. I call it longisland so all I
need to do is type

longisland

at the shell prompt and I am hearing it. Many thanks.

Some of this is hard to get around from a technical standpoint,
though. Today's receivers cover such a wide portion of the spectrum,
there's no way they can be built with the same filtering that radios
had twenty years ago. The "tight front end" of receivers from circa
1975 would render todays receivers stone deaf across half their
receiving range. Hence the receivers today are more susceptible to
intermod, image reception, and problems like that, that the rigs 25
years ago didn't have because that stuff was filtered out, and the
radios then concentrated on a smaller slice of spectrum.

In other words, it's a trade-off. If you want your radio to receive
everything from DC to daylight, then you're going to have to put up
with some unwanted signals sometimes.

>The uniden BCT8 is a good one. I have the older BCT7 in my truck &
>really enjoy it. I use my RS Pro95 for trunking.

I have a PRO-94 and the BCT8 that are trunking scanners. I won't get
into the dozen or so older ones I still have and use (including one
rockbound desktop model), but my favorite is still the PRO-2045. The
only reason I bought the PRO-94 and then the BCT8 is that there are a
couple of agencies locally using trunked systems now. The BCT-8 is in
my van; I carry the PRO-94 at work.

I've had mine for less than a month, so I'm still learning it, but I haven't had any trouble getting it to follow the two trunked systems I have programmed into it (one EDACS and one Motorola), and of course it works fine on conventional repeater and simplex systems.

The BCT8 was bought to upgrade from a BC-750A in my van. I've described the BCT8 to friends of mine as a BC-750A on steroids. It uses a similar approach to the way it handles service banks and searching, but programming the private bank is a lot easier, and the frequency coverage and trunking on the BCT8 are superior to the 750A.

I did look at the BC-350C before buying the BCT8 but opted to add the trunking capability - the main difference between the 750A and the 350C was in the number of user-programmable channels available, so buying the 350C wouldn't have added all that much, but going to the BCT8 was a major upgrade in capability and, to me anyway, worth the extra cost.

With your permission, that's going up on the site for *nix users (attributed to you, of course).

And, yes, it's an 800 MHz Motorola Type 2 SmartZone system.

This unique professional recorder is a 10 hour long play and recorder using standard cassettes.
Can be used for "time shifting" radio programs. VOX (Voice activated recording) is perfect for scanner and shortwave applications.

You can see more info at the Viking site-
http://www.vikingint.com/viking.htm

It all comes back to me now. I tried

http://www.mattlogic.com/

and remembered that I had found that site some time last Spring, but
unfortunately, the problems of incompatible technology hit big time.

This isn't a personal gripe, but here is what can happen:

I have two browsers that work in text mode in UNIX. There is
one called lynx which is kind of the gold standard for text browsers.
It does just about everything well except javascript which it doesn't
do at all. The other browser is confusingly called "links" which
sounds the same, but obviously is different. The links browser does
do javascript but doesn't seem to be as good at taking a page apart
which is sometimes necessary to make things fit when they don't
normally want to.:-)

The links browser, while having some javascript capabilities,
misses the mark many times on problem sites so it only sometimes makes
a real difference. If I use links to go to mattlogic.com, the browser
sees the first page and kind of goes in to a coma in which all you can
do is shut it down.

If I use lynx, I get a message that says,

FRAME: Header
FRAME: LeftMenu
FRAME: Center

Viewing this page requires a browser capable of displaying frames.

Actually, you can look at frames just fine and select any
links you want on some sites, including this one.
FRAME: LeftMenu is what you want to see the resource selections.

It opens nicely up as follows:

Home
online scanners
chp cad Forums fire weather local weather CA Webcams

California Online Scanning
fcc frequency lookup feed status page Guestbook Get Firefox!

So, I selected online scanners and then Bay Area scanners and read:

BAY AREA ONLINE SCANNERS

SCANNER 1 SFFD & SFPD
SCANNER 2 CDF (Bay Area) & CDF (Sierra's & Northern Ca)
SCANNER 3 Bay Area & Central Valley FD's on VHF 1 & 2
SCANNER 4 CHP
SCANNER 6 Sacramento Trs, ALCO TRS & Livermore TRS

Of these, I selected

SCANNER 1 SFFD & SFPD

That's when things went South. The next page showed what appear to be trunk IDs

[EMBED]

This is a Uniden 780 Trunking Scanner that I have In the computer Loft of my home. I live in Livermore CA in Eastern Alameda County.

Right Speaker

Left Speaker

14800 SFFD-A1
14832 SFFD-A2
14864 SFFD-A3
14896 SFFD-A4

and so on. There were no discernible links below this list.

I even dumped the source, not to be evil, but sometimes, one can build an absolute link (one that actually works) from javascript's cute way of making relative links which breaks lynx. I didn't find anything so I don't know how the audio stream gets going.

This is by no means a unique problem to this site. The web publishing software these days is very proprietary and one has to really work to make it behave in a generic manner.

Anyway, that's what happened when I tried this site. One never knows what will happen exactly on any given site because some sites have plenty of graphics and javascript but are still accessible because the underlying navigation doesn't require a mouse or doesn't do whizzbang stuff to assemble the audio feed. You just have to try it and see.

My thanks to those who set up sites like this since it takes a lot of work and resources to provide this service. My real frustration is with Microsoft and other corporate types who dream up some of this technology with no interest or desire to try to make it

work for all. That leaves the web designers having to do lots of extra work which is unfair to them, so nobody should take these observations as a flame or put-down. It is simply a description of what happened.

http://www.radioreference.com/modules.php?name=TRSDB&sid=2707

Digital, but not encrypted, so you need a digital scanner. Radio
Shack Pro-96, Pro-2096 or Uniden BCD396T. Check the specs and what's
included in the price, though - don't go on price alone.

Thanks for the heads up. Now it works for me too.
My firewall was OK, the culprit was the experimental proxy server
that I've recently installed. With the old proxy server or without proxy
they do work just fine both WMP 6 and WMP 9 that I've tested.

Thanks again,

Sylvek

I have a brand new BC296D for sale, warranty never registered.

This unit comes with the AC adapter, original antenna, software, programming cable, all manuals and original packaging.

Unit is in flawless, perfect condition. (Did I mention flawless??)

I can send pictures to anyone interested.

Asking $500.00 USD, shipping to Canada and CONUS included. I will ship anywhere else as well, for extra $$. I will take an INTL money order from non-canadian buyers or certified cheque if in Canada.

I am located in SW Ontario, Canada.

I bought this about 2 weeks ago, and just can't justify the $$ to the amount of time I spend listening....(well...not to my wife anyway...)

Anyone interested email me at wtp07rsb at yahoo dot com

Randy.

Well if you could read the american language you would see that I was the buyer in all thoes feedbacks, and when you buy something a seller says is like new and it's really a hunk of non-working junk and you tell the world that fact, they get mad and write bad thnangs in your feedback.. So try reading the feed back next time and stop being a moron..... And yes all the programing software on the laptop would program from 1KHz to 1.3GHz and some like ARC780 or ARC898 will go from 00.0001KHz to 99.9999GHz But the unit sold this morning with a "Buy it Now $259.95" so your out of luck :P

4212. Improving airband radio reception

Newsgroup: rec.radio.scanner
Date: 2005-10-22 18:06:03 UTC
From: kevin@unseen.org
Message-ID: <1130004363.276531.327200@z14g2000cwz.googlegroups.com>
Source record: 11574

Hi

I would like to improve my airband reception for my local airfield (Sywell). Currently I can hardly make out what the tower is saying and struggle with 75% of aircraft as the voice signal levels dissappear into the noise levels. Most signals do activate the squelch ok, but the audio noise levels are just to high.

My current setup consist of a dual band (2m & 70cm) vertical fiber glass antenna (I can't find the exact details at the mo) on a 2.5m meter pole which takes the top of the aerial just above level with the neighbouring houses roofs. It then feeds into the loft with about 3 M of Y[1] cable, through a small lightening discharge unit (which I still need to put the ground connection in for) and then through 3m meters more of Y[1] cable. Then inside the loft room it goes into a panel mount BNC connector and through 1M of RG-59/U cable before going into the AOR AR900 scanner.

[1] It has no numbers written on it, but it is a 1cm diameter coax cable
original bought for amateur radio use.

I suspect the loft room is fairly RF noisy as it is my study including two computers, monitors, ADSL, wireless 802.11b etc. Connecting the scanner to mains (via it's transformer, or battery makes no difference.

I'm looking for a rough idea of how much the following options would improve my reception experience against the cost / difficulty of completing those changes:

1) Change aerial (must also be able to Rx & Tx on 2m and 70cm)
2) Raise aerial by 1m or so, so that it is above neighbours roofs.
3) Change aerial feed cable
4) Ground the lightening arrestor (something I know I need to do anyway)
5) Change Rx end BNC to BNC cable (is that the right kind of cable? Impedance mismatch?)
6) Change panel mount BNC connector (does this let noise in due to short unshielded bit of inner cable or impedance mismatch?)
7) Add a band pass filter for airband at the Rx end
8) Add a pre-amp for airband as close to the aerial as possible

Any other suggestions?

Thanks in advance
Kev

Just out of curiosity, you say the aircraft on the ground are noisy and the tower too. Are aircraft in the circuit area ok and readable or are ALL affected?
Silly question, but you are in AM Mode, aren't you?
The antenna you have is not designed for this frequency range, but ought to work well enough as I am able to listen to aircraft on a similar arrangement.
Further height will always help, especially as you want to hear ground signals. It will make little difference with airborne signals.
If oyu are having trouble with ALL aircraft signals, then you really need to consider relocating that antenna. Consider turning off some of that equipment to isolate the possible noise source that may be drowning them out.
If the signals are affected by local noise, a preamp will amplify that too.
Putting an airband preamp on won't allow you to use it for 2m and 70cm.
I don't understand the part about "short unshielded bit". None of the coax or bnc plugs should allow you to have any "short unshielded bits" and might be a starting point.
Grounding the lightning arrestor should make no difference to reception, only offer protection in the event of a local discharge, and it won't do much in the event of a direct hit, so don't place too much faith in it.

Brad.

Hi Brad

Thanks for the quick response. Yes I am in AM mode :) Aircraft on the ground are barely readable, the Tower is slightly better but still I can only make out 25% of what is said. In general flying aircraft are better, with 25% being very clear, but equally 25% being worse than the tower.

I will try turning everything off up here tomorrow and see if it makes a difference reducing the electrical noise.

The aerial is on the chimney, so about the best position I can get it other than on a longer pole on the chimney.

Pre-amp wise I could get it just where the coax comes in through the roof tiles, and then I could take it out when I want to Tx.

The 'short unshielded bits' - it is a Panel Mount BNC Socket, so the shield is twisted together and soldered to a lug on the outside, leaving about 1cm of center unshielded.

Other option I thought off was to take a dedicated airband aerial, soemthing like this:

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=5773226141

and either place that high up in the loft space?

Thanks again
Kev

That part won't matter. I was more concerned with poor terminations in the
feedline.

That antenna on ebay doesn't specify a length, but looks like a similar
style to mine. That's certainly where the gain needs to be. If you really
want to receive that airport, you could consider a short yagi, 3el perhaps.

How far away is this airport? What terrain between your locations?
Brad.

This is not an uncommon situation, I have encountered it in a couple of places I have lived.
The tower transmitting antennas may very well be quite a distance from the airport and if they are on the opposite side to you, or shielded by hills of buildings you could very well have problems.
Aircraft on the ground will likely be often blocked by buildings.
Airborne aircraft will usually be in your line-of-sight and easy to hear, but if they are low and on the far side of the field could pose a problem.

At my location I can hear most traffic at four airports:
One is very close and I can hear everything.
The others are some miles away and although I can hear aircraft until they are quite low I loose them on final approach or on the ground. One tower is very weak or inaudible. the other two just are not there.

Just because there are lots of antennas on top of the control tower, or near by, does not guarantee they are the ones used for normal transmission.
Several towers I have worked in only use the antennas on the roof for receivers or back-up transmission. the main transmitter site was usually some distance away.

Dave

>I'm looking for a rough idea of how much the following options would
>improve my reception experience against the cost / difficulty of
>completing those changes:

>1) Change aerial (must also be able to Rx & Tx on 2m and 70cm)

Not much change, since the antenna is really a random length (and a
short one) or wire at aircraft frequencies. Cost for a significantly
better antenna - significant.

>2) Raise aerial by 1m or so, so that it is above neighbours roofs.

Not much difference. See below. Cost - relatively little.

>3) Change aerial feed cable

Unless the cable is really bad, 7 meters of cable isn't going to have
too much loss at 100 MHz. Cost - relatively small.

>4) Ground the lightening arrestor (something I know I need to do
>anyway)

If a lot of your noise is from static on the antenna, this may help a
bit. Ground the antenna for a moment and see if the noise goes away
for at least a minute or two. Cost - almost none.

>5) Change Rx end BNC to BNC cable (is that the right kind of cable?
>Impedance mismatch?)

What's "BNC cable"?

>6) Change panel mount BNC connector (does this let noise in due to
>short unshielded bit of inner cable or impedance mismatch?)

What's the panel connector now?

>7) Add a band pass filter for airband at the Rx end

Noise is broad-band - it's on the aircraft band too. Cost -
relatively high.

>8) Add a pre-amp for airband as close to the aerial as possible

It'll probably increase the noise as much as it increases the signal.
Cost for a good one - very high.

>Any other suggestions?

1) Be aware of what kind of system you're trying to receive. The aircraft communications system is designed for 3 things:

a) air to ground communications
b) ground to air communications
c) air to air communications

One thing it's *NOT* designed for, except ar extremely close range, is ground to ground communications. (The tower can see the aircraft on the ground. Can you?) Unless you're within a km or 2 of the airport, concentrate on receiving aircraft that are a) not too high up and b) near you. Very few people have the equipment to DX aircraft signals.

2) Your receiver's AM detector may not be as good as an AM detector can be.

Hi

'BNC Cable' = 1M of RG-59/U

The BNC Panel connector is still a panel connector, ie an open backed soldered connector that does leave a short bit of unshielded core.

The airport is Sywell, about 5 miles away from me, a small local grass airfield. I'm looking to hear this airfield well as I want to do my PPL from there at some point soon. I will try and get a better idea of the terain between Sywell and myself at the top of Wellingborough later, but there certanily isnt a mountain between us :)

I'm thinking that a short Yagi might be the best bet for my situation, as from what you guys are saying there is nothing terrible in my current setup at the moment, and aircraft close to Sywell and the Tower at Sywell is what I really want to improve if I had to pick a more specific target to improve.

Comments & sugestions welcome.

Cheers
Kev

The loss will be considerable. Yagis are quite narrow band. For a few bucks/pounds/euros you can buy some aluminium tubing from a hardware store and build your own.

If the countryside around you is reasonably flat, it makes sense that you are having trouble hearing GA aircaft. The top mounted antennas are barely 5ft off the ground, the belly antennas merely 18" off the ground. That's not a lot of antenna height. Most GA aircraft coms run less than 10W.

Brad.

4225. Ontario Canada Ambulance Frequencies?!?!

$150-$175 if it's like new via Ebay. Add $50-$75 if it has an Opto board. Seen average 2006s for $100 at hamfests. Long way from the $400-$500 they were bringing a few years ago. I just found a PRO-43 handheld at a hamfest for $20. Luckily our local services still use a very small 2 channel trucked system.

I still don't quite understand this 'rebanding' thing. My current trunking systems go from 855.2125 MHZ to 860.9375 MHZ. I don't think this will be affected by the rebanding, but I'm not sure... The part I'm confused about is the frequencies above 860 MHZ as these seem to fall into the 'expansion band' part??

Thanks in advance for any clarification.

Or look for "broomstick and wire hanger" designs on the web. If you
have a long enough piece of wood for the boom and a few wire hangers
it'll cost you nothing and still work as well. Or you might look into
building a quad - more gain with less antenna.

Yeah, that's way beyond me..

Can ANYONE tell me with a fairly short answer if any of the below public
service (mostly NJ State) trunking frequencies will be moving?

855.2125
855.4625
855.7125
856.4375
856.9375
857.4375
857.9375
858.4375
858.9375
859.4375
859.9375
860.4625
860.9375

or Vineland NJ public service

856.4625
857.4625
858.4625
859.4625
859.9625
860.4625
860.9625

Thanks in advance!

I'm starting to use MySql to load the scanner database onto the site. You can see the latest listings for Northern Saskatchewan.

I you know of a good search script in .php let me know so I can use that too.

Also I have a Message board if you want to use it, it is generally for Scanning Shortwave Ham Radio and CB radio.

Thx

According to the list, none of them have to. That doesn't mean that
none of them will. Stations in the 854-861MHz range aren't required
to move.

Yes, they're on the fleetnet trunking system now.

If you do a google search you'll find them.

Mind you there's only one website that has all the information your looking for so I suggest finding that one.

Source record: 11598

Hello,

I bought a few used transceivers in a garage sale and it looks like they
were used for railroad communications. Fairly recent, they have approx. 40
channels each and a LCD display with toggle selection switches for channels
and volume. One is GE the other is Motorola.
I checked and they work perfectly but I do not want to interfere with RR
communications.
They seem to have a prong on the side of the portable that attaches in order
to be programmed.
Does anyone know what type of cable and computer program is needed to
re-program these units ?
Thank You

I have three of them now but I would advise you to invest in
a more up to date radio if you are going to part with a lot
of money. The pro-2006 is an exceptional performer for what
it was designed for but its now becoming obsolete. It
surely is a nicely made radio however and I think it is a
real masterpiece.

Best wishes..

For sale - Fairmate HP-2000 [AOR-1000 clone] hand held scanner.
Recieves from 2-1300 MHZ, no gaps [was purchased before the cell block].
Has 1000 channels, 10 search banks, 10 scan banks.
Selectable user steps, selectable modes AM/FM/WFM [no SSB].
Unit has some light surface scratches, and is in tip top working order.
The only flaw worth mentioning is the anntenna connector [BNC] is slightly loose - Not much of a problem if you don't plan on changing antennas frequently, and in any case its a matter of popping open the case and tightening a nut.
Runs on 4 AA batteries, and comes with protective leather/plastic jacket, AV power plug, instructions and a carrying strap.
Note - I installed a new keypad a couple years ago, as the stock one went bad, as keypads all eventually do, so this keypad should be good to go for quite some time. I anticipated at the time I found this one that it would be very hard to find another one when and if I ever needed one, so included also in another brand new keypad, ready to install when/if needed.
Pics &/or ebay selling identity available upon request.
Price $110.00, insured UPS shipping included.
Payment accepted - US postal money order, certified check [10 day hold on delivery] & paypal, as long as the paypal payment is not funded by a credit card [account balance only].
I am in the metro Detroit area, and will consider $100 if local pickup is an option.
Email any offers/questions to udontneedmyrealemailaddy@comcast.net .... And yes, thats a real email addy.
I use a comast identity that I use for a few months in newsgroups until it gets overwhelmed by spam, then dump it and get another one.

Regards

Hi

I liked the idea of the 'broom stick and coat hanger' antenna, but have strugled on the practicalties. I went through the design here:

http://k7mem.150m.com/Electronic_Notebook/antennas/yagi_vhf.html

and ended up with a very large (about 48" square) antenna that still complained it was to short and the elements too thin!

It also doesn't explain the driven element connection details.

Help please :)

Cheers
Kev

>and ended up with a very large (about 48" square) antenna that still
>complained it was to short and the elements too thin!

48" square? The antenna is 1" thick at the center (the boom) and
~1/8" thick for the rest (the element thickness). It's about 12' long
and 4' wide at the reflector end. You can shorten the boom by asking
for less gain - the gain is determined by boom length, but you can't
shorten the elements. 1/4 wavelength is fixed by the laws of physics
for any given frequency. (A quad is smaller for the same gain than a
Yagi.)

Try this - it's for 10dbd gain (~10 times the signal strength - signal
doubles for each 3dbs of gain) at the center of the band (122 MHz):

122 MHz, 8 Elements, 10.575 dBd Estimated Gain

Warning: The specified Gain of 10 dBd is too Small. Gain should be
greater than 11.8 dBd.

41.4 Degrees Horizontal Beam Width

44.3 Degrees Vertical Beam Width

N/A Diameter, Non-Metalic Boom with Insulated Elements. N0 Boom
Correction applied.

Electrical Boom Length of 148.9" (12' 4-7/8"). Allow for overhang when
cutting boom to length.

00.125" (0-1/8") Driven Element Diameter.

00.125" (0-1/8") Parasitic Element Diameter.

Cumulative Spacing-Element Name-Element Length

Zero Reflector 47-7/16"
19-3/8" Driven Element 47-1/8"
26-5/8" Director1 44"
44" D2 43-11/16"
64-13/16" D3 43-5/16"

89" D4 42-15/16"
116-1/8" D5 42-9/16"
145-1/8" D6 42-5/16"

>It also doesn't explain the driven element connection details.

You can use just about any driven element. The simplest one is to offset the 2 halves (the elements are all total length, except the driven element, each half of which is 1" longer than half the total length. Drive these halves into the boom about 1/4" apart, centered on the correct mounting point (IOW, 1 piece 1/8" in front of the 12-3/8" point, the other 1/8" behind that point). Connect the cable center conductor to one half, shield to the other half.

Or you could do this:
<http://k7mem.150m.com/Electronic_Notebook/antennas/yagi_vhf_feed.htm>

Dress the cable along the boom to the balance point, at which point you'll mount the mast, and dress the cable down the mast.

It probably won't be too great for transmitting, but it should beat the pants off the rubber ducky for receiving.

4250. AR8200 MK3 opinion

I'm new to this, but am interested. I was looking online at some portable scanners and found this one. AR8200 MK3

Is it any good? It seems to have a large frequency range (500kHz to 3GHz). I am not sure if the frequency range is what I should be looking at to determine whether it's a good scanner or not.

Any opinions? Comments? Advice?

What's the difference between a scanner and receiver? One of the key features for the AR8200 MK3 says, "Extensive search & scan facilities."

Sorry for the dumb questions, I am just so new to this I don't know the difference.

Digital systems - there's no frequency that's specifically digital.

And the AR8200 doesn't do digital and it doesn't track trunked
systems.

From what I've been reading, these two features appear very important
in this day and age.

So instead of the AR8200, I am starting to look at the Uniden BR330T. Is
that a decent enough one that'll keep me busy and interested in this
potential hobby?

That's too bad about the AR8200. Too bad it doesn't do digital and track
trunked systems. I saw a product that is capable of decoding the digital
stuff, called APCO 25 something or another. It was an add-on device. I
cannot recall the name of it or model number and can't seem to find the
web site anymore. Is it something that can be attached to the AR8200?

If you have no trunked systems and no digital systems you want to
listen to, it's not important - to you.

>So instead of the AR8200, I am starting to look at the Uniden BR330T. Is
>that a decent enough one that'll keep me busy and interested in this
>potential hobby?

If you don't need digital. Although it's really a BC246T with Nascar
stuff added. (You can program a driver's frequencies, then just hop
to that driver. Or something like that. I don't do Nascar. :)) And
the 246 is cheaper.

>That's too bad about the AR8200. Too bad it doesn't do digital and track

Yes - it's an external box, so the pair isn't exactly
hang-on-your-belt portable. And it still won't track trunked systems.
But it will, IIRC, do SSB, and goes a lot lower in frequency than most
scanners.

You have to decide which is more important for the things you want to
listen to. It's a highly personal thing.

Patrick AFB Area Log - Tues, 25 Oct 2005

CG SECTOR JACKSONVILLE
12:30am: Pan Pan announcement re red flare spotted over Indian River, north of Eau Gallie Cswy; repeated several times.
[156.8, 157.15]

CG VESSEL 25433 (Rigid Hull Inflatable Boat), Port Canaveral.
2:00am: Ops normal; coords to CG Sta Port Canaveral.
[157.15]
Note: For several weeks I have been also hearing CG asset(s) IDd as "CG 433," "CG 65433," and "CG 21433"; I am trying to make heads and tails of all of them.

CG CUTTER 619 (CGC CONFIDENCE), Port Canaveral.
8:10am: Requests entry to Port Canaveral along with CGC 617 (CGC Vigilant); comms with Canaveral Pilot, to West Basin home port.
[156.6]

CG VESSEL 25442, Port Canaveral.
10:31am, 2:14pm: Comms with CG Sta Port Canaveral.
[157.15]

CG 6533: HH-65C (Self-ID).
10:35am: Area transition, comms with CG Sta Port Canaveral at 28-19 North, 80-41 West, course 342, speed 80 knots, to CG Port Canaveral at 500 feet.
[133.75, 157.15]

MUSTANG 01: CE-208B #208B0163, US State Dept, Patrick AFB
10:38am: Departs Patrick AFB.
3:20pm: Lands Patrick.
[133.75, 132.65]

CG CUTTER ELM (WLB-204), Ocean Going Buoy Vessel, Atlantic Beach NC.
10:45am: Comms with CG Sta Port Canaveral while relocating buoys disturbed by Hurricane Wilma; comms with Canaveral Pilots; comms with CG Sta Port Canaveral. WLB-204 is supposedly based at Atlantic Beach NC, but Canaveral Pilot IDd him as based at Ponce Inlet FL, perhaps temporarily.
[156.6, 157.15]

CG CUTTER VIGILANT (WMEC-617), Port Canaveral.
11:01am: Comms with Canaveral Pilot.
[156.6]

SEARCH 01: UH-1N, NASA-KSC Security/Survey Helo.
11:02am: Lands Patrick.
[133.75]

ACFT 712: P-3C
11:20am: Air-air comms with Acft 711; passes coded location coordinates.
[303.0]

CG 65433 (21433?)
11:56am, 12:28pm.

SWEET 03: C-130H #88-4403, Mitchell Field, Milwaukee 440AW AFRC
12:25pm: Arrives Patrick.
1:19pm: Departs to Moody AFB.
[118.4, 133.75, 132.65, 372.2]

ASCOT 5438: Royal Air Force.
12:38pm: En route to Belize.
[133.475, 133.275]

N___CS: P-3 (Self-ID), CBP.
12:43pm: Comms with Sealord: "Going operational."
[267.5]

LIMA LIMA 05: P-3C, NAS Jacksonville VP-30 "Pro's Nest"
12:45pm: Area transition.
[132.65]

JSTARS 03: E-8C.
12:48pm: Lands Melbourne IAP
[132.65, 118.2]

LA 052: P-3C, Jacksonville NAS VP-5 "Mad Foxes."
1:00pm: To NAS Key West, then RTB NAS Jacksonville.
[132.65, 132.25]

REACH 571T: Pre-POTUS-Trip Acft.
2:24pm: Southbound.
[133.475]
NOTE: Dubya will be visiting the South Florida area Thursday to survey the damage from Hurricane Wilma.

FANG 01, FANG 04: F-15, FL-ANG 125FW, Jacksonville IAP.
2:35pm: Checks into Charlie Airspace.
[301.0]

SNAKE 01, SNAKE 02: F-15, FL-ANG 125FW, Jacksonville IAP.
2:46pm: Checks into Charlie Airspace. SNAKE 01 is #75029. SNAKE 02 is #75049.

Ok I know it all depends, but which do you consider the top of the line base and handheld scanners and overall 'best'? Also which are best buys? The BC246T looks like a good deal for the money. What do you like? Will the best of the digital scanners also do as well as the non digital scanners for non digital listening? Or are there pitfalls to avoid? I'm not sure if I want a base or handheld for a starter.

Bill

Precisely at 12:30pm EDT (1630z), SAM 28000 (the backup plane for Air Force One) landed at Patrick AFB. His inbound handoff sequence was 124.8 > 132.65 > 133.75.

I was able to take a fine photo of his arrival today. If anyone wants a copy, drop an Email to me.

Also, when at the magazine stand, check this month's issue of Popular Communications for my article. If you ever have any Mil communications info that you might want me to include in a future article, be sure to send it along to me.

Hi Bill

Please allow my "two cents" worth...

Just yesterday I purchased a Uniden BC796D. This unit will sit on the shelf and be strictly for base station use. For a hand-held I have an Icom IC-R20, which is really an all-mode communications receiver.

After first powering up the BC796D, I was able to immediately enter frequencies into memory channels and start the scanning function. This scanner will require a bit of a learning curve because of all the features it has to offer. The operators manual was downloaded first to become familiarized with it's operation and to discover what features it actually had.

Features which are most important may include:

1. A "VFO" control. This will allow the frequencies to be tuned very easily, as opposed to using the "up & down" controls used on most scanners. On the BC796D, this control will also allow quick memory channel selection. So far, the VFO knob is way to small on the BC796D, as opposed to the VFO control knob on the BC898T. That is about the only negative issue so far, but then I've only been playing with it less than 24 hours!

2. Selectable tuning steps instead of the default tuning step ranges which may be off a few KC's from where you want to listen. Also the option of selecting the mode, AM - FM - WFM - NFM.

3. "NLD" Nice Large Display. This is something the BC796D excels in.

4. Since my vision isn't what it used to be, I've found the newer units, wether it be Radio Shack or Uniden, to name just a couple, now have the complete front panel and push-buttons backlit. I would have to say that this alone is the main reason I chose the BC9796D. In a dimly lighted room the controls are very easy to navigate. Plus, it's

looks way cool!

5. Continuos frequency coverage! This is a very handy option. Even though the Uniden BC796D has a few gaps, the range is sufficient for my needs. The Icom IC-R20 covers everything from 100KHZ - 3Ghz, except 800Mhz cellular. The R20 is a receiver with complete control over tuning steps, modes etc. Plus it has dual VFO's. This will allow the reception of both the input and output frequencies for repeater systems, very handy!

6. Radio Shack as well as some of the other manufactures have a feature called "Signal-Stalker" which could be of interest. The "Pro-2051" has this feature and it's a close-out at $149.95. In my opinion, including that and the display is about the only thing it has going for it. Reduced frequency coverage, non-selectable frequency steps, however it does have good audio.

7. Good sensitivity, rejection to intermod, adjacent signal rejection, the list goes on.

8. Is the reception of digital modes of importance?

So far I'm very impressed with this radio. It is connected to a Icom AH-7000 Discone antenna outside at about sixteen feet above ground. This unit hears very well and should provide many years of reliable use.

Well I hope this information will be of some use in your decision and hopefully not add to any confusion you may have already had.

Best regards

george

I have a 246 that I love!! The Police here do not use digital so I have
never bought or tried one. I started with a Pro-95 and then bought a 246.
The 246 works just as well, and is MUCH smaller which is what I like so
much. Makes it much easier to carry.
The 246 is about $200.00 including the AC adapter and PC cable. Well worth
it.

Hi Scott

The discone type antenna is probably the best antenna available for a scanner. Of course there are some other considerations to be aware of, specifically, what are your "bands of interest"? Would you also like to be able to receive transmissions from satellites, and/or other overhead aircraft? Are you interested in receiving signals from a great distance, or just local traffic? You're in luck, the Discone does all that!

If you have a "vent pipe" on your roof, it would then only require a short section of mast to mount the Discone to, and then mount the mast to the vent pipe. This is exactly how I have mounted my discone, and it works very well.

I have even used a Discone antenna inside with quite acceptable results. The advantage here is that only a very short cable is required.

There are many types of Discone antennas available, and for different parts of the RF spectrum. AOR has one which is good form 75Mhz - 3Ghz, and it is less than three feet tall. Do a search for "DS3000".

Hope this helps.

Best regards

george

Well yes you do have things on your roof to attach an antenna to :-)
You have 2" or 3" or 4" pipes sticking out the top of your roof, i.e.
every home or apartment in the USA has them. If your buying that
RadioShit antenna then you also need to pick up:

http://www.radioshack.com/product/index.jsp?productId=2062040&cp

and

http://www.radioshack.com/product/index.jsp?productId=2062033
&cp=&kw=antenna+mast&parentPage=search

and you will need

http://www.radioshack.com/product/index.jsp?productId=2103483&cp

and last

http://www.radioshack.com/search/index.jsp?kwCatId=&kw=278-120

And that will put you 5 feet in the air.. You can stop into Lowe's and
pickup a 10 foot mast for $14.00 rather then use the 5 footer from
RadioShit..

>2. Selectable tuning steps instead of the default tuning step ranges
>which may be off a few KC's from where you want to listen.

If the frequency is "a few KCs off", someone should notify the
licensee, because they're operating illegally. If it's 5 KHz off,
you're probably trying to receive the wrong frequency. A lot of PS
frequencies found on the internet were found by people who had their
scanners on the wrong frequency, and when you try to match that
frequency with a better scanner, you think that the transmitter is off
frequency. No, it's the knowledge of the person reporting the
frequency that was off. Most technicians know how to keep the
transmitters on frequency - it's what they were hired for.

>5. Continuos frequency coverage! This is a very handy option. Even
>though the Uniden BC796D has a few gaps, the range is sufficient for my
>needs. The Icom IC-R20 covers everything from 100KHZ - 3Ghz, except
>800Mhz cellular.

It covers 1.8 GHz cellular? Or did you just forget to mention that?
(Not that receiving it would do any good - there are NO analog
services in the "PCS" band.)

>7. Good sensitivity, rejection to intermod

Not in any receiver ever made, if the intermod is external to the
scanner. If it's on the frequency you're receiving, you'll receive
it. GRE, Uniden or a Motorola G-strip (which was probably the
tightest receiver ever made - the thing had cavities for front end
filters).

You may mean a receiver that doesn't suffer much from front end
overload. Typical of Uniden, NOT typical of GRE. (You're almost
assured of overloading the front end of a GRE scanner if you put on an
external antenna, unless you don't live anywhere near any
transmitter.)

> adjacent signal rejection

Also not with almost any scanner ever made. Most scanners have a
fixed IF bandwidth. It's difficult to be wide enough to not distort
on an 11 KHz channel and still not pick up adjacent channel
interference with 5 KHz channel spacing.

>expect from this type of setup.

Four things you should be aware of:

1) A discone is a negative gain antenna - that is, it has less gain than a dipole, which is the standard by which 0 gain is measured. Since the signal it receives is so weak, the cable is VERY important - the lower the loss the better, even if it's a fairly short run. DON'T buy your cable from Radio Shack - they don't sell any low loss cable - only cable that's lowER loss than the regular cable. Go to this site <http://www.timesmicrowave.com/cgi-bin/calculate.pl>, plug in the highest frequency you're interested in (will you be listening to 850?), the cable type (try a few of the common ones - RG6, RG8, RG58) and the approximate length of cable, and you'll see how much signal the cable will lose. Look at the "efficiency". Subtract that from 100 and that's how much signal is being lost.

Don't let anyone tell you that it only matters if you're transmitting. Do you see any "direction" choice there? The same amount of signal is lost in both directions. (Actually a little more is lost with a scanner because the scanner isn't a 50 ohm load to the cable.)

Be prepared to spend at least 50 cents/foot for decent cable and up to $2/foot for good cable. Putting up a gainless antenna and lossy cable (like 100 feet of RG58 for 850 MHz - 96% of the signal is lost in the cable) is just a waste of time and money. You'll probably receive better with a rubber duck on the scanner.

2) Don't buy hype, buy an antenna.

If a discone is designed properly, and very well made, it will cover a frequency range of 4:1. (Most real - not on paper - discones are more like 3:1.) The lowest frequency is that at which the radials are 1/4 wave long. So to receive VHF-lo well they have to be about 6 feet long. The highest frequency this antenna will be any good at will be about 120 MHz.

The typical discone with 3 foot radials will cover from about 75-225 MHz.

25-1300 MHz is advertising copy, not measured performance. If anyone can get a discone (without a whip sticking up on top - just a pure discone - if you want whips, buy a Scantenna, or something like it) to cover a 50:1 frequency range (25-1300), you're going to hear him named a Nobel prize winner in physics. And science will have to be rethought.

ANYTHING that's not an insulator will receive signals. The question is whether that thing, at the end of some reasonable length of affordable cable will receive any more signal than an antenna plugged right into the scanner. Why put up an antenna that gives you 6db gain over the antenna on the scanner and connect it with cable that gives you 9db loss? You just REDUCED the signal you're going to hear by 50% (3db). Sure the antenna has 6db gain over the one on the scanner - but it's not going to do you any good unless the cable loss is less than 6db.

3) Wherever you put the antenna, and no matter how high you put it, figure out where it will fall if the mount breaks away at the base. It should fall within the confines of your property - for a few of reasons.

1) You don't want a neighbor getting hurt if it falls.
2) You WILL be considered legally negligent if you mount it so that it can fall outside your property line.
3) Your insurance won't cover the judgment against you - you'll pay it all out of your pocket.

But don't mount an antenna on your chimney. Aside from the fact that a chimney isn't made to withstand the torque produced when the wind hits the antenna, part of what goes up the flue is sulphur and, when it comes into contact with water (like from air with any humidity at all), it forms sulphuric acid. Do you really want your antenna bathed in that for months at a time every year?

Add last, but by no means least, if you're going to put up an outside antenna, PLEASE put in a good grounding system, ground the mast to it and use a static discharge device on the cable. The ground system should tie ALL the grounds in the house to one point - telephone, electric, antenna. And a decent ground (not a good one, a decent one) is AT LEAST 4 10 foot ground rods spaced in a rectangle at least 10 feet on a side, with wire going from 1 to the next, but NOT forming a loop, with all your grounds connected at one point along that run - any one point, preferably near the middle.

I'm not making this up - read the National Electric Code on grounding, or ask an electrician. This is important - people are killed every year by bad antenna installations. Not many - but if you're one of them, it doesn't matter how many there are.

With all that in mind, this is a hobby, so enjoy it.

Hi Al

Having just purchased this unit last Thursday, I'm still getting use to the way a scanner works, and believe it or not, this Uniden BC796D is my very first scanner, and the very first time I've ever responded to something in the newsgroups.

Thanks for the correction on the "few KC's off" line. What I should have said is "five or ten KC"s off frequency". By "off frequency", the scanner itself is unable to tune in finer steps, and only has "default" steps, which get close but not right on the frequency I'm trying to receive.

While looking at just some the various scanners, I noticed that at least one did not tune the UHF Ham repeater sub-band correctly, and I was unable receive some of the repeaters in that portion. It would only tune in 15KC increments. In Northern California the UHF 440 - 450 repeater sub-band has 25KC spacing and in Southern California they use 20KC spacing. This is just one example.

Just went through the entire range on the IC-R20 and apparently the 800Mhz cellular portion is the only area with any gap in it. My IC-R100 receives the entire range from 100Khz - 1854Mhz continuously and without any gaps. However, the IC-R100 is probably the slowest radio around when it comes to scanning. This is the reason for finally getting a scanner, and the BC796D rips right along at this function!

"Good sensitivity, rejection to intermod and adjacent signal rejection".

Well perhaps I now live in an area where this isn't really an issue. When I lived up in Northern California, Mt. Diablo produced a fair share of undesired signals, and then again some were of considerable interest too!

Best regards

george

A lot of notch filters. FM Broadcast. A few to cover the TV
broadcast spectrum.

GRE receivers don't like big antennas - they overload easily.

>Sounds like what I need then. Will the work with a handheld scanner?

The antenna will work with anything. A GRE (Radio Shack) scanner will overload easily so, if there are any transmitters within a few miles of you, you probably don't want too much antenna.

>What about wiring? I need cable and
>adapter plugs to get everything hooked up from the Antenna to my

Again - how long and what frequency?

> I'm also wondering what type of connectors I need to hook the antenna
>up to the pro 95 handheld.

BNC for the scanner end. I'm not sure about that particular antenna, but I think it takes a PL-259 (278-205). Soldered. Even at 150 MHz, you don't want a non-solder connector. At 850 MHz, it's as good as 5 feet of cable missing between the antenna and scanner. Radio Shack doesn't list a solder-type BNC connector, so you might want to use another PL-259 (they come 2 to a pack at RS) and use an adapter (278-120) to go to the scanner.

Regardless of the antenna, the Pro-95 takes a BNC connector. But RS doesn't sell a solder-type male BNC.

why bother ? the FCC has ended the requirement to maintain analog
cellular services by 2007. analog conversations in most large metro
areas are already mostly dead, with the remaining services generally
found in remote areas poorly served by digital services.

don't spend a lot for your analog cellular scanner (pro-43 or similar
for example) as it will soon become nearly worthless.

I understand what you mean, but to be honest I doubt that my county
will ever bother going digital. If so it'll be 15 years after everyone
else does. They stay behind on everything.

By the way I live in Newnan, GA Coweta County.....You have any
information about them going digital. Were part of the Metro Atlanta
area.

I can almost guarantee you that nearly all cell traffic in your area is digital and has been for some time now. Don't even bother.

A pl259 to BNC adaptor should fix you right up..

Be warned, the BNC connector on a 95 (or almost any RS or UNiden scanner is not the best quality and if you have RG8 coax (half inch) and connect it directly to the scanner, it's not going to last very long.

Get a barrel connector and get a short RG58 jumper, and then use the PL259 to BNC adaptor on it...

Don't expect to hear all that much, any 40 buck CB will blow it away, scanners don't do AM all that well and on the lower end freqs tend to do even worse...

Sticking the antenna on top of the fridge or if you have metal countertop will help.

LOL. Al, Only in your universe are Uniden radios more resistant to overload than most GRE built scanners. Uniden is FAMOUS for overloading.

In our universe, that is..

They have gotten better though, the BC8500 was hands down the worst scanner I ever had. It was a total disaster, and was sent back right away. They seemed to partially learn their lesson after that train wreck, but their low end radios are pretty bad. Worse than most of the GRE radios I've had here over the years..

And I've owned, and repaired a large number of scanners from both manufacturers and most of the ones I buy, or keep, tend to be GRE, for RF performance, if not for quality control issues, like non soldered speaker leads, antennas, loose screws, loose BNC connectors, etc...

That's in my universe..

Name 1 "scanner" antenna that does have gain? Not an
amatuer antenna a "scanner" antenna. NONE, have any gain.
If you want to use a amateur antenna as in a dual band, fine.
But its going to operate in negative gain territory outside of its
design limits also. Not many people want to listen to just 2 areas
of the spectrum, i.e. 146Mhz and or 440Mhz. With trunking a
fact of life nowdays most people want to listen anywhere from
100 to 900Mhz. There are only 2 antennas that work well all
the way thru that area, one is the discone and the other is the
Austin Ferret. With the Ferret running at 225$ most people dont
want to spend that much.

Actually a nice link, very informative and agree with it
totally. I use Quad Shielded RG 6 with only about a 25' run. Im good
up to about 1 Gig. Not much above that to listen to anyway.

> Be prepared to spend at least 50 cents/foot for decent cable and up to

> about 120 MHz.

Actually a good discone is closer to a 10: 1 ratio. Most, without
the vertical stinger are good from 100-1000Mhz. I have transmitted
on mine on 52, 144, 440, and 904Mhz with anywhere from excellent
to good results. (mine does have the stinger) Actually mine works
very well in the 900Mhz area in general, better than any other scanner
antennas I have used, and I have had them all up at one time or another.
Scantenna, Scan King 1500, various Antenna Specialist scanner antennas
and most of them were almost deaf in that range.
>
> The typical discone with 3 foot radials will cover from about 75-225

The math for a discone is totally different than the math for
a dipole. They just dont work the same way.

> or ask an electrician. This is important - people are killed every
> year by bad antenna installations. Not many - but if you're one of
> them, it doesn't matter how many there are.

The people that do get killed are the idiots that put up a mast
and an antenna 10' from a power line, and when it goes down and lands
on a power line bad things happen. Rule No. 1, do not put ANY

antenna even remotely close to ANY power line and you wont have
any problems.

4314. Re: Digital Scanner?

I live in Macomb County, Michigan. Digital is in wide use for Public Safety, but not much else that I'm aware of. There are other considerations however. The FCC is rolling out what's called a re-banding project, that will impact most of the 800MHz trunked systems. It appears that the scanners that will remain fully compatible after this, for the most part be the digital scanners, because of their current design, and technology. However, the Uniden BR330T that you mentioned, looks like it will remain in the game as well. So if you're pretty certain you won't need digital for some time, then the BR330T looks like a good buy! There are some dealers offering pretty good prices on the BR330T, on eBay.

Hi Scott

There are many types of Discone antennas available depending on what frequency range your interested in receiving. Cable is a very important consideration and often overlooked. When I purchased the Icom AH-7000 Discone antenna, about twelve years ago, a fifty foot section of their so called "low loss" cable was included, and terminated with "N" connectors at both ends. Personally I wouldn't even give that included cable away to someone I didn't know, as it is pretty poor quality.

When this particular Discone was installed, the cable I selected was Belden 9913. This cable has a 9 1/2 AWG solid center conductor, a solid spiral teflon tube continuously running around the center conductor which is enclosed in a air dielectric teflon tube bonded with copper foil on the outside and that is covered with a braided copper shield and covered with a soft PVC water-proof jacket. There is an "N" connector with the center pin specifically made for this exact cable.

Since this cable is not as flexible as some installations may require, "Cable Experts" has a "9913" equivalent cable which is a little more flexible, it's "CXP1318" and is available in various lengths terminated with either an "N" or "PL-259" connector.

Believe it or not, the difference in this cable compared to the cable included with the Discone was significant. This test was made with the Icom AH-7000 Discone using equal lengths of both cables, fifty feet, and both cables were terminated with type "N" connectors. Using my Icom IC-970H multi-mode transceiver, I observed about SEVEN S units in signal strength at 432Mhz. That's right, SEVEN! I now have a twenty two foot section of "Andrews Heliax" hardline cable connected to a "KB6KQ 432Mhz loop antenna". Realizing I'm getting off topic here, the point I'm attempting to make is the CABLE is a VERY important issue!

May I suggest that before you finalize your anticipated antenna installation, do some testing with antenna placement, you may find that it may not be necessary to have it mounted outside in the weather. I'm located right on the beach and routinely need to remove, clean and replace my Discone every few months due to corrosion. This next week I'll be purchasing the AOR DS3000A Discone antenna. This will be mounted inside with only a six foot section of CXP1318 cable and dedicated to the Uniden BC796D I purchased just last week. Believe it or not, it is my very first "scanner".

You may even have an area in the attic which will accommodate your installation. I say this because when you start installing antennas

outside, sometimes your neighbors suddenly become interested in what
your doing. Something else you may want to consider. My nearest
neighbor is probably less than a mile away, so I do not worry about
this and have various antennas mounted outside only because their also
used for transmitting as well.

If you do not plan on using your Discone for transmitting you may get
away with it mounted inside. Above all, use good cable and if possible,
keep cable lengths to a minimum!

Best regards

george

" exactly "

actually , there absolutely will be new services / transmissions that will fill those old analog freqs and 700- 800 mhz in general. new scanners (those built after 2007) would logically be able to receive the whole 700 - 800 mhz band , with no exceptions , because the banned analog cellular calls will be gone.

trouble is (with old / current scanners , that is) , not only would they be " frequency challenged " as you say , they will also be " scanning " challenged because the new reorganization of the 700 - 800 (and others) bands will have different channel spacing and modes of transmission. the only currently made scanners that will survive those changes (properly) will be the ones with manually programmable channel spacing (on all bands) and additionally they must have manually programmable mode selection too. a great many scanners, as a matter of fact , most current scanners have some sort of preprogrammed spacing / mode selection built into their eproms for use in automatic selection operation.

serious scanner hobbyist will almost certainly want a scanner that addresses the new changes in process , esp band / mode changes . one especially, that doesn't prevent them from listening (properly) to the new activities that are in the works.

if you are worried about having a scanner that will pick up the banned cellular freqs , forget about clinging to your old scanners and look to the new ones when they come out (2007 and beyond) as they will surely be able to, since the banned restrictions will no longer apply. most people will want scanners with eproms that fit the new band spacing / freq / mode changes , basically flooding the market with current / older scanners that do not fit properly into the current changes taking place.
zillions of current high end scanners will be had for a song when the new jobbies hit the market. you can bet that scanner makers have already geared up their production to address these issues and will try to beat each other to production. all the people that have bought those current expensive digital scanners or any scanner with preprogrammed eproms (nearly any and all models) will be stuck with old technology and be angry that their new $500 scanner only lasted 2 or 3 years before becoming obsolete.

mega changes in the cages are at hand for everyone in this hobby.

The Boston 800 system is mostly for city services. The PD and FD have some
talk groups on them but I have never heard them used.
PD and FD channels are on UHF.

http://www.scanboston.com/Freqs.htm

The State Police have jurisdiction in Boston also, they are responsible for
I 93(the big dig), Piers and the airport. They are also on an 800 system.The
airport 800 system is low power, you may not hear it in all parts of the
city.

http://users.adelphia.net/~kc1ho/ematrunk/

Enjoy your visit.

Just use a 1/4 wave VHF whip (unity gain on VHF, 1/2 wave gain on
UHF) and some decent quality RG6X quad shield satellite cable. Put
the whole thing on a short mast on your roof, use an "F to PL259"
adapter on the antenna end, and an "F to BNC" adapter on the scanner
end inside.

Should give you PLENTY of improved performance over a duck.

Discones are very low gain and wide band. They also bring in a LOT of
unwanted interference with intermod/etc.

You'll do fine with a VHF 1/4 wave as a base station antenna for
scanner use.

The impedence mis-match of the cable won't make a whole lot of
difference to the scanner.

Go with the Bearcat 396T for a portable.

Go with the BC796D for a Base/Mobile.

These are the top of the line Uniden scanners. They have trunking and digital capabilities if you need them. They can scan conventional channels. Don't settle for a cheaper scanner that doesn't trunk trac or follow digital systems. Good luck.

Good point - But do you really think that they would come out with some
sort of bizzare channel spacing like 13.8 khz, that would render it
impossible for scanners, which generally will all recieve in 5/25 khz
steps, to recieve ?
Even with the above example, most scanners would likely catch the
transmission just fine, if slighlty out of tune.
There are not too many numbers which you can get very far from 5khz steps.
Don't know if the way I put that makes complete sense, but I trust you
gather what the gist of my point is.

I will beleive the restriction is lifted when I see it happen.
Once passed, laws/regulations are no so easily rescinded ... Even if
rescinding makes perfect sense.

True, but the same can be said gor any technology just about.
I spent $3,000 in 1997 to get a top of the line computer - A Pentium 2 266
mhz beast running W 95.
Today, I'd be lucky to get $100 for it, from someone wanting an extra
computer for their grandchild or something.
I paid about the same less than a year ago for a P4 3.60 GHZ as I did for
the first - And no doubt 5 years from now it will be a quaint little joke,
suitable to play old games and run word programs on.
Such is life, and scanners are no exception.

Was calculated as $16.20 to my location which [MI], if insured, sounds in the
ballpark.
And if that $25 rebate is legit, sounds pretty good.
Don't need this though, as I have a Canadian bought Alinco DJ-X2000.

Better to have the features if you need them at a later time than to waste
money on a scanner that may be a paper weight once 800 MHZ rebanding happens
or your local agency goes digital.

Thanks Bill, the more I have looked at the BR330T the more I like it. I
think it's only been out about a month maybe? Here's a quote from CEI:

" Looking for a scanner that's better, sorry, this is a unique product and
we have no additional recommendations. "

>steps, which get close but not right on the frequency I'm trying to
>receive.

That's an older scanner that wasn't designed for current bandplans.
It's like an old scanner that can't tune to an 850 MHz frequency.
You're comparing apples to ducks, since there aren't any older tunable
scanners, unless you include ham gear.

>While looking at just some the various scanners, I noticed that at
>least one did not tune the UHF Ham repeater sub-band correctly, and I
>was unable receive some of the repeaters in that portion. It would
>only tune in 15KC increments.

At one time UHF equipment operated on 30 KHz channellization, so 15
KHz steps were just fine. (Actually, at one time, a mile was an
unreachable goal at 400 MHz. And frequency stability was so poor that
"frequency" was a courtesy, not a measurement. Look up "Vocaline" for
kicks, or look at
<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5813581566&category=296>.
Using that today would probably get you free room and board, but I
used a pair of them in the early 60s. Frequency? Around 465 MHz.
Counters were no good up there, so the best we could do was Lecher
lines, so we got the frequency accurate to about 1/4" of wavelength -
as long as it didn't drift to rapidly.)

>In Northern California the UHF 440 - 450
>repeater sub-band has 25KC spacing and in Southern California they use
>20KC spacing. This is just one example.

And modern scanners allow 5 KHz steps.

>amatuer antenna a "scanner" antenna.

Since we never covered "scanner antenna" in antenna theory, define
what you mean.

Dipoles (or ground planes) have, by definition, 0dbd gain. A discone
has negative gain, vis-a-vis a dipole.

>With trunking a
>fact of life nowdays most people want to listen anywhere from
>100 to 900Mhz. There are only 2 antennas that work well all
>the way thru that area, one is the discone

The discone operates, at best, over a 4:1 frequency range, not exactly
VHF-hi to 850.

> Actually a nice link, very informative and agree with it
>totally. I use Quad Shielded RG 6 with only about a 25' run. Im good
>up to about 1 Gig. Not much above that to listen to anyway.

I'll go along with 2.3db loss being ok, but what is quad shielding
buying you with an unshielded scanner?

> Actually a good discone is closer to a 10: 1 ratio.

When are they awarding you your Nobel prize?

Most antenna engineers will quote you 3:1 for real world antennas.
Some claim that they can actually achieve 4:1, but I suspect the
machining costs would make the antenna unaffordable.

> Most, without
>the vertical stinger are good from 100-1000Mhz. I have transmitted
>on mine on 52, 144, 440, and 904Mhz with anywhere from excellent
>to good results.

I can do the same thing with my R7, but that doesn't make the antenna
an antenna at those frequencies. Conductors don't accumulate signal,
they radiate it.

> The math for a discone is totally different than the math for
>a dipole. They just dont work the same way.

Yep - the rule of thumb is that the lowest frequency is that at which the radials are 1/4 wave and the highest frequency is 3 times that for a good design that's been well implemented.

> You're getting carried away here again with the grounding thing.
>Nobody, and I mean nobody puts a grd system in as you describe here.

No one you know - okay. Many people I know have and do.

>It simply isnt needed.

Not unless you want a good ground. I'm not talking about not having the mic bite you, I'm talking about not living in a hole in the ground after the pole pig on the pole in front of your house suffers a direct strike.

>> I'm not making this up - read the National Electric Code on grounding,
>> or ask an electrician. This is important - people are killed every
>> year by bad antenna installations. Not many - but if you're one of
>> them, it doesn't matter how many there are.

> The people that do get killed are the idiots that put up a mast
>and an antenna 10' from a power line, and when it goes down and lands
>on a power line bad things happen.

I'm talking about those killed by lightning. You don't run a ground system to blow breakers on a 440 line that are located a few miles, and a few transformations, from the ground.

>Rule No. 1, do not put ANY
>antenna even remotely close to ANY power line and you wont have
>any problems.

Until the clouds gather.

I hope you sleep well when someone actually takes your advice and it results in his death.

*N*E*V*E*R* take *A*N*Y* chances with lightning. 50 million volts can't be "handled" by anything man can do when it has tens of thousands of amps available behind it.

>Just use a 1/4 wave VHF whip (unity gain on VHF, 1/2 wave gain on
>UHF)

Minor point - 1/4 wavelength at 150 MHz is 3/4 wavelength at 450 MHz.

>Discones are very low gain and wide band. They also bring in a LOT of
>unwanted interference with intermod/etc.

Being broadband, they bring in signals that may cause intermod, but
that can't "bring in intermod".

>You'll do fine with a VHF 1/4 wave as a base station antenna for
>scanner use.

Better than with a discone, but not for more than 2 bands - 150 and
450 - or 1 band of his choice.

>The impedence mis-match of the cable won't make a whole lot of
>difference to the scanner.

It won't make any difference to the scanner - the load doesn't care
about impedance mismatch.

The thing is, we are relying on the fact that the transmission remains
unencrypted. But with digital systems, turning the encryption on is as
easy as to click a checkbox in a menu.

In fact, I am curious as to why many of them have not done so yet.
Perhaps because digital comms are still new. But as soon as too many
people have digital scanners, then the users will simply turn the
encryption on. and we are all stuffed. Then digital scanners will
become worthless...

I'd expect that we'll more often see the "general" channels (e.g., dispatch) remaining unencrypted, with tactical or admin channels encrypted. Just a guess.

Have you tried RadioReference? See if this link gets you there, from
there you have to know the counties interested in;
"http://www.radioreference.com/modules.php?name=RR&stid=27"
You may have to join, but it is free (donations excepted). If you tell
me the exact area....County, City, perhaps even the College you are
interested in, I can be of better help with frequencies, and the type
of scanner.

I think you are right , that many (if not most) scanners will still
work " ok " with the new 800 mhz channel spacing because it
packs more channels into smaller bands of freqs . like you said, these
will likely still work it's just that scanners in general won't be
preprogrammed for the correct spacing in 800 mhz and most average
scanners don't receive the new 700 mhz bands at all. myself , I'm
picky and like to have all my presets (in eprom) fit the bands I'm
listening to. either way , it will still be 3 or 4 years or more
before all this gets completely on a roll. by that time , totally
new modes such as UWB will be getting started , changing things up
all over again ! aha h ahah ha aha with analog TV channels mandated
to end (now) in 2008 , who can foresee what all that change will
mean for scanner hobbyists with all those freqs open too. quite a
lot of change as compared to past times. maybe the time is close at
hand for completely software programmable DSP based scanners, so
that we can keep up with all these changes !

>

Funny, in OVER THE AIR tests here right where I'm typing, the Unidens
have problems with the nearby 155MHZ Police and Ch 24 TV, and sometimes
30 too, doing all kinds of stuff they shouldn't have been doing. The 93
and 95 don't have any real problems, at least on freqs where I need to
listen to, and the 96 has just a tad of ch 24 interference. This is the
usual pattern, going back to the period where the Pro-2004 came out.
Before that, they were both really bad. The first decent base scanner
that Uniden made was the BC9000XLT, and mine has issues with the 155mhz
PD tower directly across the river causing background hash everywhere
when they key up (nearly continuously) and they can be heard clearly on
many VHF, UHF, and 800 freqs, either in the background, or clear as if
they were on the correct freq. I have repaired several 9000s, mostly BNC
connectors and display lights, and they all do it, some worse than mine,
some a little better..

The GRE radios like the Pro 43,92 (one of the few duds they've made
recently) 93/95 are always better than the Unidens in about every way,
RF wise, but sensitivity, and audio output. Not perfect by any means,
but an easy choice.

Time after time, model after model, the GRE radios (not the really old
and real cheap ones) are better performers than the Unidens. It's not
even close most of the time. The 396 I had here a few days ago wasn't
horrible at all, but it stopped scanning on a lot of channels it
shouldn't have, and it annoyed the hell out of me. Not as bad as my 3000

was, but annoying enough to probably make me get a 96, it worked well here.

I have bought many Uniden handhelds over the years, and they just don't stay... My Pro 43 is a senior citizen now. Not used much, but works fine when I take out at work when there's something big going on. Another huge strike against the Uniden handhelds, until recently, was the damn battery pack nonsense. At least they fixed that..

Incorrect, gain is normally quoted over an Isotropic radiator, which a
Dipole is NOT. However relative to an isotropic radiatior, and
Discone is a zero gain antenna. The attraction of the Discone is from
the low VSWR over vast frequency range. A very high VSWR can turn a
high gain antenna into a losing proposition because of feedline
losses.

Normally advertising hype is quoted in dbi, while honest antenna gain
is quoted in dbd. So is engineering gain.

Al,

I am not a liar and I take exception to your sarcasm.

Read the item description for the amendment. A bid has been placed on the item and that locks in a lot of the auction info., including the shipping formula. I could not change the shipping formula so I added to the narrative...just as I said I did.

Dear All,

First of all, I would like to thank you very much for sending me so many e-mails from all over the world to tell me how much you like IP1kC.

Sorry if I wasn't able to reply to all, but the two most common questions were 1) Do I need a Null Modem Adapter to connect my Palm with my PCR1000 / PCR100 ? and 2) Would you please send me the source code of IP1kC ?

Well, I'm pleased to answer YES to both questions.

YES, you do need a Null Modem Adapter and YES, I have decided to release the full source code.
Maybe somebody with more time than me will pick up from here, improve IP1kC and share it with the community :-)

http://www.geocities.com/jjintokyo/

Oh and check out my new IP1k2 page. It is a simple Windows version, but it does what I need and does it well. Also provided with the full VB6 source code.

http://www.geocities.com/jjintokyo/vb6.html

Please keep sending those e-mails. It is your words of support and encouragement that keep me going.

LONG LIVE THE PCR1000 + PCR100...

JJ in Tokyo.

I've never seen any reference to a "type acceptance" applying to MURS. I could be wrong however. So like you, I invite someone to refer us to such guidelines, and information. It would be appreciated. I would think if you had, say an older Motorola programmed, so you could only use the approved MURS frequencies, at the approve output level, no one would put you in jail.

The older Motorola's required that an encryption module be installed, and programmed, before one could use encryption. It's my understanding this was a very expensive option...not that it needed to be, but Motorola isn't about to give anything away. In Michigan, I have heard on the MPSCS, only MSP, Michigan State Police, use encryption on a few occasions. The only exception to that was technicians, while doing testing on new installations. I too feared this would soon become the norm, but someone in-the-know, claimed it was extremely unlikely. One, for the reason I stated before...VERY expensive! It may be on the newer radios, just a "check box" as you say, when programming them, but I doubt the end user has access to this, and would require cooperation, and charges from the radio manufacture. The other problem would be public outrage, asking what they were trying to hide, etc. While I realize there is a time, and place for encryption, and it will be used on occasion, I doubt we'll see it implemented on a full time basis.

My PC 10s have been working fine for 2 years now. I need to put PL boards in them sometime so I'don't hear the KFC drive thru! They are only 1 watt but cover the apartment complex just fine. The apartment complex staff is even on 154.600 and they don't hear me at all with their PL in place.

Waiting for a list to come up on here. I'm surprised the PRSG staff has not weighed in on this and submitted a PDF of guidelines.

Well I surely hope that you are right!

I generally agree with your reasoning except here: "The other problem
would be public outrage, asking what they were trying to hide, etc." -
I can't see this happen. The reason is that "they" can always say that

the general public has no right to listen to police transmissions in the first place. They can also raise the issue of terrorism, necessitating an increased need for protection of government communications. The question of "what they are trying to hide" then becomes irrelevant.

And about the cost of turning the encryption on, as you imply, the cost is rather artificial. When Motorola, etc., see that this option is not selling, the will make sure it does - by lowering the price and/or by lobbying the government to install or turn the encryption on for operational safety reasons.

I am finding such scenario quite likely. The only thing, which IMHO can stop it or delay it is simply inertia and incompetence. I mean if I was a Motorola salesman, I would not sleep at night until they finally bought my encryption. If I was a police chief, I would want one, too. So, for these most important parties, the interests are aligned. Our interest does not matter to them, in fact it's an added incentive for them to proceed.

Bill,
unfortunately, that is now the normal mode here in Phoenix. :(
Encryption over APCO25 is in full use by Phoenix Police on all radio
equipment that is APCO25 capable. There has already been some noise from
local Groups seeking access to those transmissions (including, but not
limited to: news agencies).

So far, the Police Dept. has been "mum" on this subject (no public comment
or publically stated policy at all) and unofficially, have stated that
encryption is for the express purpose of keeping the newshounds and
ambulance chasers away.

Still, that does not ease the feeling I have that this was meant to do
something more insidious.

This .sig file will continue until Mister Fort posts a sincere apology
to all cancer victims and their families. His refusal to do so says more
about his attitude and upbringing than any of his thoughtless and
hurtful postings in rec.radio.shortwave. He seems to be very proud of
the fact that he can buy expensive radios using the refunded deposit
money from his empty beer containers and has frequently posted the fact.

It appears he is well on his way to purchasing his next radio. Anyone
caring about his well-being should mention the good work of Alcoholics
Anonymous to him. They may be able to help him restore his self respect
and dignity so he stops posting this drunken garbage on the internet.

On the Motorola XTS5000, using encryption cuts battery life by 2/3.
You need three batteries to get through a shift. That's a major pain
in the butt. Encryption generally is used only when mandated by a
particular activity like drugs or raids.

>> How near is "near"?

>I guess I am more worried of either frying the radio or remote start.

I doubt that you'll fry the radio - the remote start is a receiver. As
far as frying the remote start - it's possible. It's also possible to
fry the car's computer - manufacturers don't guarantee that the
computers can withstand radio transmitters of any kind in cars these
days.

But you can mount the 2 meter antenna so that it's not close enough to
the remote start antenna to do any damage. I run 50 watts on 2 and
440 in the car and the alarm still works.

There are many programs designed for the visually challenged which can write spoken words in any text app, and will in fact play back words of highlighted text - So it is possible.
I have some of these apps myself, not because I can't see but because I think they are cool.
Having said that, yeah I think the 'latex' comment gives this joker away as a troll, though a rather subtle one.

This .sig file will continue until Mister Fort posts a sincere apology
to all cancer victims and their families. His refusal to do so says more
about his attitude and upbringing than any of his thoughtless and
hurtful postings in rec.radio.shortwave. He seems to be very proud of
the fact that he can buy expensive radios using the refunded deposit
money from his empty beer containers and has frequently posted the fact.

It appears he is well on his way to purchasing his next radio. Anyone
caring about his well-being should mention the good work of Alcoholics
Anonymous to him. They may be able to help him restore his self respect
and dignity so he stops posting this drunken garbage on the internet.

Help Finding Radio Programming Software

Hello,

I'm currently looking for software used to program radios through a computer... this software, I'm told is called MSV and is made by General Electric...

Can anyone validate this and tell me where I can get it... or is there a better alternative to it?

Thanks

XeroVariX

It would probably help your cause if you told us which radio you wanted to program, as different scanners require different software (due to the manufacturers using sometimes completely different protocols, etc, even between different models).

Or isn't it a scanner that you want to program?

You must be much more specific in your request than 'help finding radio programming software'..

a lot fo metal in the structure of most Walmarts (and a lot of other
stores) saoks up the signals

In the real world, FRS does about two miles. The distance claims on FRS radios is highly exaggerated! Yes, there are circumstances they could do ten miles, maybe over water, or if you both were standing on high hills in the desert. Added to that, scanners are not optimized for those frequencies, so it may be that an inexpensive FRS radio, will do better receiving another FRS radio, than the typical scanner can.

Ten miles is hype. Even 5 miles would be hype. Maybe a little more
than 1 mile, but probably not much more.

> Is there a way that Wal-Mart could possibly have
>them blocked from being heard?

No. Bring a scanner into the store and you'll see what frequency
they're on. Then you can see how fast the signal falls into the noise
as you drive down the road.

Also notice that FRS uses a smaller deviation than
other services. Their audio will be lower

.

When FRS radios boast 5 and 10 mile range, I vision the manufacturer's test taking place on a perfectly flat open desert. One radio transmits and the other barely breaks squelch for a microsecond. "That proves it... put 10 mile range all over the packaging!" tout the execs.

No 400 MHz radio with a stub antenna and a tenth of a watt of power or less is going to transmit well over 5 or 10 miles consistently... let alone a mile or two.

Newsgroup: rec.radio.scanner
Date: 2005-11-06 01:23:20 UTC
From: Perry <biffmalibu@rocketmail.com>
Message-ID: <Xns9705B0DF7DE8Chificom@216.196.97.131>
Source record: 11373

Hey all - just bought a Pro-97 and have a little problem.

I entered the 20 or so freqs. for the trunking system in my area (Motorola II). I also entered a bunch (like 20 or 30) of talkgroup IDs. The scanner is in open mode and nothing is locked out.

What happens is this - when it scans, it won't display the talkgroup IDs unless I change the mode from FM to MO (for Motorola) for each channel. If I do that, it ceases to stop on an active frequency when scanning. If I set each channel back to FM mode, it scans fine as before (but doesn't display the talkgroup ID). What am I doing wrong? According to the manual, you're supposed to enter the trunk mode for each channel but it doesn't seem to work properly if I do that.

Thanks.
Perry

too many computer signals coming in to them, well with all gibberish
coming across the wireless networks that they have, showing them how
many $$$$$$$$$$$$$$$'s are ringing through there ears. there's too much rf.

my scanner doesn't work well in the local one here either. can't hear
nothing from the outside.

the other thing i always wondered was how they can sell 8 different
kinds of frs/gmrs radios that all advertised different distances. all
operate at the same frequencies and output yet they all have different
prices.

Actually, you're getting FRS, and GMRS mixed up. FRS is limited to 1/2 watt, and they do not require a license. They usually do not make claims of over two miles, and under very rare circumstances, some have actually reached two miles. GMRS, or FRS/GMRS combination radios will have higher wattage on the GMRS channels. Sometimes as high as five watts (ten times the power of an FRS radio). These are the radios making claims of five, seven, ten, and even 12 miles, but again, it doesn't happen in the real world. Using a GMRS radio requires a license from the FCC. It cost about $80.00, and is good for five years.

Some frequencies are shared by FRS, and GMRS, but not all. Check here:

http://www.ba-marc.org/writeups/gmrs-frs-freq.htm

Those radios have a .75 mile range on the average. That 10 mile range crap
is just that, crap. I have NEVER heard any FRS radio go more than a couple
miles.

'never get nothing' ???? Better learn how to write in English!

Anyhow, maybe they're using GMRS channels???

Or one or some of the other frequencies available to commercial customers.

The situation in France is absolutely crazy... there is absolutely no need
for it. They do it because they think (and often do) that they can get away
with it. Poor Black /Muslim people facing poverty and live in squalor and so
on... never mind the fact they created their own squalor in the first place.
Why the hell dont they just get on with life as most other cultures try to.
Why is it any excuse to get out there and riot... even little kids were out
there setting fire to cars.. where the hell are these kids parents....
(probably tourching the cars in the next street)
But... anyone drawing attention to the fact that the majority of the poor
black/muslim race in ANY country are hellbent on riots at the drop of the
hat and acting like animals will be instantly branded as rascist whether
their points are FACT or not.... liberal limp wristed liberals will be the
cause of many many more riots in the future as they accuse all the
black/muslim peoples problems on rascism rather than the point that many are
lazy scumbags who expect the world to owe them a living... and do nothing
for themselves to lift thereselves and their familys out of the gutter....
which is where they put themselves as a group in the first place.... as
someone in here once said, TBB.... its proven time after time....

You can go straight to the FCC and get the same thing you used to get from PerCon and much more. PerCon stopped doing their CDs after the FCC put this site up. There's no need for them if you're just a scanner hobbyist looking for frequencies.

If you're knowledgeable about databases, you can even download the entire raw database into your own database and build your own queries to do anything you want. They even send out daily updates so you can keep your database synchronized with the FCC.

It's funny to think that back in the 1980s I made the trip to Chicago to look at the microfiche.

Check out:

http://wireless.fcc.gov/database_info.html

It's all there...

Hey Dufus, just how much RF Ground do you think is required at 450 Mhz,
considering that 1/4 Lambda is about 4 inches??????

The one thing you fellows have overlooked is that most of these things
at WallyWorld are being used INSIDE a Concrete Rebared Structure with
few holes except the front doors.......

Me

Source record: 11396

The mysterious interference on 390 MHz that began two weeks ago in the
Ottawa area has disappeared, so garage door openers are working again.
This story at the CBC site implies the signal was a military land
mobile radio system operating from the U.S. embassy:

http://www.cbc.ca/story/canada/national/2005/11/07/garage-signal051107.html

Yes, the Autumn 2005 issue of 2600 on page 13 has some fun with the
PRO-83 that you are looking for. I think there's also a discriminator
tap modification that was posted on the Internet by Gary Hahn, KB9UKD[1].

"A discriminator is a circuit that voice-band filters the base-band audio
coming out of the FM detector, so that the audio coming out of the speaker
and headphone jack sounds good."

Hope this helps?! This will void your warranty on the scanner.

K1MAN BULLETIN - B051109A -

K1MAN RESPONDS TO THE MOST TRUSTED MAN IN AMERICA, WALTER CRONKITE

9 November 2005

Walter Cronkite, KB2GSD
51 W. 52 St. Suite 1934
New York, N.Y. 10019

Walter,

I enjoyed the Neil Armstrong piece on "60 Minutes" yesterday. You were sure at the top of your game back then, for sure!

Dan Rather lectured at the University of Maine last week and suggested that journalists should get a "spine transplant." I immediately thought of you, caving in to anonymous hams and or unconfirmed false reports threatening to implicate you as well me with child molesting. Check your sources, Walter.

Perhaps you simply handled the matter wrongly. You did an ID for me when you were trying to promote your new autobiography. OK so far. You attached no limitations to my use of the ID. I used the ID on my world wide short wave program. Many of my detractors wrote to you and, of course, said I was illegal, etc., and that I was a convicted child molester, etc., which you would be associated with. Your secretary called me about the child molesting issue. You then wrote and asked me to stop using the ID. I agreed if you would come on my program and explain your reasons. You declined. I continued using the ID so as not to cave in to the blackmail as you were so willing to do. Then you call ME unethical?! Who is being unethical here?

You hypocrite! You lobby the FCC to revoke my license after John F. Kennedy threatened you and CBS with trying to influence the FCC when you insisted on running his flubbed remarks during a presidential campaign interview with you. You didn't cave in then!

Here is what you should have done with K1MAN. Ignore the idiots or else publish a disclaimer. Yes, you did the ID but no, you do not endorse AARA, or whatever; not publish a letter on the internet that Glenn Baxter is "unethical." Pretty strong word, Walter!

Believe me, if I were illegal doing what W1AW has done for almost 100 years, the FCC and U.S. Government are smart enough and powerful

enough to do something about it other than defame me with their silly and anemic notices of APPARENT liability. Let's go to court, Walter, and I will call you as my first witness! God bless America, the land of the free and home of the brave.

The FCC is a corrupt agency. Big deal. This is America, and we do have some corruption. We also have laws. I am protected by our wonderful laws.

I am devoting a very critical chapter about you in my new philosophical autobiography which is being published on the internet as I write it. See www.K1MAN.com. Your scurrilous letter about me will be all over the internet for many years. You and your employee, Brian Crow, sure do take some real cheap shots! I feel truly sorry for both of you, but I forgive you both.

God bless you and your family. You looked just great on TV last night.

73,

(signed)
Glenn Baxter, K1MAN

P.S. My book covers your many good traits as well as your very bad ones. Let the readers and history be the judge.

Paul wrote to the Philippians, New Living Translation:

1-28. "Don't be intimidated by your enemies. This will be a sign to them that they are going to be destroyed, but that you are going to be saved, even by God himself."

And, in the King James Version:

4-8. "Finally brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

cc: Brian Crow, K3VR

Mr Baxter is a very honorable man, a gentleman and a scholar, who is waging a battle with the FCC culture of corruption, a battle that all ham radio should thank him for waging. Mr Baxter is a modern day Ham Radio Hero!

ARRL & FCC - partners in the culture of corruption.

The database is available at the FCC website (http://www.fcc.gov) for
free download.

That *you* can't load it into some database program and have a
ready-made searchable system is your failing, not mine. I'm perfectly
capable of loading raw data into a few dozen tables and constructing
some SQL queries to find what I want.

>At least 3 people asked you to post this free download

Most of these guys are arguing with one another about the law.
Remember that: the law? Nawww, being a CBer you probably don't give a
rats ass about the FCC or any other law enforcement body. Does it
tick you off that we're reminding you that rules exist, because we're
so passionate about them?

I hope so.

K1MAN is a great man because he's passionate about the real law and he
defends the little guy against the FCC toadies with his own lawyers.
The FCC bureaucrats are scared to death of K1MAN.

Now go play in the traffic, "Dr Death."

Beat It! (Lloyd Davies'Theme)
M. Jackson/?

Lloydie Davies can never get a date at night
"I'll just order up some food, I'm sure I'll be alright."
He goes under the stained sheets and he turns off all the lights
So beat it, Lloydie, just beat it.

He's got his shemale tapes, he's got a few gay porn DVDs
He's got the Daleks, he never needs real pussy!
The time is right, I'd better use the pics on the PC
So beat it, choke your dick like it owes you money!

Lloydie will Just beat it, beat it
'Till the urge has been defeated
Show them how lonely and sad is your life
Hearin' it's wrong, but feelin' so right

Just beat it (beat it.)
Just beat it (beat it)

His mom came by, she needed to get her makeup bag
She went to check on him, if just to be a nag
She opened up his door and she started to gag
Lloydie, don't beat it! Don't beat it!

A girl invited him to come see her favorite band
"I think that would be fun, why won't you be my man?"
He told her and he told her, "You just don't understand,"
"I just beat it, I make love to my hand!"

So Lloydie, beat it, just beat it
Soon your inferior genes will be depleted!
Show them how lonely and sad is your life
Regular sex to you it's wrong but jacking off is so right
Just beat it, beat it
'Till the urge has been defeated
Show them how lonely and sad is your life
Regular sex to you it's wrong but jacking off is so right.
Just beat it (beat it)
Just beat it (beat it)

(Continue to fadeout)

k1man needs to see a headshrinker, and I mean FAST !

I mean it folks.

One minute he's biting your ankles like
an enraged Chihuahua dog, the next minute
he's on his back wanting you to rub his tummy
and then wants to lick you like a puppy.

This guy is definitely got a BIPOLAR DISORDER.

For Glen's own good, I really hope he's on Prozac, Paxil, Luvox,
Valium or some other orally administered psychotropic drug.

If not I am afraid he'll show up on the 6:00 news some night as
the latest ham op who went apeshit someplace......(you know
hams...their usually crazy SOB's to begin with !!)

This is SCARY SHIT folks !!

Quoting from the above link:

"Among a fringe community of paranoids, aluminum helmets (tinfoil hats)
serve
as the protective measure of choice against invasive radio signals. We
investigate
the efficacy of three aluminum helmet designs on a sample group of four
individuals. Using a $250,000 network analyser, we find that although on
average all helmets attenuate invasive radio frequencies in either
directions (either emanating from an outside source, or emanating from
the cranium of the subject), certain frequencies are in fact greatly
amplified.
These amplified frequencies coincide with radio bands reserved for
government use according to the Federal Communication Commission (FCC).
Statistical evidence suggests the use of helmets may in fact enhance
the government's invasive abilities. We theorize that the government
may in fact have started the helmet craze for this reason..."

Jeebzus-H-Christ on a kaiser roll with cream cheeze folks !!!!
Perhaps the loons on domestic short-wave radio who have
been selling those grossly overpriced questionable gold coins, dollar
store LED keychain lights for $49.95 as "Berkie Illuminators"
and colloidal silver south pole magnetic piss-water as magic
curatives for baldness.....were right all along!

(Alex Jones must be whacking off like a chimpanzee with a bunch of

It is common knowledge that governments have burried underground
transmission stations.
These beam up in the microwave range, and the hats focus (like a dish)
the radiation in the brain.

The recommended solution is to glue the hat on, and walk on your hands,
upside down.

Hello All,

I just bought my aging father a BC246T so that he would be able to listen to the city around him. I bought it for him for Christmas. My concern is that I want to send it to him with remarks of "Don't open till Christmas" because I am in the Navy and am scheduled to Deploy in 2 weeks. Now, I just spent about 6 hours programming the scanner for Wichita KS. If the batteries happen to die while in the box waiting, will the systems and groups be deleted?? I say this because my POS Palm Pilot will delete all saved material if the battery dies.

Thanks in advance

Eric F.

"Gee, you cber can't even get that right." Butt Cornholer makes good
sentence! Butt Cornholer should quit drinking that woman's beer of bud
lite.

Hello all

i just got an irc-5 and live in cheshire england near manchester
airport

would love advice on what i need and what software and ariels etc so i
can

scan airtraffic, ACARS, military emercency services telecomunications
and decrypt satalite signals onto my pc so images of sat signals can
bee seen.

would be great to hear from you all with ADVICE whats COOL TO LISTEN
TOO and just about anything to do with scanning as a hobby

when i was young had an okd analouge scanner but since then not got
back into it now in 34 looking to this as my serious hobby

cheers all

Jed

well, you could always wear the hat on your ass, and it would block out the radiation from these "underground" sources.... but of course, this would open you to other radiation from other directions, unless you also wear one on your head. the best solution to looking "normal" here would be to line your grundies with tinfoil....

So, what are you saying? Are you implying you have access to
K1MAN's medical records? Please explain how you gained
access to Mr Baxter's medical records or how you are qualified
to make a psychiatric diagnosis? Where did you do your
residency in psychiatry?

Ii like the looks of the Deluxe Shielding Dress Shirt. I wonder how that would go at airport security? Then there's a shorts. You'd be stripped to nothing but socks and still setting off alarms!

And the hat, wow. "Many people can actually sense the differences in the levels of "mind noise" from RF radiation. Provide your brain a quiet place without interference to your mental processes from RF radiation." I'd love to do a double blind test with placebo hats and see the results!

B

That is good to know. As a Linux/UNIX/FreeBSD user and general
electronics tinkerer who happens to be blind, that kind of capability
is more than just another bell or whistle. It's the difference
between being able to really use the scanner and having the impulse to
drop kick it in to orbit.
I was thrilled to find
out how much I could use my BC780. The freqofnature site was where I
got the protocols.html document and I first started messing with the
780 by using an old DOS P.C. running Kermit in terminal emulation
mode. You can even set up hillbilly scanner control programs just by
writing kermit scripts. I have had a ball since one can read the
display and or various parts of it. That is the opposite of the
normal state of affairs in which, if you can't see the screen, you're
out of luck if you happen to hit the wrong button and wonder now why
it isn't doing anything.:-(

As an amateur radio operator, I would like to find a modern
transceiver with as much control as the Unidens have since setting
such things as CTCSS and memory programming are much easier if one can
use some means to directly read back information. For transmitters,
this is even more important since we hams, like any other licensed
users of the radio spectrum need to be sure we are operating within
the correct frequencies. It is a neighborly thing to do and the law
also says we must.

The ability to remotely control the functions of the scanner
and to read its operating parameters is a big force multiplier.
I have a BC780 set up at home that I can listen to from work or
anywhere I am on the Internet. I can send control commands to it and
even tell what channel or frequency I am on remotely.

If we ever get digital APCO25 trunking in this neck of the
woods, I will have to buy a newer scanner to receive it and hope that
I can get one that has the same digital control methods as the BC780.

In North-central Oklahoma, our local emergency services still
use a lot of discrete channels and CTCSS, but our Highway Patroll has
a couple of SmartZone systems in the Tulsa and Oklahoma City areas
that are audible from Stillwater and work perfectly on the BC780. I
can even capture the ID's in a file and sort them from busiest to
least used by using normal UNIX tools such as sort and uniq.

You need to set search mode and then be sure ID displaying is
on with IDN and the ID's will stream out with each transmission.

I don't care anything about his personal affiars, no interest at all.
My interest in K1MAN is limited to the interest I think we all should
have in the FCC trying to use and exploit someone less able to mount an
effective defense of himself to establish precedent that might be used
against the rest of us

as to his pesonal affiars, I don't care he ma be bipolar (except as
above) or for that matter if he fucks chickens (as long as he own said
chickens

I don't hate K1MAN. I don't know him personaly

Indeed I support his principled stand against the FCC. I do wish the
fight was between a man less limited in his abilty to defend
himself/make his case. I hope he prevails in this matter

You sir appear to one of those Fellows we see so often in here. If you are 178 percent something then you Hate it. I am more 74 percent supportor of K1MAN but I also yes the man has his faults. Who doesn't? I am concerned his faults may affect the outcome in ways that the FCC should be allowing

wether the Nurse that first comented on his Bipolar was attacking him or not we;; the nurse will have to answer

I am disgusted with the FCC targeting him for this sort of attack, and not moderating ait actions to accomodate his condiction

From: Hamradiostuffing <hamradiostuffing@hotmail.com>
Message-ID: <1131761102.512863.267210@g44g2000cwa.googlegroups.com>
Source record: 11208

This is a snip from EHAM

'Has anyone noticed the price jump on Icom's IC-706 MKIIG. At most dealers the pricing was averaging $769.00 and now the prices have jumped to $950.00 -- nearly a $200.00 dollar increase. I contacted HRO out of Atlanta and was given partial truth for the reasoning behind the jump. I think the 706 Mark IIG has been popular, and has also been a lot more expensive. The radio has stayed for quite some time in a reasonable range, but now has started a sharp rise up.

The reason I was given for the price gouge was the Japanese Yen is higher compared to the American dollar. By the way, is true but only by 12.5%, and that increase has taken nine months to rise. In this case the Radio should have only risen to around the $850.00 range. With our Ham community constantly battling to grow and maintain itself against an ever growing younger population more willing to go to the Internet. These Ham radio suppliers seem to be willing to price themselves and us out of business. If the reasoning is the Japanese Yen, why have other radios of Japanese make not made the price jump???

Sincerely,
KG4RVP"

I doubt it, but just to be sure it works when he gets it just pop a couple
Throw away alkaline batteries in it. Just make sure you put the switch to
the right position, and let him know to read up on using the rechargeables
that come with it for after the throw away's die.

Antenna is undoubtedly important, but have you checked your scanner in other environments? May be there is something wrong with it, especially if it's bought second hand?

Then kindly explain why so many Amateurs hold so much interest in
rec.radio.cb ? Theres plenty in there..some are even nice people... I
personally have no interest in K1MAN in one way or another. I also have no
real interest in the backstabbing and bitching that goes on amongst your
fellow Hams and Hams/CB'ers, I just read some of the threads and unless I
see something that aggrieves me i simply let it go... im not aggrieved now
btw. im simply trying to say you are wrong and a few Hams are interested in
things 11 meters.

At least I can choose the correct English words to put into a
sentence. That suggests that I'm neither (a) a programmer, nor (b) a
rec.radio.cb regular.

I wonder if each polygamist has multiple scanners?

Saint George Spectrum, Sat, 12 Nov 2005 4:05 AM PST
Did Jeffs get away?
http://www.thespectrum.com/apps/pbcs.dll/article?AID=/20051112/NEWS01/511120311/1002
Jeffs is known as the leader and prophet of a polygamous sect known as
the Fundamentalist Church of Jesus Christ of Latter Day Saints, with an
established following in the communities of Hildale and Colorado City.

Hi Doug,

Did you happen to find the new ambulance channel for Leeds and Grenville
or know a range that I can search? I can't find anything usable on
www.radioreference.com or maybe I'm not looking in the right place.

Paul :-)

To reply, change the "DOT" to a "." and canada to "ca".

4510. handheld scanner

Newsgroup: rec.radio.scanner

I may soon be in the market for a handheld, and I need it to be
cheap.... any suggestions?

I'd like it to have full 800 MHz coverage, but I'm more interested in
900 to 912 MHz.

A trunktracker is probably more than I need and more than I'd like to spend.

>is there anyway to recieve the trunk system on a pro 2040?

You can receive the channels - just program them in. (Don't program
Motorola control channels unless you like listening to digital noise -
that's all you'll hear on those channels.)

But the scanner won't follow a particular talkgroup - you'll just hear
whatever is on whichever channel it stops on.

You can tap the discriminator at pin 9 of the discriminator chip,
IC-2, a MC3361BP. Then you can run a tracker program and control a
computer-controllable scanner to track trunked systems.

> what is a descriminator?

The stage in the receiver that converts the frequency changes (FM)
into audio.

>and are there any mods at all for this scanner?

Probably mods to unblock the 800 MHz cellphone range but, since analog
cellphone usage is pretty sparse, and you can't decode digital
cellphone signals (not aren't allowed to - you can't), those mods are
pretty useless.

Yup, Mr Baxter does laugh. As the owner of several hundred
acres of prime Maine real estate, a large estate home, an
extensive well-stocked ham radio shack, owner of a
multi-million dollar trust fund, and having earned an undergraduate
and a graduate degree in engineering with honors, Mr Baxter sure
does laugh, *All The Way To The Bank* And he laughs at
you, sitting there in your 800 sq ft rented hovel, spewing hate
on the internet with your low-end computer and your dial up
connection, drinking cheap beer and waiting for your next
welfare check to arrive.

ROTFLMAO!

Hello !
Just wanted to view the FAQ for this group to see what questions it may answer for me before I start firing questions at the group.

I have an old uniden 200xlt that I just dug out but think that it has probably reached it point of no return.
My renewed interest in scanning has been brought on by helicopters and squads surrounding and hovering over the neighborhood next to mine last evening in Gilbert Arizona.

I am sure I will have a load of questions, but will be looking for a good versatile handheld scanner to replace this 200xlt.

Thanks !

No, I haven't yet. I was just going to type in a range of frequencies
as listed in the tables in the link below and see if I hear anything.
I don't have a digital trunk scanner so I'm not sure if it will work
or not.

The tables don't mention Leeds and Grenville BUT do mention Prescott
and Winchester. I really haven't read up enough yet. Maybe someone
else will step in with more info.

Hi Doug,

Prescott ambulance is covered by Leeds & Grenville Fire Control in
Brockville but still dispatched by the province out of Kingston,
Winchester is covered out of Ottawa.

Paul :-)

So if i tap the descriminator chip then somehow hook it up to the computer is there a program that will let me hear the trunked system?

4533. Chicago PD & Fire trunked - Yes or No?

Newsgroup: rec.radio.scanner
Date: 2005-11-13 16:43:40 UTC
From: Paul Carter <pwcarter@texas.net>
Message-ID: <m0qen1d838cgc5um7f753btj0gdo9hnqh8@4ax.com>
Source record: 11244

I'm moving from Texas to Chicago in a few weeks (I'll be living in the city, not one of the suburbs). I assumed that the Public Service (PD, Fire, EMS, etc.) in a city of that size would have to be trunked. But, while I was there on a pre-move visit a couple of weeks ago, I called a local Rat Shack, and the clerk told me that only the Illinois State Police is trunked.

Is this information accurate? If so, what type of trunk-tracking scanner do I need to buy to pick up the S.P. (and the C.P.D. / C.F.D., etc., if necessary)? I know that there's more than one type of trunking system in use today, but beyond that, I'm a clueless newbie.

Thanks!

Paul

The main dispatch for CPD is on 460.xxx conventional repeaters, 13
"Zones" and 7 "Citywides". There are a couple simplex UHF tac channels
as well.

CPD also has a Motorola Type II analog trunked system for detectives,
surveillance, special details etc.

CFD is dispatched on 2 VHF repeaters for Fire and 2 UHF repeaters for
EMS. They are working (slowly) on a UHF T-Band Astro system but that
will be a while yet...

There is also some specialty trunked systems around, such as an 800 MHz.
analog at O'Hare for city ops like Police and Fire.

The State Police used a pair of 10 channel EDACS analog trunked systems.
Cook County Sheriff is in the process of deploying an Astro 800 MHz.
trunked system. Suburban police are mostly on UHF T-Band for police and
VHF for fire, but there are several analog and digital 800 MHz. trunked
systems in the area.

Go to www.carmachicago.com for more info, and if you join the
CarmaChicago Yahoo group at http://groups.yahoo.com/group/carmachicago/
you can download a complete pdf file detailing all the Chicago
operations. You can also email me direct and I will send you the files
you want.

Enjoy!

There's a program (maybe more than one) that will provide serial port
signals to a scanner that can be computer controlled (only Uniden
scanners can be controlled that way at this point) to make it follow
the trunk groups. But it can be a cheap scanner - as long as it can
be computer controlled and it can cover the frequencies you want. It
doesn't even need a working keyboard or display, since you're not
going to be controlling it, and the computer can't press the keys or
read the display.

A RS Pro-97 or Uniden 246 will do. Or, if you want to prepare for
digital in the future, a RS Pro-96 or Uniden 396. (I'm assuming
hand-held. Everything but the 396 comes in mobile flavors too.) The
SP system is digital, so if that's important to you ("important", as
in a couple of hundred dollars more) your choices are the Pro-96 (or
2096 mobile), the Uniden 396 or, if you want computer control, digital
and mobile, the Uniden 996 which a) won't be out for a few months and
b) will carry a price tag near $900.

You have to decide whether you want analog-only/analog-digital,
computer control or just computer programming, fire tone-out (Uniden
only), frequency counter (Uniden only), etc. Look at all the specs,
and the prices (RS has in-store reductions on at least the Pro-97 -
maybe the 96 also - through the middle of December, but only in-store,
not on line), and decide which one best suits your needs,
reception-wise, feature-wise and price-wise.

Remember, only you can prevent ... er ... make the choice. :)

I still get the fire department fine, OPP still seems active on one of
their old repeaters and Brockville Police still use the old frequency
(Provincial Common) quite often; BUT I haven't found ambulance yet BUT
I haven't been doing a lot of searching either. Maybe I should just
add in the Prescott frequency and see what happens. :-)

4550. Antenna's for Dummies?

Newsgroup: rec.radio.scanner
Date: 2005-11-13 23:34:17 UTC
From: "E.F." <fadely@cox.net>
Message-ID: <X3Qdf.5327$mm5.1495@dukeread03>
Source record: 11262

Is there a web site out there that bring's it down to the basics?? I want to build an antenna for my portable YB400 but do not understand what a balun or turner is or what it does. I also need to find out if my small back yard is large enough for an antenna. What is overload and how do I prevent it...

...stuff like that

Thanks

EF

>is large enough for an antenna. What is overload and how do I prevent it...

Nothing wrong with posting the questions in this group.

How you build an antenna depends on the frequency you want to build it for.

Unless you're talking about a frequency lower than 10 MHz or so, a few square feet is enough. Vertical antennas don't need much space.

Overload is simply giving the receiver more signal than it's designed to take. Like putting 40 ounces of water in a pint container. Unless your receiver is within a foot or two of a portable transmitter, or 10 or so feet from a base transmitting antenna, it won't do any permanent damage, but it can cause all sorts of interference.

Try
<http://www.google.com/search?q=%22receiver+overload%22&sourceid=mozilla-search&start=0&start=0&ie=utf-8&oe=utf-8&client=firefox-a&rls=org.mozilla:en-US:official>
to read about it.

Uniden br330t is your scanner. 0 - 1300 minus cellular. great
scanner. also of importance is the ability to modulate in wfm which
some of the other's do not ;)

I have owned every handheld scanner from yupi, aor (all), rs, yaesu,
icom and this one is really great!!!! Just does not do cellular
zzzzzzzzz, and digital.

The State Police system is still analog EDACS, no digital at all.

It is true however that eventually the ISP system will migrate to the
digital StarCom system but the Chicago area will be the last to go, not
likely to occur until at least 2008.

Currently only the McLean County area (Bloomington/Normal) is actively
using StarCom, some other downstate sites are in testing phase.

There is more than one Lloyd posting here. Only Wiseman continually
thinks some guy named Lloyd in Alabama is the one and only
Lloyd posting here. All one has to do is examine the properties
of the post, but Wiseman, despite his correspondence Masters Degree
from DeVry, is unable to do that. BTW, I am not the offended
Lloyd. I have lived in Detroit all my life.

73,

Lloyd

From: GotBonus? <gotbonus@gmail.com>
Message-ID: <9jaef.188$K26.47@fed1read02>
Source record: 11281

I have an old bc200xlt that I am going to replace with a new model.
BUT I really don't know what I need.
I am in the Phoenix area...Gilbert specifically and would like to be able to
listen to police,ambulance, fire, air and if possible military in the area

I like the idea of being able to program it via software(I remember seeing
a site that will program "it" for 29 bucks...but I cant find the link).
If I get a digital unit are they backwards compatible for analog
frequencies?

Any recommendations for a good all around handheld?

Thanks

The Worst Speech of Bush's Presidency
by David Kusnet

For speechwriters drafting a presidential address for a patriotic holiday such as Independence Day, Memorial Day, or Veterans Day, there are three rules: Don't be wordy; don't be wonky; and, most important, don't be partisan. In his Veterans Day remarks today at the Tobyhanna Army Depot near Wilkes-Barre, Pennsylvania, President Bush and his staff broke all three rules, producing a strident speech that went on for almost 50 minutes, included a lengthy comparison of "Islamic radicalism" and "the ideology of communism," and concluded by attacking "some Democrats," while taking an implicit shot at "my opponent during the last election." It may have been the worst speech of his presidency.

At a time when Bush would benefit from sounding cheerful, forward looking, and above partisan politics, just as Ronald Reagan did during his second term even in the midst of the Iran-Contra scandal, Bush instead sounded like Richard Nixon or Lyndon Johnson during the worst days of the Vietnam War, although neither is remembered for flubbing a speech on a national holiday. It's as if Bush was reading from a cue-card that proclaimed, "Message: I'm embattled and embittered."

When a president speaks angrily and defensively for almost an hour, he might well be extemporizing, but that clearly was not true of this president and this speech: We know this because while the address may have seemed interminable, it was not ungrammatical, and it subjected listeners to a lecture about a bewildering array of personalities and events, including "Al Qaeda's number two man, a guy named Zawahari"; "his chief deputy in Iraq, the terrorist Zarqawi"; the Syrian democracy advocate Kamal Labwani; and "the Mehlis investigation into the assassination of Lebanon's former prime minister."

There is a time and place for such a detailed explanation of world events, but it is a formal speech at a major academic institution such as Georgetown or West Point -- not a commemorative occasion such as today, when the president should speak as the leader of the entire nation.

Moreover, Veterans Day is certainly not the venue for a president to attack the opposition party or single out a defeated opponent, as Bush did today. Towards the end of his speech, Bush declared, "While it's perfectly legitimate to criticize my decision or the conduct of the war, it is deeply irresponsible to rewrite the history of how that war began." He criticized "some Democrats and antiwar critics" for "claiming we manipulated the intelligence and misled the American people about why we went to war." Then he did something that no president in recent memory has done: He took what could be read as an implicit shot at the man he defeated, explaining, "Many of these critics supported my opponent during the last election, who explained his position to support the resolution in Congress this way." Bush then quoted Kerry's statement defending his vote to authorize the use of force in Iraq -- essentially holding Kerry up for ridicule, since Kerry is now a war critic. Do you remember Clinton criticizing Bob Dole in 1997; or Reagan criticizing Walter Mondale in 1985; or even Nixon criticizing George McGovern in 1973? Of course not -- second-term presidents tend to co-opt, not condemn, defeated opponents.

Bush's speech also adopted two of Nixon's smarmiest rhetorical techniques: attacking the nameless but nefarious "some," just as Nixon used to disagree with "some who say"; and lumping together very different people--the villainous "some Democrats," the "antiwar critics" who could be anyone from Russ Feingold to Ramsey Clark, and, finally, Kerry himself.

What's most remarkable about this speech is how Bush has bungee-jumped from the rhetorical high-road he usually takes to the lowest road any recent president has taken on a national holiday. Unlike previous presidents from both parties, Bush up until now has rarely attacked the opposition party, individual adversaries, or even ideological categories. (For instance, unlike Reagan and Nixon, he has rarely if ever criticized liberals or secularists.) So it is especially surprising that a president who generally avoided attacking his opponents in State of the Union speeches is now attacking them in a Veterans Day address; and it seems a sign that his shrewdest advisers -- Karl Rove, Karen Hughes, and Michael Gerson -- had no input into this speech.

As for the substantive points in the speech, they were either familiar or flimsy. Once again, Bush defended the Iraq war only after reporting on less controversial endeavors, such as the response to 9/11, the Afghanistan war, and efforts to destroy Al Qaeda.

Less familiar was Bush's lengthy comparison of Islamic extremism with the Communism of the Cold War era. Both, Bush said, were violent, dictatorial, and "dismissive of free peoples." But Communism was also atheist and internationalist, while Al Qaeda is neither. If current enemies have to be equated with twentieth-century totalitarianisms, why not compare Islamic extremism with fascism, which made more use of nationalist emotions and was less hostile to religion?

This was a speech that presented Bush's case implausibly and inappropriately. It's hard for a president to sound unpresidential on a patriotic holiday, but Bush achieved that dubious distinction today.

David Kusnet was chief speechwriter for former President Bill Clinton from 1992 through 1994. He is writing a book about workplace conflicts in today's America, Love the Work, Hate the Job, for John Wiley and Sons.

Thanks!! It works.

I think the last time I ever listened to LAPD live was
probably on 1730 KHZ from Arkansas in the Fall of 1966.

As most on this list are probably aware, the frequencies just
above the AM broadcast band were used for public safety between around
1930 and even in to the mid sixties. By the sixties, when I was old
enough to appreciate what I was hearing, the vast majority of public
safety radio traffic was in either the VHF low band of 30-50 MHZ or
the VHF high band of 150-174 MHZ. I remember hearing that a few
cities like Chicago were even going in to the 450 MHZ ranges.

If you had a good short wave receiver around central Oklahoma
or Arkansas at night, you mostly heard navigational beacons from the
coasts between 1600 KHZ and the top of the 160-meter amateur band.
Sometimes, however, one could still hear an echo of the not so ancient
past.

My most vivid memory of such an experience was New Year's Eve
in 1965. My family lived in North Central Oklahoma at the time and I
was tuning just above the AM broadcast band that evening and heard a
clear signal consisting of several mostly female and a few male voices
speaking in rapid cadence. Having watched "Dragnet," at times, I
thought this might be Los Angeles police calls. I think I heard
street names and so forth that made it pretty certain that this must
be LA.

I kept listening as the signal was unusually good that evening
and finally heard a male voice give the call letters followed by
"Los Angeles Police Department, ten-fifteen P.M." One can't get any
more positive of an ID than that.

In Oklahoma, it was now 15 minutes in to 1966. Later that
year, we would move to Hot Springs, Arkansas and I do vaguely remember
hearing Los Angeles a few more times on 1730, but I also kind of
remember listening for a period of time and not hearing them any more
that Fall and Winter so they must have discontinued the AM transmitter
in the Fall of 1966.

I must say as I sit here listening to the mix of conventional
analog and obviously digital transmissions that things have certainly

changed in 39 years.:-).

Again, many thanks.

I bought a new Uniden BC 895XLT scanner. To use it in Austin Texas, It is supposed to pick up Austin Police. All I can get is a loud "buzzing" on their channels (900-T channels). The reciever is a "trunk-tracker" and is for CTCSS opereations. I asked the police comminications officer about what kind of signal they use and they refuse to tell the public. Im a retired fire man and they have no low here prohibiting my listening.

Please, does any here have any kind of idea of what kind of signal Austin, Texas uses and if my new Bearcat BC 895XLT
is capable of working with their local signals.

I have the book but cannot make it work on the local police radios. It works great on other police and fire calls.
Thanks any one so much.

Thanks for the info. I don't typically delete any as I still have
fair capacity in my IC-T90A. Thats why I still leave the OPP in there
as well ... they still fall back to the old system.

I do have to get this new one figured out though!

Have you thought about using any of the vehicle repeater frequencies?

I'm sure there's either an ambulance base or hospital in the area.

Try these.

In accordance with this web site Austin is part of the Austin/Travis County Project 25 trunked system. The only frequencies listed for Austin are conventional which are linked to the Project 25 system.

http://www.radioreference.com/modules.php?name=RR&aid=16

Not sure if your 895 will track the whole system or what it's going to sound like when you enter them in to your scanner

Hi HotShot,

I have tried a few of the 413.XXX channels and not heard a peep out of them. The Ambulance service has changed over to Bell Fleetnet and dropped the Motorola channels other then using 150.100 for air ambulance and to contact Brockville Control to get them to open and close doors when the arrive back at the fire halls they are based at.

Not even sure what band to start searching to find the new channel.

Paul :-)

Hello everyone,

Does anyone know where I could get a schematic diagram for the above scanner. Preferably online. My problem is the scanner will not receive any signals at all, not even a signal strength.
If anyone has any answers I would appreciate it.

thanks, Niall

4598. SCANNING USA, How They Really Feel!

Newsgroup: rec.radio.scanner
Date: 2005-11-16 14:34:49 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <xK6dnR7dLcsS3ubenZ2dnUVZ_tOdnZ2d@comcast.com>
Source record: 11160

I picked up the December 2005 issue of SCANNING USA magazine yesterday. On page 8, under a title of "The News From Ground Zero", with a sub title of "Behind The Scenes, The Scanner Community Uncensored", was an interesting story directed at their customers!

The first paragraph begins with the words, "Obsessive, hostile, combative, angry and paranoid"! They claim these words apply to "to those of the scanner community"! Later they qualify that by saying this applies to a small percentage, about 10%, but they said it just the same. The entire story talks about all the different kinds of abuse they receive from unsatisfied customers, attempting to inquire about the status of their subscription.

The article go's on about how obsessed some scanner listeners are, and sites a few examples of occurrences that have been in the news. The story quickly changes to how professional SCANNING MAGAZINE staff is, and how serious they take the hobby.

According to SCANNING USA magazine, "We feel that to get a subscription is a privilege" If you rattle their cage they will "REFUSE your order". It must be nice to be so successful, and have so much business, that you can take this attitude! It's interesting to note, no one took credit for this article, as it was nameless!

I had attempted to subscribe to SCANNING USA myself, several months back. Some of you may recall, I inquired on "RR" as to how long this process took, as I had been waiting over three months. I wasn't obsessive, hostile, combative, angry or paranoid. I just asked, because like everyone, you want to get what you paid for. Some of you suggested I call them. I didn't because I didn't think it should be necessary. I'm glad now I didn't. God forbid I might upset someone!

My personal feelings are that it's very apparent that no one ever told the staff at SCANNING USA that "the customer is always right". Now we all know that isn't a true statement, but in business, when you're selling a product, it almost always applies, if you want to keep customers. I've worked many jobs where I've had to deal with obsessive, hostile, combative, angry and paranoid clients, in the computer industry for many years. I never had the luxury to tell them I will "REFUSE" them service. Nor have I ever read in any other magazine, the staff complaining about how some of their customers treat them! I'm paying $6.00 for a magazine about "SCANNING", not "WHINING"!

On the positive side, I liked SCANNING USA magazine, as evidence by the fact that I just paid $6.00 for it off the news stand (because my attempt to subscribe failed). But it's not something I can't live without. In the 60 pages, only 25 pages were what I would call useful content. The balance was

ads, and 29 pages of frequency updates, from around the nation, aka filler. I also like Monitoring Times, and Popular Communications magazines, both of which I subscribed to with no problems. Neither one of these magazines have ever complained about their customers! Maybe because they don't have internal problems servicing their customers.

Guten Tag Hans,
to answer your question hans.Trunked systems are basically lots of frequencies crammed into each other.As the future comes ore frequencies are required and eventually there will be no room, so thats when trunked systems come in.They use either tones to make contact with a certain individual and take them to a vacant frequency and so on and so on.German is my second language by the way:-)

Well, they are on VHF Fleetnet, check out Radioreference they're all there. If you don't have a trunking radio to be able to listen to them, then you have no choice but to use the vehicle repeaters. Try using them without the pl tone enabled. also search around 410-420 mhz and look for them there.

You will only hear the EMS on the UHF frequencies if there's a unit in the area. if not. your sol.

good luck.

Quit lying, you fat mentally ill retard.

Behold he shall ride upon a hard dick and his name shall be Lloyd Austin Davies.

And it came to pass that the king of knob jobs in Alabama, (as Lloyd is known) was gone for a long time, and some of the people celebrated and some speculated that he had died, some speculated that he was ill, some speculated that he was in Maryland at Ray Chason's apartment, and some even thought that the king of knob jobs in Alabama had been made a sex slave by Ray Chason and his butt buddies. It was then the people started to rejoice.

And when the niggers and crackheads heard the murmuring and rumours of the people they assured them that the king of knob jobs in Alabama was just busy sucking on one of his nigger neighbors big black dick and would address the people as soon as he could swallow that big load if nigger jizz. The neighbors in his hud apartment complex also knew that the project was the sucking of nigger dicks and telling lies and more lies, but they did not tell the people this for they did not desire to have a vice squad nightmare in the city of Deliverance Extras. Alabama liked to hear about the fat retarded one who proclaimed he was the king of knob jobs in Alabama.

And the niggers and crackheads reassured the people that everything was all right, and told them to prepare pyres and to cook meat, and to ice down beer and nehi soda, and to go out and buy potato chips and other unhealthy snacks from the traders who had immigrated to the kingdom from vietnam and the land of gaza. and so the went down to these little stores owned and bought these things. and they went home and warmed up their tv's, for the sabbath approached and the sabbath would bring more action from the mediocre football team at u of alabama, and the sabbath

would bring plenty of exciting nob gobbling action and goo gobbling from the king of knob jobs in Alabama.

The king of knob jobs in Alabama in reality is a ghastly pale porker who stands only 5'6" and weighs an unhealthy 290 Lbs. His skin is as white as copying paper due to his night job of delivering pizzas to the ghetto neighborhood where he dwells in a filthy, roach infested hud hovel. He doesn't venture outside during the daylight hours, instead preferring to play with star trek and dalek dolls, post lies and filth on the internet and jack off and dream of finally actually getting some pussy. Not stick pussy which his homosexual lover Steve Holsten feeds him several times a year when Lloyd goes for his visits, usually around Thanksgiving.

Lately, the king of knob jobs in Alabama has been consumed with posting pictures of someone he says is Roger Wiseman. In fact, the obviously botched purple rendering of somebody else has been cut and pasted, photoshopped and distributed all over the internet by the king of knob jobs in Alabama and his homosexual fantasy lover Ray Chason who is the king of knob jobs in Maryland. Chason who is also a porker has set up a blog of Roger's ex-wife "Regina" telling even more lies. Roger wasn't ever married to anyone named Regina. Of course Chason and Lloyd refuse to let truth get in the way of their lies, like their butt buddy friends who post lies, lies and more lies about anybody who reveals the truth about this band of homosexual predators.

Hi,

I have started a new Yahoo-group for the new Icom scanner
called IC-R1500

It's similar to the wellknown blackbox called PCR1000

The new is that this one now goes up to 3300 Mhz !

Just like the PCR1000 you control it from a PC
but the IC-R1500 comes with a remote control-head included !

Check out the new group here:

http://groups.yahoo.com/group/ICOM-IC-R1500/

You're welcome :)

Heading down to Sacramento in mid-December and I'm wondering if there are any good radio retailers in the region. Looking for a wide range of things, actually: scanners, frequency counters, shortwave... that sorta thing.

Hard to find good retailers these days.

If anyone out there knows of anything please re-post and lemme know. Thanks.

Randy

Sorry, might be my fault on that one. I clipped the actual message and left
only the sig... There was a "relevant" body posted with that, so it wasn't
just what you saw.

4622. Scanner to buy

Newsgroup: rec.radio.scanner
Date: 2005-11-18 23:55:07 UTC
From: Randy <REMOVErcss_97@hotmail.com>
Message-ID: <11nsqgqiv6ich59@corp.supernews.com>
Source record: 11184

I have had the Icom R5 for about 2 weeks now, took a little bit to understand the different commands to what I was use to with a Radio Shack model, but over all I would rate this model a 8 out 10
I might add it takes a little bit to understand the computer interface, since I didn't buy the Icom software and was able to get freeware software.

I purchased this unit from http://www.radioworld.ca
and have always been a fan of their great support in Canadian amateur Radio. I would recommend these guys because over the past 20 years they have been the best in Canada.

I purchased the Radio, with the antennae adapter and cable for under $360.00. I purchased my Radio Shack model 5 years prior for $499.00 plus taxes.......

Thanks again...and I am not any affiliation of radioworld, just an avid radio comm guy.

Randy

Cellular is digitally encoded, NOT encrypted. Go buy yourself a GSM
service monitor (if you have about $15 to $20 to spare) and you can
listen to your heart's content. You'll need a CDMA and a TDMA one also
if you want to hear most the traffic.

hi all
just a plug for a new site
there is a new forum for lmr,pmr,cb and repeater op's
and has irc chat

free online radio/electronics classifieds for Australia and the World
(give it a go...)

and a whole heap more in the works including a files section
the more who get interested the more i'll add :)

thanks for reading

Message-ID: <2b28b$437fe680$3ec20fde$454@news.chello.nl>
Source record: 11196

New Cellular/Cellphones is/are digital & encrypted.

CDMA
UMTS
2G 3G
GSM

For example GSM :

The voice is first digitized using a vocoder and a GSM-codec
then it is encrypted using a special encryption-protocol
that protocol is called A5/1 A5/2 ...etc
After that it is put in 1 of 8 timeslots (TDMA)
after that it is transmitted on a RF-carrier.

hhhuuuhuuuh ....not finished yet :)

...after that the RF-carrier could be
"frequency-hopping" but this is not everywhere implemented

It depends on the network-operator if and wich crypto is used,
worlwide there are just a few countries without it...

Here's a Yahoo-group wich discusses:

http://groups.yahoo.com/group/gsm-scanner

GSM-scanners , GSM-interception , GSM-monitoring
GSM-detectors , GSM-encryption , GSM-jammers
GSM-cryptophones , GSM-bugs , GSM-spyphones
GSM-Security , IMSI-catcher , SMS-tricks
GSM-tracking+locating , SIM-Cloning , Bluetooth-tricks
Cellphones , WiFi-phones , CDMA , iDEN , DCS , UMTS , DECT
Satphones , Iridium , Thuraya , Globalstar , Teledesic , Inmarsat

Sales or advertising of illegal equipment is not allowed !

We don't allow or encourage any unlawful behaviour !

This group is moderated wich means that it may take a while
before your postings appear.

There's a few lists about if and where encryption on GSM is used
and how to find that out using your own phone (monitor-mode)
...etc...etc.

Yes, but the initial keys are exchanged in the clear. Hash that against
the IMEI for the working key and you can monitor the GSM phone. The
phone sends its IMEI as part of the login sequence.
(CDMA shares a few similarities (no, they are not the same) with GSM,
but the frames are much larger.)

There are several manuals for GSM service monitors floating about the
net and they each address this in detail. The trick is you have to snag
the key exchange when the phone logs into the network on power up, and
that can only be done if you're on the control channel of the local site
the phone initially powers up in.

If there's one thing we should all be able to agree on, it is for all
intents and purposes, your digital phone is not likely to be listened to
by any hobbiest, it's a far too expensive proposition.

This is a post to QRZ.COM by K3VR and reads as follows:

Leo Meyerson, W0GFQ, is the latest high profile ham to come out publicly about Glenn Baxter's license. You probably remember Leo as the founder of WRL and Galaxy Electronics. Walter Cronkite also came out publicly against Baxter's (ex-k1man) renewal.

In fact, Leo just sent a letter to the FCC about Baxter. You can find the letter and a discussion of Baxter's renewal here:

"Leo Meyerson is an acknowledged pioneer in the field of radio. Leo is the founder of World Radio Laboratories and Galaxy Electronics. Throughout the years Leo has been very active in public service. A life member of the Quarter Century Wireless Association, Leo served as a National Director from 1977 to 1987. In 1991 he was named the QCWA Amateur Member of the year and in 1994 he was inducted into the QCWA Hall of Fame. Leo is also a life member of the American Radio Relay League, Society of Wireless Pioneers, and International Mission Radio Association among other associations. In 1980 Leo was elected a fellow of the Radio Club of America, one of the most prestigious radio clubs in America.

Leo Meyerson is the second radio icon to denounce Glenn Baxter, ex-K1MAN. The other, famous broadcaster Walter Cronkite, has publicly stated that he has experience with Baxter's lack of ethics. Cronkite also called on the FCC to deny renewal of Baxter's amateur radio licenses."

Message-ID: <43838C8C.3060609@jps.net>
Source record: 11108

I have a question about discriminator tapping, and please don't tell me to read up on in because I belive I have read all the web pages, the problem is that they are not consistent.

Bill Cheeks seems to recomment a capacitor in line with the discriminator tap, but even he seems unclear on the recommended value. It seems to vary from 0.1 to 10 uF depending on who you talk to, other's say you don't need it at all. A more recent post recommends a 10 K resistor instead. Also a small 0.001 uF cap is recommended by some folks connecting the tap and ground.

I am successfully monitoring pocsag and flex with none of this, but obviously there is always room for improvement. So everybody's opinions on this are hereby solicitied.

Also, it looks like I should build a data slicer; at this time I am using my sound card.

it really depends on the build of the radio.
the only sure way to see if you do need a cap &/or resistor is to scope the tapping point and look to see if you are 'loading' it too much or if you are getting varying results on decode, to see if there is noise therewhich is causing you the reliabilty problem.

i always do use a cap normally 1uf, but the value might need to be selected to ensure you get the freqs you need.

the calc for capacitive reactance will give you the info you need.

mike

The City of Dallas is UHF Conventional.
Most if not all of the surrounding cities are Trunked. Mostly on 800 Mhz.
The DFW Airport is Pro-Voice Digital, I am not aware of a scanner that
receives this format.

AOR units have fantastic receiver specs. I have numerous AOR receivers
and they outperform any of my RS, Alinco or Uniden scanners. (However
they do not have a model with built in APCO25 nor trunk tracking. They
make high end receivers with scanning features, not scanners with
compromised receivers.) They are also the number 1 choice of government
and intelligence agencies. That ought to speak well for their gear.
If you need APCO25 or trunk tracking, stick with Uniden or RS, but if
you want a high end receiver, AOR is a winner.

My .02,

Bob

4666. Digital Scanner - Michigan

Newsgroup: rec.radio.scanner
Date: 2005-11-25 16:52:39 UTC
From: "J. Mc Laughlin" <jcm@power-net.net>
Message-ID: <11oeg9d1pq69na3@corp.supernews.com>
Source record: 11128

I have some questions about the digital, trunking system being used in Michigan by governmental agencies. I have read several messages on this site that are relevant. It appears that one needs a RS 96 or 2096 (I have studied its manual), or a BCD396T (I have also studied its manual). The prices of these radios are similar.

It is obvious that the VHF system used by the Genesee County Sheriff is no longer in use. It is reasonable to conclude that all police services (except the Flint VHF system) have migrated to the 800 MHz system operated out of Post 35 of the Michigan State Police. I am about 7 miles from Post 35.

Questions:
1. Do all of the aforementioned radios work to receive the Michigan system?
2. While the BCD396T appears to have a few more features than the RS radios, reservations about the BCD396T have been expressed by members of this group. Please note your experience with these radios and express your opinions about the desirability (or undesirability) of specific models.
3. Should you know, where might one find the best mail-order delivered price on a BCD396T from a reputable company?

Thank you for such advice as you may be able to provide to assist in the goal of receiving the Michigan digital system. 73 Mac N8TT

Any value between 0.1 and 10 uF will probably do the job. It's not
critical.

The main reasons I use a 10 k resistor are twofold:

- Connecting or disconnecting an interface to the discriminator
output might cause a short-circuit. The 10 k resistor prevents
the discriminator IC from being loaded or damaged.

- With some discriminator ICs, especially the MC3361, some IF
signal 'leaks' into the discriminator output. The 10 k resistor
with an additional 2.2 nF capacitor to ground forms a simple
filter that attenuates the 455 kHz IF signal, while leaving the
digital baseband signal intact.

>Also, it looks like I should build a data slicer; at this time I am

Hello!

First I suggest you drop in at Radio Reference (
http://www.radioreference.com). It has to be one of the worlds largest
resources for the hobby! In addition to that, they have extensive reviews,
and user opinions on the subjects you're interested in. They also have a
frequency database like no other! It's totally free, but they do ask for
donations. With a donation as little as $5.00, you will have access to
programming features you'll soon realize you can't live without.

That being said, I live in Macomb County, Michigan. I have owned the Uniden BC296D, BC796D, and borrowed the BCD396T digital scanners, as well as the Radio Shack PRO-96. I currently own the Radio Shack PRO-2096 digital scanner. All of them work very well. I found the BCD396T a little overwhelming to program, as it uses a totally different memory management, and programming scheme. The reason I settled on the Radio Shack (GRE) is because of their AGC (automatic gain control). When scanning digital, often a few channels will come in much louder than others. The AGC takes care of this, so the volume level is more uniform. The newer BCD396T has AGC, but I didn't find that it worked as well as the Radio Shack offerings.

Uniden has a press release, regarding a new base/mobile GPS enabled scanner, due out early next year:
http://www.uniden.com/press/BCD996T_Release_FNL.pdf

Hope this helps!

Bill Crocker

FOR SALE:

Radio Shack (Uniden) PRO-2066 Scanner. This model is particularly good for monitoring railroad coms!

Excellent condition, includes original box, a Uniden AC power supply, telescoping antenna.

$65.00 shipped! (U.S. only)

Check out First Impressions, by Rich Wells, of Strong Signals:
http://tinyurl.com/c96se

Thanks,
Bill Crocker

4670. Re: Digital Scanner - Michigan

Newsgroup: rec.radio.scanner
Date: 2005-11-26 16:38:08 UTC
From: "J. Mc Laughlin" <jcm@power-net.net>
Message-ID: <11oh3q5mhdtjr7d@corp.supernews.com>
Source record: 11132

Dear Mr. Crocker:
Thank you for your useful and helpful communication. I had hoped that I would hear from you since I knew from other communications on this list that you were in Michigan and had useful experience.
I have consulted radioreference.com and noted their extensive frequency information. The reviews I did not see. I shall make a donation.
The first complex radio that one programs will inevitably seem overwhelming at first. Once one has mastered that radio's programming, the next radio will seem strange.
Problems with inconsistent volume with digital modulation are endemic. The cure is probably to be implemented post detection. Thank you for the observation that you have found the RS 2096 better at combating the problem than the BCD396T. If the BCD396T is dealing with inconsistent volume after detection, it is unlikely that a future change to the radio's "firmware" will help the problem.
The good news may be that the huge investment made in the present Michigan system tends to inhibit changes to another system. One may expect one of the present, high-end radios to be useful for a number of years for unscrambled, governmental radio communications.
Thank you again for your assistance.
Regards, Mac

4671. Recent Airline Company Frequencies ?

Newsgroup: rec.radio.scanner
Date: 2005-11-26 16:55:33 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <VsGdnTwP04gcDhXeRVn-rA@comcast.com>
Source record: 11133

Hello:

Have been trying to find some of the most used "Company Frequencies" for commercial airlines that
hopefully would be hearable in the northeast around Boston.

Have found several sites that list some, but these listings are apparently really
old; still have Eastern airlines, etc. on them.

Does anyone have a list of the primary used ones, or perhaps you can direct me
to a link that has reasonably up to date listings ?

Thanks,
Bob

BTW: Are ARINC conversations encoded, or possibly digital ?
What modes are used by them ?
Are there a few freq's that are used most often ?

4681. Re: Galaxy Electronics Founder Leo Meyerson Asks FCC To Deny K1MAN

Newsgroup: rec.radio.scanner
Date: 2005-11-26 18:19:42 UTC
From: Scott in Baltimore <sDcOoNtTtS_PuAnMiMtE_69@yahoo.com>
Message-ID: <dma8vuagk1@xuxa.iecc.com>
Source record: 11143
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.cb,rec.radio.scanner,rec.radio.broadcasting

From ARNewsline #1476:

ENFORCEMENT: WRL / GALAXY ELECTRONICS FOUNDER MEYERSON ASKS FCC NOT TO RENEW K1MAN'S LICENSE

Another well known ham has written to the FCC asking the agency not to renew the license of American Amateur Radio Association founder Glen Baxter, K1MAN. In a letter to FCC rules enforcer Riley Hollingsworth that's been posted in cyberspace, Leo I. Meyerson, W0GFQ, charges that Baxter has been distributing unsolicited commercial e-mail that uses his name to promote business interests. He goes on to say that his now public letter is intended to let the FCC and the public know that Baxter has no authorization to use his name, photo nor that of Meyerson's wife. Nor does he support any of Baxter's activities, business or otherwise.

For those of you new to the hobby, Leo Meyerson, W0GFQ, is a walking legend. He was the founder of World Radio Laboratories and Galaxy Electronics. His simple but effective Globe Chief and Globe Scout transmitters were the first station for many new hams in the 1940's, 50's and 60's. He was also among the first to bring high frequency transceivers to ham radio through his Galaxy product line.

Meyerson's letter goes on to say that he is aware that the FCC has issued a $21,000 Notice of Apparent Liability against Baxter's Amateur Radio station. He ends by asking the Commisson to not renew Baxter's license which has been set aside by the FCC.

Meyerson's letter to the FCC concerning Baxter's pending license renewal is the second such note this year. As previously reported, retired CBS Newsman Walter Cronkite, KB2GSD, wrote the FCC last June after Baxter allegedl;y refused to stop using 1996 era promotional material containing Cronkite's voice. (Via E-Mail)

it receives any frequencie you can program with:

WinScan780,
Arc780,
Arc898T,
ScanCat Gold,
TrunkScan Pro,
ScanPro 780,
ScanPro 895,
and
Uniden BC898T

Because thats all the programs that where on the puter.. Any other
questions?? But it sold so don't bother asking them :-)

Why would I need the nothing that Ebay does not offer?? You get nothing from Ebay, i.e. they will not help you with anything, all they want is your money!! They are not the Inernet police, They will not kick ass holes that bid and don't pay, they will do nothing to ass holes who sell you something other then what it says in there auction!! And if you think they will help you when you get fucked on Ebay your smoking some really good grass.... I sold the unit and the buyer paid in full before it was even shipped to her so why would I need " You've now lost any sort of seller protection eBay offers." hahahaha They don't offer any protection to anyone.

Hey all,

I'm having a helluva time programming in trunked systems. I've tried following the manual verbatim but it have had zero luck. Can anybody recommend a "Programming Trunk Systems on RS Scanners for Dummies" type site or something similarly helpful?

I have been able to get frequency listings, talk group IDs, and the trunking system type but not doing something correctly. I'll keep plugging away at this and check in here for a scanner savior :)

THanks,

OM

Have you tried Win97 software for it?

http://www.starrsoft.com/software/win97/default.asp

Go ahead and spend the money for it (and a cable):

http://www.starrsoft.com/software/Win96/cables/cables.html

It will turn programming from a chore into a pleasure.

4693. Here comes the Digital TV disaster

Newsgroup: rec.radio.scanner
Date: 2005-11-27 16:29:50 UTC
From: Kookwatch 968549 <undermyhat@yahoo.com>
Message-ID: <9271a$4389ed07$d1cc5677$26533@snip.allthenewsgroups.com>
Source record: 11055
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave

Here comes Digital TV !!

http://www.dtv.gov/

(....otherwise known as the FCC's pending DISASTER when regular
analog broadcasting goes off the air and suddenly millions upon
millions of TV sets suddenly are "obsolete" and no longer work)

Can you just imagine what will happen the first weekend after
the DTV shi+ hits the fan and Bubba can't watch his BALL
GAMES or his NASCAR on his, now utterly useless TeeVee...?
Unless of course he buys a $100 set-top converter box for every TV
Want to talk about an excuse for rioting in the streets? Here it is, or
will be soon!
Not to mention also the fact that DTV will cause RFI to public
service commnications to go thru the roof, including cell phones which
will be useless anywhere near the transmitter. (this should be fun)

http://www.dtv.gov/consumercorner.html#obsolete

"The target date for the end of the transition from
analog to digital television signals is December 31, 2008.
That date may be extended, however, until most
homes (85%) in an area are able to watch the DTV
programming. At that point, broadcasting the
current ï¿½analogï¿½ channels will end and that spectrum
will be put to other uses. Until the transition to DTV
is complete, television stations will continue broadcasting
on both their digital and analog channels."

DTV broadcast is HIGHLY prone to multipath distortion problems
caused by shortcomings of the 8-channel vestigial sideband (8VSB)
transmission standard, which has been mandated for use by all
broadcasters in the United States by the Federal Communications
Commission. In short, if you think it was hard to get TV reception
back in the 60's and 70's before cable using a pair of rabbit ears
then you ain't seen nothing yet! With DTV you get nothing if even
one bit is missing from the broadcast stream. Black screen DOA.

Finally, here is the URL of the people who pushed this
pending disaster thru Congress: http://www.dtvcoalition.com/

Other articles on how flawed DTV really is and how
consumers are likely to react in anger when their sets
go dark in late 2009: http://dtvfacts.com/

Most people already have the necessary converter. It's called a cable
box. The STBs for the rest of the peeps will most likely be ca $25.
Closer to that than $100.

4696. PRO-2051's for $99.00 + shipping

Why would you give them $100.00 for a non-auction when the ones that are
being auctioned are going for an avg of $75.00 to $80.00??

Oh, really? High-quality, flat-response tuner / IF strip / demodulator,
plus a scan convertor to convert from any of the gazillion digital
formats to NTSC, and RF modulator and power supply, all for $25 consumer
price?

People talk like this whole DTV conversion is coming as a surprise.
It's been planned and in the news regularly for the last decade
(literally). This isn't some overnight switheroo that Congress is
trying to pull. There's been plenty of advance notice. If some people
choose to ignore the news and are surprised four years from now when
they can't watch regular TV (and that is only if they receive over the
air only, which applies to roughly less than 15% of the country), so be
it.

Personally I'm looking forward to the highly increased picture quality
and digital surround sound that DTV can provide. If some people want to
stick with their 1950s technology, so be it; but don't hold it against
those of us who want to move into the 21st century, thank you very
much. Many parts of the world like Japan and Western Europe have pretty
much moved to DTV already, and those countries haven't been engulfed in
mobs of angry people who can't watch TV anymore.

The problem isn't moving into the 21st Century, Mr. Futuristic Modern Dude.
We're already there. The problem is *removing* the existing broadcasts.

There'd be room for everyone if Congress wasn't so easily bought by
commercial interests bent on forcing the public to throw away literally
TRILLIONS OF DOLLARS worth of equipment.

I'm as far from a treehugger as one can get, but have you given any
thought whatever to the landfill problem when hundreds of millions of
television sets suddenly need landfill for disposal?

That's completely silly. No one could make *anything* for $25 if they
are forced to do it in runs of ten or fifteen at a time because the
suppliers don't have parts.

> http://www.ati.com/products/nxt2000/features.html

Vague.

> http://www.st.com/stonline/press/news/year1997/p686p.htm

Here you might have something... except the chip has to be about 25
cents to pass the rule of 10. Figure $8 in 10,000 qty, then your
set top box might make $100.

Right.

USCG aircraft will only use AM in the civilian (118-134) and military (225-400) aircraft bands. On the HF bands they'll use USB. On the VHF marine radiotelephone channels - and on government freqs such as 164.55 - you'll hear narrowband FM,

Ever price one of those cable boxes? They probably don't cost much to build, but if you go to buy them, they're on the order of $300-$400, at least the addressable ones. The cheapies, that do no decoding still run into the $100+ range for one that doesn't break in a month or two.

Source record: 11074

When the band is redone, the FCC channel numbering scheme will change to accomodate the NPSPAC channels (12.5 KHz offsets) in the lower 120 channels. Motorola's SmartNet controller transmits the FCC channel number to the subscriber unit when assigning a talkgroup. The subscriber radio calculates the frequency from the channel number. Unless the firmware in the subscriber unit or scanner is updated, those receivers will not know where to listen. Personally I would not buy a scanner unless the manufacturer commits to a post rebanding firmware change.

5 Newsgroups?

and my set top box was free when I signed up. I get excellent picture
and sound and no interferrence between the ham stations (One in the
shop and one in the house). 1.8 through 440. Legal limit 1.8 through
30. 100 watts out on 50 MHz and 200 watts on 144 MHz.
I'm running an Alpha 76A in the house for HF and a Henry 2K-4 in the
shop.

Remember Digital is not necessiarlily HDTV, but they will be moving up
out of the VHF bands.

BTW, the computers and ham rigs are less than 3' apart and the network
cable runs with the coax cables for a ways.

I can run a 2-meter HT on the desk with the computers running although
if I get within about a foot of this one it will open the squelch.
Still I can set the HT next to the left side of the monitor and it
works fine.

Tain't nearly that bad. It depends on what bits are missing, but what
happens it the picture will start to break up if enough of the right
bits are missing.

You do need a good UHF antenna for local HDTV at present and probably
will for Digital as well. Rabbit ears definitely will not cut it. and
if you live near woods it's likely a small antenna on a roof mounted
tripod won't either. I get a reasonably good signal for 60 to 90 miles
and do copy one station quite well from nearly 100 miles (Traverse
City), but their digital antenna is out this direction so I'm not sure
just how far it is to the antenna.

Yup. Free.
Both my cable box and my digital satellite box were free with a years
subscription. Actually the same went for the cable modem at 3 Mbs
with free installation which meant running almost 200 feet of cable .
It's a 130 feet from the pole so that's 160 feet and there are 3 drops
in the house so I guess it's a tad more than 200 feet along with 3
splitters which are cheap.

I'll probably keep right on using the one old 37" analog set down in
the basement until it gives out. The tuner gave out long ago, but I
use it as a monitor with the VCR as the tuner.

Trunk PCR Version 0.7.182 Update Is Now Available for Downloading..
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a couple bugs and adds some new features...

Sep 18,2005 - Fixed: Manual Stepping Now Tracks an Individual ID. (Broke
it in 177)
Sep 19,2005 - Added: Motorola 800Mhz ReBanding Support
NEW 800MHZ Band Plan: (Could Change!)
Base Freq Step Offset Low High
851.03750 12.50 2 2 39
851.53750 12.50 40 40 77
852.03750 12.50 78 78 115
852.53750 12.50 116 116 153
853.03750 12.50 154 154 230
854.01250 25.00 231 231 260
Sep 19,2005 - -----: Changed Trunk Settings MOTO 400/VHF to
Custom/Extended...
400 and VHF use the Custom Map. 800 Rebanding
uses Extended...
Sep 19,2005 - Fixed: Switching Between Moto Systems doesn't Reset
Settings..
Oct 09,2005 - Added: Selection of when New ID's are Saved
Oct 09,2005 - Added: Selection of how Hits are Counted
Oct 10,2005 - -----: Trunk Menu Edit Options - Always Enabled for Trunk
Banks.
Oct 17,2005 - Added: Viewing of Group Patches in CC Activity Window
Oct 17,2005 - Added: Viewing of Affiliations in CC Activity Window
Oct 21,2005 - Fixed: Saving Display Mode...
Oct 21,2005 - -----: Changed Color and Fonts in CC Activity Windows
Oct 22,2005 - Added: Display of MOTO Group Types in CC Activity Window...
Oct 23,2005 - Fixed: Improved Hunting of CC on Data Loss...
Oct 23,2005 - -----: Increased Radio ID Limits...
Oct 24,2005 - -----: Mode & IF Options Now set to Defaults when Changing
from Conv to Trunk.
Oct 24,2005 - -----: Increased TrunkBanks to 27 from 23...
Oct 24,2005 - -----: Default TrunkBank Now set to 27 (?)...
Oct 24,2005 - -----: Increased ID Descriptions to 40 Characters...
Oct 25,2005 - Added: Display of Edacs AFS format in CC Activity Windows.
Oct 27,2005 - Added: Show Search Results from Search Limit Banks.
Oct 27,2005 - Added: Printing of Above Search Results.
Oct 30,2005 - Added: Printing Group/Radio ID's.
Oct 30,2005 - Added: Print Preview for Above.
Oct 30,2005 - Added: Export Group/Radio ID's to Excel CSV File.
Oct 30,2005 - Added: Export Search Results to Excel CSV File.

Oct 30,2005 - -----: Display Mode of ID's in CC Activity Windows
Immediately updated...
Oct 30,2005 - -----: Search Results Limit Set to Donation Amount.
Version 0.7.180 Released 10/31/2005

I got a $20 plain-jane antenna and it works fine for HDTV.

My situation exactly. While I'm at 2500' ASL and my local stations
are at 8800' and 4500', there are higher peaks between them and me. So
signal levels are down and reflections off local peaks (that are
line-of-sight to me and the transmitters) are as strong as those via
the obstructed path.

This is a technological disaster, which of course is what you get when
you put politicians in charge of science projects.

DTV, BPL, the morning after pill, all screwed up by politicians with
agendas.

I meed a good excuse to quit watchin' the "BOOB TUBE"
maybee this is it...

I us'd to repair TVee... Most people were satisfied with
a picture that looked like a pair of those 3D glasses when
the show wasn't in 3D...

If you done anything to make it better they complained it
jus' doesn't look rit'...

R!

Currently, there is a firmware issue with the PRO-2051, that prevents it from interfacing with software. Also it does not have any alpha-tags (if that is important to you), and after re-banding is in effect, it won't work properly in some of the 800MHz trunked systems.

If you're looking for a base/mobile equivalent of the PRO-97, check out the PRO-2055. However, both the PRO-97, and PRO-2055 may have issues after re-banding as well.

Scanners do not do very well on CB. One reason is, that if the scanner covers the CB frequencies at all, it is at the very low-end of the scanners capabilities, so performance is not optimal. Another issue is that none of the scanners come with antennas that are anywhere near being the proper length for CB frequencies.

You would be better off just buying an inexpensive CB.

>will help the problem.

Since the 396's only AGC problem is an attack time that's too long by
an order of magnitude or so, it can easily be fixed by a firmware
change.

The other main complaints were silk screen rub-off, which was due to a
manufacturing glitch on some of the radios in the first production
run, some early speaker failures, which Uniden replaced under warranty
and some "distortion on low volume" complaints that don't seem to be
very repeatable.

Currently using the RS Pro-91` and see that RS has the 97 currently on sale for 149.00. plus I have a RS $10.00 off coupon burning a hole in my pocket.

I have seen words here regarding rebanding??

Is it worth it at this time to move up to the pro-97.

Wife is somewhat skeptical (she suffers some from tecnophobia) about 91 vs 97.

Any advive welcomed.....

Tom in Tomball, TX

You're talking about $150 delivered to have a scanner that you want.
How long do you have to enjoy it for it to be worth $150 to you? That
time period isn't very long for me. Folks talk about making sure you
can upgrade firmware to account for rebanding, etc., and I understand
that to some degree, but the other side of it is that there's stuff to
listen to NOW. In my view sitting around paralyzed by fear of
obsolescence isn't any way to do things, particularly concerning the
relatively small amount of money you're talking about. If you were
kicking around dropping a grand or something, that would be different.

>

Yes - The VHF-FM marine band as well as the USCG Group near here, Group Buffalo,
as well as USCG activity on the civilian and military air bands.

>any others?

Yep:

1. Local government (DPW and highway crews, civil defense/emergency management,
DOT, hazmat teams, and other governmental agencies like that which don't fall
into the police/fire/EMS category.

2. Public and private security/police organizations at nearby colleges and
universities....which I don't necessarily lump in with police since some of them
are duly sworn police officers while at other schools they are not.

3. Ham radio operators in the 6m/2m/70cm bands.

4. NOAA weather radio broadcasts.

The local WalMart had a 24" color on sale for $99. The 19" for
the same price included a built-in DVD/CD player.

Cheers and happy shopping

I'm not "whining" about the mountains, I'm pointing out that a bunch
of dumbshit politicians with dollar signs in their eyes made some
stupid decisions (pardon the redundancies) and are trying to foist
upon the public a technology that is both unnecessary and unworkable
for a large number of people.

When my government takes something away from me for no good purpose,
then I'm going to complain about it.

It's also curious that when I asked the chief engineer of a local VHF
TV station, who is a personal friend, why they didn't put a UHF
translator out my way he replied that they have wanted to for years
but the FCC would not grant a license. That spectrum is too valuable,
doncha know. So public interest isn't important, revenue is.

And I sure don't to pay big bucks to know what the weather is, when I
can walk outside and get an accurate picture, rather that some
wild-ass guess.

Translators are granted on a ''Secondary'' status meaning that if a
higher priority use is sought for the channel the secondary user must
vacate. Otherwise they chug on for years.

It depends on where you live, and what frequencies are currently being used in your area. From what I understand, they have already run into significant problems, which may cause a delay in the original plans.

Here are a couple links to keep tabs on the situation:

http://www.apcointl.org/frequency/800hp.htm

http://www.wpascanner.com/reband/reband.htm

I wouldn't let it stop me from buying a scanner today. In the event that it is affected by re-banding, it can always be used for everything else it covers.

All five of the Commissioners are political types - have to be in
order to be appointed and confirmed to that position.

Two with technical degrees? In your dreams. The last "engineer
Commissioner" was George Sterling during the late 1940s. In the
1980s some of us wanted to have the Comm Act changed to require at
least one to have an engineering degree but we were shot doen by the
political types.

And at this moment you can get one (16x DVD+/- R/RW DL Pioneer DVR-110) from
Meritline for $47... simply bloody amazing..

Well thank you Mr Helper! No what I was asking earlier in the thread is since everyone is so quick to point out the rules would you mind sharing some model numbers of units that meet this type acceptance? No one has steped up with this needed bit of knowledge. I do know (by service monitor measurement) that the pair of Motorola PC-10s I have pass on 154.600 and 154.570. Since those are used in most of the fast food places around I'd love to find a set that would be ok on the bottom 3 as well.

The advice of the full quarter wave (just under 6') is spot on. This will
give you the maximum bandwidth and gain of any moble antenna you could use
at 40 MHz.

The above EBay antenna (even if it were set up for VHF Low, which it does
not appear to be) would be a real compromise in gain and BW.

Dear Mr. Klein:
You too have been helpful. Thank you.
Slow squelch actuation is also a major deficiency of the IC-R2 that I have used for some time. That, of course, sounds the same as a slow AGC, but has a different cause.
I have been able to confirm that the BCD396T will be able to be re-programmed when the frequency scheme in the 800 MHz range is rearranged. It is said also to be true for the RS radios.
I was not able to find useful reviews at the site mentioned by Mr. Crocker. Other reviews, and your comments, have provided assistance.
A BCD396T has been ordered as my Christmas present. In the holiday time, I will master its use. Having computer programming is a big plus. I routinely use a computer to program my IC-R2.

Any other observations or opinions about the BCD396T or the Michigan digital system are solicited.

Thanks again. Mac

I would normally agree with your comments, however, Uniden has already had a few firmware updates, but has been unsuccessful in resolving the AGC issue. To date, none of the three "digital" scanners made by Uniden can handle AGC as well as the Radio Shack (GRE) offerings.

This is a great article. Thanks for posting something worth reading!

4795. Here's Grove's list of models Rebanding safe.

Newsgroup: rec.radio.scanner
Date: 2005-12-01 21:05:27 UTC
From: Hatfield <utility_infielder@earthlink.net>
Message-ID: <1133471127.759227.43230@o13g2000cwo.googlegroups.com>
Source record: 10957

http://www.grove-ent.com/radiorumors.html

Above is a small article posted by Grove Enterprises providing their customers with info on which scanners can be safely bought for use after rebanding....

1 "The BCT-8/898T/296D/796D/246T/BCD396T/BC330T can all be reflashed with software updates that will be available from Uniden on their website".

2 "Here are the people who will have to get new scanners if they are tracking a Motorola system. Owners of a Uniden BCT-235/BCT-245/BC-780/BC-250D/BC-785D or a Radio Shack Pro-91/92A/92B/93/94/95 handhelds or the Pro-2050/2052/2053/2055/2066/2067 base and base/mobiles, they will have to replace their scanners when rebanding goes into effect in their area or they will no longer be able to trunk track their local systems." (..."The customer will have to buy a new scanner to monitor any system that changes frequencies due to rebanding. If their system doesn't have to move, they will not see any changes.)"

3 "Reportedly, the only safe RS scanners are the Pro-2096 and Pro-96 (reflashed) and Pro-97/92 (reprogrammed). Any other RS scanner will have to be replaced if their Motorola system is impacted by the rebanding plan."

So for example Grove seems to be saying Pro-92 is rebanding safe, Pro-92A/92-B are not.

Unsuccessful? Or they just haven't tried? 1.09 still has MUCH too
long an attack time. Maybe some day they'll actually have someone
shorten it.

Throw out everything you know. Dynamic memory is completely different from anything you're used to. Once you can think "System-Group-Channel", instead of "Bank-Channel", you'll find it fairly easy to program.

Download the UASD (the program used to program the scanner) from Uniden's site now and start setting your systems up. (Use Radio Reference <http://www.radioreference.com/modules.php?name=RR> as your source.)

Find a charger that will charge 3 AA batteries at a time; that's one of their oversights - most chargers handle 2 or 4. (You can charge the batteries in the scanner but if a battery fails catastrophically, would you rather destroy a charger or the scanner?)

I highly recommend Thomas Distributing

http://www.thomas-distributing.com/

for rechargeable batteries and chargers. I've done several thousand dollars of business with them and have never been less than 100% pleased. There are a few Maha chargers that will charge three batteries independently. The Ansmann Energy 8 and 16 are also good pieces. The LaCrosse BC-900 is also a fine piece.

No connection other than being a thoroughly satisfied customer.

Dear Mr. Klein & Mr. Williams:
Useful ideas. I do not have the time to "play" with the programming program at the moment, but it is wise to download same. It is reasonable to believe, from reading the radio's manual, that programming will be reasonably straight forward. I do not have to unlearn anything.
I have a charger for two batteries. Excellent idea to acquire a charger capable of dealing with three batteries.

The APCO site suggests that our local Michigan digital system may not be converted (by shifting everything down 15 MHz) for some time as we are on the Canadian side of Line A.

Thanks for your assistance. The box with radio has arrived and awaits Christmas. Regards, Mac

> BCD396T!

It's not even really that it's difficult. I mean, if you do what it says in the manual, you will successfully program the scanner. It's just tedious, time-consuming, and completely unintuitive, such that you continue to NEED the manual (and potentially hours of time). Honestly, I can become proficient at even an Icom push-this-hold-that-turn-this-other-thing scheme more quickly than program a GRE for trunking manually with any efficiency.

OTOH, with Win9*, it takes only a few minutes to be swapping trunked systems in and out of the scanner at will.

If RS had any idea what to do with itself other than stumble and bumble toward death, it would see about paying Mr. Starr $5 a unit or something to license that software and include it in the box.

Because many "average" scanner users have multiple scanners. Some are even
HAMS. And some others work in jobs where they have one or more two-way
radios in their vehicles in addition to one or more scanners. And on the
Amateur Radio side of the website is more cool stuff that "average" scanner
enthusiasts may like.

It's a mess if you have a bunch of mics and speakers in most vehicles. Our
equipment cuts down on the clutter because you only need one microphone (for
two way radio) and two speakers (one for Selected Audio; the other for all
other Unselected Audios) for up to 8 radios.

What do you know of that's even close in price that does what the C250 does
including:
-1 mic (any mic)-4 radios (any radios)
-crossband repeater (VOX or COR)
-PA output
-Selected & Unselected Audio Outputs with separate volume controls
-Busy Light
-expandable to 8 radios
-Hookswitch function
-Multi-Cast
-Multi-Rpt

???

Well I guess that's the reason for the price...apparently you have no competition! That sill doesn't fully justify the price, for what you're actually getting.

In a commercial, or industrial market, where people pay several thousands of dollars for a two-way, they probably wouldn't consider your prices to be out of line. But for the amateur radio, or scanner hobbyist market, it is way too expensive.

Just my opinion of course, but then I could be a potential customer. Maybe your company should consider a non-commercial version that's more affordable?

I built a similar project abvout 20 years ago and it was very nice to
only have one microphone and one speaker to deal with.
In my version the selected audio was 100% and the others where
about 20%. I could mute the others in an emergency.
MAde it much easire to manage my ham radio, my CB, company business
band and the 3 scanners.

Of course my "controler" cost me about 50$.
I added a I/O for a Headset and a vox for another ~30$

$649?
Yikes

Mine too. He talks about the average scanner hobbyist, but prices his
products WAY above the reach of the average hobbyist - who has to
think twice before buying a $50 outside antenna.

I'd rather build my own than buy from someone with that attitude - let
alone that pricing structure.

And mine are only 8X for DVDs and 40X on CDs. <sigh> Left behind
again<:-))

BTW I live about 14 miles from the world's largest Poly crystal
Silicon supplier. I think they also sell wafers. (very large wafers).

In 1960 a single crystal rod of the best purity you could get sold for
$165 a gram. Today the poly is of higher purity than those 10 pass,
float zone refined rods and as I recall it sells for something like a
couple bucks a Kilo. . Back then a single crystal rod of 3/4"
diameter and 16" long was about the biggest thing you'd see with poly
rods about the same size.
Now days wafers are running some where between 10" and 14". I'm not
sure the current size as I've been away from it for a long time. Poly
crystal rods are huge. It takes power hoists to move them.

Some time in the late 60's (as I recall) they were able to change to a
new method of sawing wafers which reduced the waste by about 50% or a
little better. At least one firm went out of business as overnight
they had doubled the single crystal yield with no increase in, cost,
time, or labor.

Last week there was an article in the local paper that the plant is undergoing another expansion. Not just an expansion, they are doubling the plant capacity and they are already the world's largest supplier but a good margin.

They have gone from a small operation in a cement block garage while using an old two story farm house for an office building to one huge complex.

Think about the amount of silicon used in a transistor, CPU die, or even the CCD in a camera which is probably the largest typical die and then think of the thousands of metric tons of the stuff this place produces.

The engineering costs to produce any particular IC or CPU are high, but once in mass production it drops to almost unbelievable levels. Remember CPUs starting out at a $1000 dollars or more and in about a year of so they are less than a $100 and often still in production. They end up being dropped from production, not because they are losing money as they aren't, but the new *stuff* brings a premium price so it's a no brainer to make the switch. Sure the price is high so they can write off the engineering costs in a hurry, but they are still making a healthy profit.

The same is true for tuners, decoders, converters, and other set top boxes. As that stuff is mass produced and there is a tremendous market for it, they will be moving to one and two chip designs dropping the costs to a couple of dollars where the broadcasters and cable companies can give them away with each subscription.

A nearby company purchased a large batch of high quality 19 or 20" LCD monitors. The cost was some where in the low $200 range. What was the price on those just a year ago, or two years ago if you could find one that large? <:-)) Currently the price is one of supply and demand for those. They could be sold far cheaper to the individual and it won't be long before they are.

Now If I could just convince my wife of all the good reasons for getting rid of the old 19" CRTs here and going to 21" LCDs. <:-))

I hate to say, or admit this, but I remember when the new TV sets finally came out with 21" CRTs <:-)) and those *were*expensive* Carried forward to today's dollars they cost more than one of the big 50 some inch plasma sets.

I own the Pro 2052
and it is not bad...but it does have a limitation...it can not scan
trunked and standard bands at the same time - one or the other
also it can only scan one bank of trunked freqs at a time

For cities with tons of talk groups this is a problem since there are
only 50 entries per bank in trunked mode (Seattle police alone have more
than 50 talk groups)

If you are listening to non trunked freqs it is not bad at all 20 banks
of 50 channels makes it easy to seperate various agencies into own bank

if you are going for trunked listening... it would not be good choice if
there are over 50 talk groups per command channel that you want to
listen to....

There is a program that will switch between the modes (trunked and non
trunked) every 2 min and it also has other features that are nice (lets
you program the Pro-2052 from computer and operate it as well0

If I had noticed that this radio didn't have the ability to scan both
trunked and nontrunked systems and couldn't scan more than 1 bank of
trunked at a time I wouldn't have got it....prolly would have gotten one
of the hand helds that can (Pro 95, 96 or 97) and used it on my base
antenna.

I have read over the manual & it does not show anything about it. I have tried entering frequencies like it says but the buttons do not respond. Also does not show which banks to use, A,B,C,D have some frequencies on it & E is blank but wont let me add. When I press 1 for instance to start a frequency it changes it to another bank in the bank from lets say A2 to A1. Really confusing compared to Radio Shack.

Depending on your location, and requirements. The PRO-2052 will not receive the newer APCO-25 digital modes that many public safety departments are switching to. It's also on the list of scanners that will be adversely effected once rebanding of the 800MHz trunked systems takes place. This may, or may not be an issue, depending on your location, and the system's frequencies.

It is one of the few scanners on the market that is capable of receiving UHF Military Air, in the AM mode.

Man you need to break down and buy a GPS unit!
I run DeLorme's Streat Atlas in an old junker 486 laptop.
It is handy for driving, storm spotting and for keeping up
with the action on the scanner. At max resolution, you have
to go over 100MPH before you can outdrive the map update.

A friend with a restored 280Z was very happy to help me test it.
At 105MPH I was screaming "Stop for God's sake stop!"

And yes, I know the quote is from Daniel Boone.

Here you go, Markie. This may help the rest of us get through your laborious third grade level posts.

ieSpell - A Spell Checker for Internet Explorer
Introduction
ieSpell is a free Internet Explorer browser extension that spell checks text input boxes on a webpage. It should come in particularly handy for users who do a lot of web-based text entry (e.g. web mails, forums, blogs, diaries). Even if your web application already includes spell checking functionality, you might still want to install this utility because it is definitely much faster than a server-side solution. Plus you get to store and use your personal word list across all your applications, instead of maintaining separate ones on each application.

Kenwood RZ-1.
Wide Band Receiver. Traditional "DIN" style unit may be easily installed in the dash of your car providing inconspicuous operation. People will never know you have monitoring and eavesdropping capabilities. Unit has been used indoors for scanning bands and is mounted on rubber feet which may be removed. Receiver is in excellant condition with owners manual.

The Kenwood RZ-1 tunes from 500 kHz to 905 MHz. Modes of reception are AM, FM and FM-W with tuning steps at 5, 12.5, 20 and 25 kHz. This incredibly wide frequency coverage includes almost everything. Enjoy AM broadcast band and complete shortwave coverage as well as VHF and UHF public service bands. It can even pick up TV broadcast audio, cell phones, baby monitors, cordless phones, etc. One hundred memories are available with 7 character alpha-tagging to label the stations you have stored. The numeric keys let you recall memories or directly enter the desired frequency. VFO and memory scanning are both supported. There is even a NTSC video output jack for TV video reception with an external monitor (not supplied). Other output jacks include: Left and Right Line Output and external speaker.

>at 40 MHz.
>

Whereas there's no gain involved with a 1/4 wave vertical per se
(unless referenced to a crap antenna like that on ebay), the 1/4 wave
vertical is "spot on" as Dale mentions. It'll also be resonant on
your desired reception freq. which does matter a lot with unbalanced
systems like that.

>The above EBay antenna (even if it were set up for VHF Low, which it does
>not appear to be) would be a real compromise in gain and BW.
>
>Dale W4OP

Dale's spot on here as well. When you sacrifice proper antenna length
(still speaking of unbalanced verticals) with tuning networks, you're
going to get a performance hit that is often not worth the trouble or
money.

Hey Al,

I did, indeed, have the banks and channels marked as trunking but it wasn't work. We may be able to chalk it up to lackluster reception strength on the trunking system I was trying to receive whle down in Oregon. Though, admittingly, I believe I didn't have everything program in properly. I finally figured out the basic steps of programming in the data channel for Motorola Systems and then manually entering in the Talk Group #'s and AlphaNumeric tags. The manual could have been quite a bit more insightful and less ambiguous and confusing. I finally googled my way to a couple of sights with some good, basic facts that pushed me forward much quickly than the manual would ever do.

Hi

Have one of these with a problem. When you turn it on, crackling
sound
emits from the spkr. Previously I could remove the batteries and the
radio
would work agian. Now it doesn't. Turning the squelch doen't seem to
matter at all. Volume works and you can hit the 'scan' button which
will
change the freq.

Somebody seen this? Repair instructions avail or pointers?

thanks

Since Motorola hasn't yet finalized their modifications to the systems in question, no one can make a definitive statement about which scanners will survive and which won't with any degree of certanty. At this time it's still all guesswork.

Source record: 11008

Don't know how I missed this thread, but....

At home, local PD and FD's for several communities around me, California Highway Patrol, the local airport. Then there's the itinerant channels, FRS, MURS, (ahem), some of the older cordless phone freqs (just to make sure the scanners work in the VHF freqs, of course <g>), also some of the aeronautical freqs that pass over me.

On the road, when on a trip up to the state of Washington, (I have a dedicated scanner), CHP, OSP, WSP, the various DOT's and general county channels (Sheriff, County Fire, some local stuff, and areo's.) In some cases, it's saved me from some tickets. I tend to drive with a lead foot <g>.

Another dedicated scanner (both Pro-2042's), is dedicated for day trips to the coastal region of California. It has CHP, Marine, State and National Park freqs (a bank for each) and then a separate banks for local frequencies of each county from Sonoma down to Monterey, Seven counties in all.

Also scan Ham and CB in the search banks, as well as news freqs. Plus what ever else may strike my fancy at the time.

Now if there were some way to program my 3 2042's with the computer.....Oh well

Eric

K1MAN ESSAY - ES051202 -

Blood is Thicker Than Water

America is all of us. If you come from another country and/or another culture, you are welcome by me as we offer you citizenship and the protections of our precious Constitution. Those of us who were born here, however, are willing, by definition, to die in the protection of our precious birth land and our precious Constitution.

Even though America is all of us, and it is, we will not allow you to do some quite important things such as being our President if you were not born here. There is a damn good reason for this. If push comes to shove, we are afraid you might "cut and run." I say "might." We simply don't want to take this chance, however slight it may be.

In that sense, therefore, those who are not born in America are "second class" Americans.

Same deal in Maine. If you were not born in Maine, you are not a Mainer. I "deal" with that. Mainers do cut me SOME slack, however, since I have been a citizen of Maine for 48 years. SOME slack, not very much. That is just how it is, blood is thicker than water.

America is predominantly Christian, and we do, indeed, have a national Christmas tree. That is just how it is, blood is thicker than water. In this case, we are remembering the holy birth of Jesus and the blood many of us believe he shed for all of us. That is just how it is, blood is thicker than water.

English is the predominant language in America. Some day there well might be more Spanish speaking Americans born here than English speaking Americans born here. There might well be more "African Americans" born here that "whites" born here. Hey man, this is America; I just love being American!

When the first human, an American, set foot on the moon, a Russian said to an American:

"It must be great to be an American tonight!"

No, "Ivan:"

"It is great to be an American EVERY night!"

That is just how it is, blood is thicker than water.

If America is threatened or if our Constitution is threatened, you had better watch out! I will STAND UP and fight, and if I need help, I will choose a "kid" born in America, educated in America, who played sports in America, and who was trained by the U.S Marines, U.S Army, U.S. Navy, U.S Air Force, the U.S. Military Academy, our Air Force Academy, Annapolis, etc., etc., over someone else who might just "cut and run" when push comes to shove, as happened in WWII and countless other situations that have cropped up over our brief 200 year history.

If your native country got "raped" during WWII, YOU are the ones who that let it happen, and those kids mentioned above are the ones who came over to "bail out" your collective asses. The "goose step" did not frighten those kids very much. Americans don't know the total humiliation of being "raped." We have NO FEAR of someone coming in the middle of the night to take one of us away. Our Constitution specifically allows us to have guns for just such an occasion if such ever occurred, however unlikely. Many Americans have more "fire power" than the so called "professionals." That is just how it is, blood is thicker than water. Be careful! Don't count America out yet! That is just how it is, blood is thicker than water.

May God bless you and your family during this holy season.

73 and GL de K1MAN

Fortunately, there is a world outside America; even if most american citizens couldn't locate Canada or Mexico on a map.

ok, is it under warranty?

if you are in the uk i would contact w+s or martin lynch or WHY & ask about
if there is a factory reset routing which totally resets the beasty.
there will be one, but i can't dind it on the net.
unless the one you have tried is the only one?

what does it do on an external psu?

do you get anything at all rx'ed on it on say a very strong station or
nearby H/H

seems like a visit to a repair shop is in order.

mike

Does it go away if you turn the volume down?

If it does, the problem is between the squelch point in the audio and
the volume control (not much circuitry there). If it doesn't it's
between the volume control and the speaker.

That's not all we send.

New England runs mostly on hydroelectric power from Quebec. The Boston Globe
and New York Times is made
with Quebec paper.

In California, electricity has been sent from British Columbia as has
natrual gas.

American builders use high quality wood products from British Columbia and
Ontario.

Sacremento, Seattle, and many other large cities use Canadian made buses and
rapid transit systems.

The robotic arm aboard the NASA Space Shuttle is Canadian. In fact the
Apollo programme was built using Canadian
talent.

As for Europe, The Brits have given Americans The Beatles, Elton John, and
Boy George. Not to mention Rolls Royces and
Jaguars and real movie heroes such as James Bond. The French has given the
world culture and fine cuisine. Germany has given the world precision
instruments, top quality cameras, Beemers and Volkwagens. Italy has given
fine cars such as
Lambrogini, and fine art.

So what has the USA given the world lately? A bit of a headache caused by
George Dubya's patriotic flag waving and
telling the world the US is the best democracy there is. Which it isn't.

Over there in the UK -- sorry lads. We have to put up with this neighbour of ours to the south all the time. They're a bit of a handfull at times.

If you're familiar wih scanners, stop thinking bank/channel and think
system/group/channel. Until you can do that, programming (and even
using) a scanner with dynamic memory will be difficult.

4864. K1MAN Says ARRL Response To His W1AW Information Demand Not Satisfactory

Newsgroup: rec.radio.scanner
Date: 2005-12-07 22:03:58 UTC
From: netmanager2@yahoo.com
Message-ID: <1133993038.323503.4310@f14g2000cwb.googlegroups.com>
Source record: 11026
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.scanner,rec.radio.cb

DAVE SUMNER, K1ZZ, CEO OF ARRL, RESPONDS TO K1MAN's LETTER

December 2, 2005

Glenn A. Baxter
Long Point Lodge
Belgrade Lakes, Maine 04918

Dear Mr. Baxter:

This is in response to your email of December 1, 2005 inquiring about W1AW operating practices.

W1AW is unique in that it is the only station that operates in accordance with the provisions of 97.113(d) of the FCC rules. The rules require that the station schedule operations on at least six MF and HF amateur bands using reasonable measures to maximize coverage, and that a schedule of operating times be published at least 30 days in advance.

As W1AW trustee it is my policy that W1AW adhere to the FCC rules. The station operates in accordance with the published schedule. The W1AW trustee and control operators also take seriously our obligation under 97.101(b) to cooperate in selecting transmitting channels and in making the most effective use of amateur service frequencies. For example, we transmit two brief warning messages prior to the commencement of a scheduled transmission as a courtesy to operators who may be engaged in communications on the scheduled frequencies (Ed. comment: This practice was FIRST used by K1MAN), and we deliberately keep our voice bulletin transmissions brief and limited in number.

Sincerely,

(signed)
David Sumner, K1ZZ
Trustee, W1AW

K1MAN editorial comment:

In other words, 97.113(d) of the FCC rules allows W1AW to pay a control operator for a 40 hour work week (pecuniary interest) for doing exactly what K1MAN does without any pay whatsoever, and doing it infinitely better, thus drawing a $21,000 "fine." W1AW "dumps" on existing QSO's every day and K1MAN only when some moron like K3VR

parks there on frequency in order to be "dumped" on, a criminal violation by K3VR of the Goldwater Law. Sumner was a law school drop out and Hollingsworth was sick on the day they taught law at law school. Sumner's letter is a "get out of jail free" card for K1MAN, and Dave will certainly be called as a witess in court along with Hollingsworth. Both men are in alleged criminal violation of the Goldwater Law as well by failing to discourage interference with K1MAN amateur information bulletins:

It is an interesting snub that K1ZZ does not use the call K1MAN in his arrogant middle manager mental midget letter, Hi. Eat your heart out Dave, AARA, the American Amateur Radio Association, has more class than ARRL, the "national association for amateur radio." By the way, exactly what is a "radio relay league" anyway?

73 and GL de K1MAN.

See www.K1MAN.com

Dave Sumner, K1ZZ
ARRL Chief Executive Officer
American Radio Relay League
225 Main Street
Newington, Conn. 06111

1 December 2005

Dave,

What is W1AW's current policy with regard to its bulletins, and can you refer me to the ARRL Board minute which established this policy? Specifically, does W1AW listen and/or QRZ each published scheduled frequency before transmitting? If the frequency is busy, does W1AW QSY, delay, or even terminate the scheduled bulletin?

The policy published in QST that I have found is to stick to the published schedule regardless of whether the frequency is busy or not, just as is the policy of K1MAN for information bulletins, which is also consistent with many years of W1AW operating practice as well.

You will remember that K1MAN was "fined" in 1990 with regard to this policy, and my appeal of these "fines" to the full Commission was "deep sixed" and thus blocking my further appeals to the D.C. Court of Appeals and the United Stated Supreme Court. Also, these "fines" were never litigated in Federal District Court here in Maine, and my subsequent civil suit to resolve this matter in Federal District Court against the FCC was dismissed. My related civil suit in Federal District Court against ARRL was also dismissed. My many attempts to resolve this matter have thus been repeatedly thwarted. K1MAN was then "fined" again regarding this same policy in April of 2005, a full fifteen years after the original FCC action, thus creating a further legal nightmare for the Commission, of course.

I am a member of ARRL. Thank you for your attention to this request.

Best personal regards. 73.

DAVE SUMNER, K1ZZ, CEO OF ARRL, RESPONDS TO K1MAN's LETTER

December 2, 2005

Glenn A. Baxter
Long Point Lodge
Belgrade Lakes, Maine 04918

Dear Mr. Baxter:

This is in response to your email of December 1, 2005 inquiring about W1AW operating practices.

W1AW is unique in that it is the only station that operates in accordance with the provisions of 97.113(d) of the FCC rules. The rules require that the station schedule operations on at least six MF and HF amateur bands using reasonable measures to maximize coverage, and that a schedule of operating times be published at least 30 days in advance.

As W1AW trustee it is my policy that W1AW adhere to the FCC rules. The station operates in accordance with the published schedule. The W1AW trustee and control operators also take seriously our obligation under 97.101(b) to cooperate in selecting transmitting channels and in making the most effective use of amateur service frequencies. For example, we transmit two brief warning messages prior to the commencement of a scheduled transmission as a courtesy to operators who may be engaged in communications on the scheduled frequencies (Ed. comment: This practice was FIRST used by K1MAN), and we deliberately keep our voice bulletin transmissions brief and limited in number.

Sincerely,

(signed)
David Sumner, K1ZZ
Trustee, W1AW

K1MAN editorial comment:

In other words, 97.113(d) of the FCC rules allows W1AW to pay a control operator for a 40 hour work week (pecuniary interest) for doing exactly what K1MAN does without any pay whatsoever, and doing it infinitely better, thus drawing a $21,000 "fine." W1AW "dumps" on existing QSO's every day and K1MAN only when some moron like K3VR

parks there on frequency in order to be "dumped" on, a criminal violation by K3VR of the Goldwater Law. Sumner was a law school drop out and Hollingsworth was sick on the day they taught law at law school. Sumner's letter is a "get out of jail free" card for K1MAN, and Dave will certainly be called as a witess in court along with Hollingsworth. Both men are in alleged criminal violation of the Goldwater Law as well by failing to discourage interference with K1MAN amateur information bulletins:

It is an interesting snub that K1ZZ does not use the call K1MAN in his arrogant middle manager mental midget letter, Hi. Eat your heart out Dave, AARA, the American Amateur Radio Association, has more class than ARRL, the "national association for amateur radio." By the way, exactly what is a "radio relay league" anyway?

73 and GL de K1MAN.

Sit behind the wheel. Reach out toward the dash with your right hand.
Wherever you can touch without stretching uncomfortably is a good
place for the mic. Youy should be able to see the speaker grill
(obstructions to sight also obstruct sound).

> What would be the best looking antenna configuration.

You want the best looking one, or one that works best? Remember, the
trunk lid is about 5db down from the roof, so use the trunk if you
want the loss, the roof if you don't. Or use a Larsen 5/8 on-glass if
you want something that works and doesn't leave holes in the car.

I need to connect two radios to my new notebook which has no serial ports, rigs are Icom R75 SW rcvr and RS Pro 75 scanner.

Link above is to a $65 CardBus card with 2 serial ports. Any thoughts if this type of interface might be more compatible to various serial devices than a USB/serial adaptor?

Thanks for any advice...

I have used the Socket serial port adaptors in my laptops for years and
they work great. They even work with DOS applications such as Trunker.
See http://www.socketcom.com/product/serial.asp for details on them.

They seem to be more compatible with DOS or DOS based applications than
built-in serial ports, probably more to the drivers than anything else.

The card you linked to seems like it should work, I have never used that
one though.

Reply | Reply to Author | Forward | Print | Individual Message | Show original | Remove | Report Abuse

Hi All

does anyone know of a Virtual Control Pannel For ICOM IC-R5 or a way to get my scanner sound through to my pc to

i have the scanner and the conecting cable and it all works with the cloning software but i need to make it easy to scan and edit freq and save

also are there any files out there i can literally drag and drop onto my cloning software to say auto add all air frequencies in uk ets

cheers

>Windows 98SE

Uniden's software has known problems with 98. (Actually, Win 98 has
problems, and Uniden's software pushes 98 hard enough to uncover
them.) Failure to install isn't one of the problems, but if you
could install it, you'd have problems anyway, so it's really a moot
point.

I don't know about software, but to get the audio into your computer,
just get a mono 3.5mm-3.5mm cable, plug one end into the earphone jack
of the receiver and the other into the line input (or mic input if you
don't have a line input) jack of the computer's sound card.

For a receiver besides scanning to listen mainly to shortwave which would be better the Icom R-20 or the Alinco DJ-X2000. Again I would be using it for a portable shortwave receiver more then a radio scanner. I use my Radio Shacks for scanning including trunk tracking.

My apologizes for confusing a HD serial ATA port with a RS-232 port :*(. So, to now post more sensibly I will quote Bob Sillett who created the freeware SWLog (logging/radio control for HF rcvrs) recommends as follows in his FAQ:

" It is getting more and more difficult to find a computer with a real serial port. Many times a USB-to-Serial adapter needs to be used. If you currently have a USB-to-Serial adapter and it works for you, great! But if you are looking for an adapter, we recommend the IOgear GUC232A adapter. This adapter works very well and it also fully works with the Sysinternals Portmon serial monitor tool, which is a great tool for troubleshooting. Plus the IOgear adapter is only $25 or so and, as of Winter 2005, can be found in pretty much every Wal-Mart."

Incidentally Sillett's page is:

http://www.shortwavelog.com/default-english.html

Source record: 10870

I updated this file today.

I keep this file at www.yahoogroups.com/group/sonofrcma

Peter S

file created 17 Aug 2004

Official Websites that list their Radio Frequencies

Los Angeles City FD

Los Angeles County CA FD

Boulder County CO -
http://www.co.boulder.co.us/sheriff/com/live_radio.htm - 17 Aug 2004
(have a online scanner feed also)

Philadelphia PA PD did have their 453 Mhz freqs online in ?2003?

Las Vegas NV PD - ?had freqs online in ?2003? - ?lvmpd.com or lvpd.com?

- 11 Oct 2004 - Source:
www.co.st-johns.fl.us/const-officers/sheriff/radio.htm
- they have a live scanner online ; and they list the channels and
areas - but not the freqs

[01 Nov 2004 - WHY IS THE ST JOHN FL INFO MERGED WITH THE LAS VEGAS PD
INFO? - ps]

FD in suburban Philly - ?in delaware County or Montgomery County -
listed all sorts of freqs - and gor in trouble a little bit - ?2003?

At least one city or county even listed some talkgroups - who was that?

- Portland OR maybe? - maybe Washington County OR?

Charlottesville VA FD and EMS - list freqs and has live scaner feed

Florida Highway Patrol - 03 Sept 2004 - they dont list freqs
apparently, but they do list dispatch codes and traffic signals - plus
they have online realtime listings of accidents

11 Oct 2004 -
http://www.srvfpd.dst.ca.us/organization/communications.htm - online
CAD + online live scanner feeds + freqs + photos - San Ramon Valley FD
in Contra Costa County in California

16 Oct 2004 - Palmer MA FD 159.?435 - ?Washington Fire District NY Long
Island 46Mhz and 153 mhz

18 Oct 2004 - www.pewaukeefire.com in Wisconsin lists freqs -
www.fleetwoodfire.com in Berks County PA lists freqs and has a
online scanner - www.station60.com in Laurel Springs NJ lists freqs

01 Oct 2004 - Cambridge MA FD lists 154.355 854.4875 852.2625 - New
Haven CT FD lists radio freqs, radio IDs, and Signal codes - Cambridge
FD also has a complete detailed roster of all rigs

21 Nov 2004 - Pittsylvania County VA 911 has freqs and scanner feed

17 Dec 2004 - Plymouth County Sheriff in MA - website lists all police
and fire freqs in the county - (?info is all gone - July 2005?)

23 Dec 2004 - Surry NH PD - 155.07 - codes - callsigns

18 Jan 2005 - Lexington MA FD + Peterboro NH FD
+ www.santamonicafire.org in CA
+ Port Washington FD in NY www.pwfd.com (?listed above?)

29 Jan 2005 - Wildwood Crest VFD in NJ -
http://www.crestfire.com/mainpage.htm - see county listings for the
info

---

29 Jan 2005 - Ocean City Maryland -
http://www.ocvfc.com/communications.htm

The Ocean City Public Safety Communications Center handles all
emergency calls for service for the Ocean City Volunteer Fire Company.
www.ocemergency.com
Located at 65th St and Coastal Hwy on the bayside, the Enhanced 911
center operates an M/A Com Wireless (Formerly Com-Net Ericsson/GE)
trunked 800 MHz analog and digital EDACS (Enhanced Digital Access
Communications Systems) radio system.

We are alerted through Motorola Minitor III VHF 2 channel voice pagers,
portable and mobile EDACS radios. We use the M-RK I, M-RK II Scan,
LPE-200, and MDX radios.

Several members of the Ocean City Volunteer Fire Company are also fire
dispatchers for the communications center which provides great
communication between the organizations.

Simulcast Frequencies:

158.895 Fire Dispatch (Channel 1)
154.085 Fire Ops 2 (Channel 2)
154.025 Trooper (Channel 5)
157.150 Coast Guard (Channel 6)
046.380 Worcester (Channel 7)
453.225 Sussex (Channel 11)

Trunked EDACS Frequencies:

859.9875 853.9625 855.2375 860.9875 856.7375 857.7375
858.7375 859.7375 860.7375 856.2375 857.2375

Copyright 1998-2004 Ocean City Volunteer Fire Company Inc. All rights
reserved

CT - Monroe VFD - 45.08 Dispatch - 458.7875 fireground
- per the front page of their website - 02 April 2005

CA - I think that Kern County lists their radio freqs also
- 02 April 2005 - yes correct I saw the info there the other day
- the old freqs - 5 May 2005

---

5 May 2005 update

There are many official public safety websites across the USA that list
their radio frequencies. Here are a few more that I have come across.

Gaston County North Carolina
http://www.co.gaston.nc.us/gaston911/scanner.html

, Garden City GA FD http://www.garden-city-fire-dept.org/page3.htm ,

Central Jackson MO FD http://www.cjcfpd.org/freq.htm ,

Buckeye Arizona FD http://www.buckeyeaz.gov/fire/Dispatch.htm ,

Elsmere NY FD http://www.elsmerefire.org/html/radio.shtml ,

Amarillo Texas http://www.ci.amarillo.tx.us/departments/dem/radio.htm
(this list will be going into Scanning USA magazine)

Lakes region NH Fire lists their freqs - and I think that SWNH Fire
dispatch lists their freqs also

July 2005 - Northampton County PA 911 and Carbon County PA
911 both list their freqs (Carbon County even lists the
police freqs)

July 22, 2005 - Staunton VA Rescue Squad website lists lots of freqs -
police, fire, and EMS - www.rescue5.com

July 25, 2005 - here are more agencies that list their radio freqs on
their websites - www.lrfr.org Lane oregon FD - www.longviewfire.org
Longview NC - www.cantonfire.org Pennsylvania -
http://members.aol.com/lmtnrescue/squad4.html Little mtn Rescue in
Newberry County SC - Boone County Missouri FD has a media guide online

with all the freqs, rigs, stations, terminology, etc

July 26 2005 - we can add www.mitchell911.com Mitchell Co NC - www.co.stanly.nc.us/Departments/011 Stanly Co NC - www.sheriff.co.wise.tx.us/scanner.htm Wise Co TX - Mountain Grove MO FD - Aspen Colorado 911 (good info - includes channel names and uses)

---

29 July 2005 - Wake County NC has a extensive document for scannerists on their website - it lists freqs and talkgroups - and tells you what scanners are available, how much they costs, and where to buy them. Shortcut to: http://www.wakegov.com/NR/rdonlyres/0B967E90-52F4-4DA8-86F4-EFB5FDCB79B9/7744/PS800MHzScannerGuide04.pdf

---

31 July 2005 - www.wlfd.com - Windsor Locks CT FD - has scanner feed with list of freqs - also has a seperate page with a list of freqs - police, fire, amb, buses, dpw, etc - I think they used to have a SOP online with more freqs and channels - Dec 2005 - the SOP is still online and it still shows lots of freqs

---

04 Aug 2005 - Montgomery County PA - the county website lists ALL of the county radio freqs (800 and other) - they also list (all) of the talkgroups for the TRS - maybe they leave out secret freqs and TGs (undercover or SWAT)

---

12 Aug 2005 - Golder Ranch AZ FD website has their radio channels, freqs, usage - and radio ID series for various FDs

12 Aug 2005 - Bushnell's Basin FD NY website lists freqs, rigs numbers, channels, primary and secondary channel usage procedure

---

14 Oct 2005 - http://www.ci.mesa.az.us/police/communications/technology.asp (click the links on the left for freqs and codes)

---

20 Nov 2005 - add Valley Shore CT 911 + Cambria County PA (with link to Dan Ruhe's scanner website) (PD and FD freqs) + Brooktrail CA FD + Champaign IL area (?metcad) (PD and FD freqs)

Lancaster County Pennsylvania - Dec 2005 - has tons of freqs and radio SOPs - they also have minutes of high level meetings - OpenSky sites are still being built

Hackensack NJ FD lists freqs on their website - Dec 2005

Fort Detrick MD FD lists their freq at 153.845 - Dec 2005

Garret County Maryland lists their freqs - Dec 2005

Hyattsville VFD in Maryland lists their freqs on their website - Dec 2005

Prince Georges County MD FD website had a info message in Nov 2005 listing their new freqs

There are some US military documents online that list radio freqs for firing ranges - Dec 2005

==========

Both Grove and Universal sell it. Accurate but a little more of a European focus as to what can be heard. Been around with yearly for more than 20 years.

4916. Anyone have an old database to help me look up an expired call sign? KU5588

Newsgroup: rec.radio.scanner
Date: 2005-12-11 13:11:36 UTC

I'm trying to find an expired call sign. If anyone has an old FCC database, I'd appreciate someone looking up the call sign KU5588.

This call sign is accessing a local GMRS repeater. I assume the person's license is expired. If so, they no longer have GMRS operating priveleges and need reported to the FCC for violations.

I tried a google search for the call sign and came up with nothing.
Then I tried the call sign for my old CB FCC call sign. Still nothing.
Then, I put in an obscure call sign. Its a call sign for a micro-wave,
studio to transmitter link for a commercial station. Wallaaa! Tons
of information.

That doesn't mean that KU5588 doesn't exist, just that google can't
find it. But all the obscure call signs I put in that I know are good,
google found them. Maybe a co-winkidink.

4918. scanner crystal swap

I have some unneeded scanner crystals I would like to swap for some
I need.

Here's the crystals I have:
(IF = 10.7 (Realistic)

453.100
453.450
453.600
453.775
453.975
460.350 (2 of them)
154.310
155.341
155.280

Looking for:
(with IF = 10.7 for Realistic)

146.520
162.550
for starters . . .

What have you?

Bill

I've tried 6 ways to sunday too. I'll probably just send in a complaint to
the FCC with what I have, and if they can fill in the blanks, then good.
Otherwise I'll just have to let it go.

Even if you located information on who was licensed as KU5588, that doesn't mean they couldn't have sold the equipment to someone else. It could have easily passed through several hands by now.

Expect to be underwhelmed with an FCC response.

My suggestion would be to change PL or possibly to DPL.

They could have made up the call or the system may have had a sticker or marking on it with that call sign that was never taken off and the current users just thought they could assume that call.

Are they aware of your presence on the frequency. IOW, when you say something will there conversation indicate they heard what you said?

They may have PL or DPL on their system and have no idea you are on the frequency.

Listen to their conversations and take notes. Often times, they will reveal information about themselves such as phone numbers, names, locations, etc.

John;
Send me an e-ail with the frequency and the City. I have the PRSG red national repeater guide from1997. If the call is in there I will let you know. By the way, I think something is wrong with the number. Usually they are like KU/_X_/5588. X being a missing letter in the prefix.
You could also ask the PRSG (google his website) if he has old records of callsigns. I bet he does.

4924. judge recognizes cell phones and radios as same thing. in effect, outlaws using all mobile transcievers in the U.S.

Newsgroup: rec.radio.scanner
Date: 2005-12-12 00:25:32 UTC
From: scammedbyohio@wmconnect.com
Message-ID: <1134347132.848281.232190@g47g2000cwa.googlegroups.com>
Source record: 10886

think the ECPA contradicts itself in several places, but that subject is for another post.

As for this post, all of you who wanted the government to recognize cell phone transmissions and radio transmissions as the same thing (and that includes me, so no offense meant to you all) have finally gotten their wish which proves the old saying

"Be careful what you wish for. It just might come true."

A judge has finally recognized cell phone transmissions and radio transmissions as the same thing and in so doing effectively ruled that all mobile radio transcievers are now against the law in the U.S.

And it seems that the federal law that says it takees precedence over all local and state laws contrary to using a ham radio while mobile, and exempts all hams from any local or state laws against using a mobile ham radio while mobile, didn't do any good either,and didn't protect the ham, as the ham operator was still ruled guilty by the judge. It seems it didn't protect him from anything.

Here's the story: A ham radio operator was talking on his mobile ham radio rig while mobile, so a cop pulled him over under the cell phone law for using his "cell phone" while driving. (since to use the radio, the ham had to have one hand on the microphone instead of both hands on the steering wheel).

The ham fought it in court, and the radio was described exactly to the judge.

After hearing about how the radio actually was, the judge ruled that a mobile ham radio is still similar enough to a cell phone that it's against the law to use one while driving and that as such, the ham is indeed still guilty.

Now, since the judge ruled that, and mobile transcievers are the same way, you have to have one hand on the microphone instead of both hands on the steering wheel, the judge's ruling, in effect, also outlaws using all mobile CB radio transcievers in the U.S.

So why doesn't the cop who pulled the ham over, and the judge, go after the FCC for illegally ruling and passing illegal radios as completely legal for the public to use in the U.S.?

Or after the manufacturers for fraudently selling illegal radios to consumers as legal to use in the U.S.

or after the FCC for fraudently and illegally approving these illegal radios to fraudently be sold as legal for thre public to use in the U.S.?

(Yet the same cop who pulled the ham over is probably allowed to use the same type of radio. one with a hand-hed microphone).

Here's the source of the story:

Source: This Week in Amateur Radio
Categories: Amateur Radio News

17:45

Ham Operator ticketed for using his ''cell phone''

Joey Hernandez, W2JLH, was issued a citation for operating his amateur radio while mobile. He went to court where the judge presiding had to consult a law book regarding the issue, and when the radio was described to him, he pronounced a guilty verdict to Mr. Hernandez, saying that the description of the use of the radio was too similar to the use of a cell phone and therefore he was guilty as charged. More on

this issue can be found at the linked URL.

Have you tried 155.0250 ?

Anyway, keep plugging away w/ google. You're probably just not typing
in the right search queries.

I found these sites with some Puget Sound PD freqs.

http://www.totse.com/en/media/radio_scanner_frequency_lists/freq.html
http://www.northwestradio.com/interceptnw/scpd.htm
http://www.textfiles.com/hamradio/FREQUENCIES/pugetsnd.ham

Found this too:

Edmonds, Lynnwood, Mountlake Terrace, Woodway, Brier
These cities are dispatched by "SnoCom".
Tac-1: 155.025 (127.3) Main dispatch
Tac-2: 155.820 (127.3) Car-car
Tac-3: 155.145 (127.3) Lynnwood dispatch (nights/weekends)
Tac-4: 155.370 LERN
Tac-5: 158.925 (127.3) Edmonds city freq, used by Edmonds for
car-car sometimes.
Tac-14: 155.475 NLEEC used by Brier for car-car sometimes
Tac-?: 156.135 OSCCR past use by Mountlake Terrace for
car-car
and by Edmonds narcotics units.

'Edward' units = Edmonds
'Lincoln' units = Lynnwood
'Tom' units = Mountlake Terrace

A lot of fuss was made of this on eHam or something, big screaming headline about Ham Radio now being illegal.

It isn't illegal, Hams just need to be smarter. A law preventing the use of any hand microphone was passed many years ago in the state of Victoria. VK3's simply use boom mics or headset mics.

A similar law exists in VK1, where I was told to make sure I was not being obvious with the use of my hand mic, if there was a police car in the vicinity.

Brad VK2QQ

It's not rocket science.

1) The law in NY *specifically states* that the device in question be connected to the public switched telephone network. The ruling is appealable on that ground alone.

""Wireless telephone service" shall mean two-way real time voice telecommunications service that is interconnected to a public switched telephone network and is provided by a commercial mobile radio service, as such term is defined by 47 C.F.R. S 20.3."

Most hams operate simplex, even when using a phone patch, so the law doesn't apply, as written. (New York law requires pleas and convictions on summonses *as written*, not as someone wants things to be. "The law doesn't say exactly what it has to say for the ticket you wrote to be upheld? Tough. Next time, write it properly." - me, to a cop who complained to me, his boss, about a ticket that got thrown out.)

2) The law in NY *specifically states* that the device in question be held to tone's ear. He held it to his mouth?. Appealable on that ground alone.

"'Using' shall mean holding a mobile telephone to, or in the immediate proximity of, the user's ear. "

Pretty stupid, holding a mic to your ear. "There better be music coming out of that thing."

Try these:

"'Engage in a call' shall mean talking into or listening on a hand-held mobile telephone ..."

"(a) Except as otherwise provided in this section, no person shall operate a motor vehicle upon a public highway while using a mobile telephone to engage in a call while such vehicle is in motion. (b) An operator of a motor vehicle who holds a mobile telephone to, or in the immediate proximity of his or her ear while such vehicle is in motion is presumed to be engaging in a call within the meaning of this section. The presumption established by this subdivision is rebuttable by evidence tending to show that the operator was not engaged in a call."

It doesn't seem as if either the spirit or the letter of the law were violated. It seems that an overly-inflated ego decided to throw his pork around.

Traffic tickets in NY are adjudicated by an administrative adjudication office, and the officiating person is a hearing officer, not a judge. Such rulings aren't even precedential in the office in which they were issued. A hearing officer can contradict his ruling in his very next ruling, and the fact that he just ruled the opposite isn't relevant.

I hope the guy appeals the case. It won't look too good for the hearing officer when the DA decides to not fight it.

Find the system you want to program at
http://www.radioreference.com/modules.php?name=RR and post the url
here. Someone will probably help you. (Not all systems need base,
spacing and offset.)

Al, was this guy using a speaker mic?

I'm just wondering because I read that the Judge said he was holding it to his ear like a cellphone, and a speakermic would do that, creating a loophole for the judge to uphold the charge.

I can't help wondering if the Ham had a bad attitude as well. Police will dig their heels in if dared or badmouthed, and from what I've seen from most American newsgroups, Americans aren't shy about coming forward with abuse.

It wouldn't matter unless he was also on an autopatch and running
duplex.

>I'm just wondering because I read that the Judge said he was holding it
>to his ear like a cellphone, and a speakermic would do that, creating a
>loophole for the judge to uphold the charge.

Nope - ALL parts of the law have to be met - it's an "and" construct,
not an "or" construct.

>I can't help wondering if the Ham had a bad attitude as well.

A bad one, or he simply didn't know how to fight it. I can't tell you
the number of people I've seen come up before a hearing officer with a
ticket that was invalid on its face, and end up being found guilty.

> Police will dig their heels in if dared or badmouthed, and from what I've seen
>from most American newsgroups, Americans aren't shy about coming
>forward with abuse.

I always tell people, when the subject comes up, to accept the ticket
without a word, unless it starts off as a friendly "confrontation", in
which case you might try joking your way out of it. If the cop is
determined to write you, he will. There's only one way to prevent
that - and your badge has to outrank his to do it. Take the ticket
and fight it in court/AAB.

Not cell - no scanner can decode TDMA or CDMA. Trunking, cordless and
digital? Pro-96, 3096 or Uniden BCD396T. Trunking and cordless?
Almost any trunking scanner, depending on the trunking system.

I have had no success in figuring our part of the software included with my scanner.

For instance in the database window: Window|Reference Database.... I can't get it to do a thing. Does it? If so, how do you get it to do anything?

Second, I can't make it import .csv files.

Third, most of the time, I can't get it to paste anything into the database...I got it to work once and can't duplicate whatever I did.

THEN - I was wondering about the purchased software (key). Has anybody bought it? Does it work ok?

K1MAN BULLETIN - 051216A -

W1AW AND K1MAN JOIN FORCES

Dateline - Belgrade Lakes, Maine - 16 December 2005

W1AW/4 came up on 14.275 MHz. yesterday, 15 December 2005, calling CQ for their special event station from the ARRL Christmas toy drive national distribution center in Memphis, Tennessee. K1MAN answered, and Chief Operator Darryl was called to the W1AW mic. The two stations had a short QSO with Darryl explaining the toy drive project in detail. W1AW is the flagship station of ARRL, the American Radio Relay League (www.ARRL.org), and K1MAN is the flagship station of AARA, the American Amateur Radio Association (www.K1MAN.com). K1MAN wished W1AW well and then QSYed to 14.272 MHz. to kick of K1MAN's new live call-in talk show with co-hosts Glenn at K1MAN and Karol at VE7KFM on the "left coast" of Canada (Hi). K1MAN is on the United States "right coast" (Hi). The call in number is 1-800-262-9543.

The kick off "show" was a huge success as the ARRL toy drive 3 KHz up was heavily promoted by both Glenn and Karol. During this "show" on 14.272 MHz., ND8V, enabled by K4ZDH, QRMed W1AW off of 14.275 MHz., an alleged criminal act under the Goldwater Law, Sections 333 and 501 of the 1934 Communications Act. ND8V is under the assumption that the Goldwater Law has been repealed (it has not) since ARRL dropped their listing this law in their FCC Rule Book in the early 1990s, another alleged criminal act itself, under the Goldwater Law, since de-listing of Sections 333 and 501 does give that false impression, doesn't it?. K4ZDH is also in alleged criminal violation of the Goldwater Law, of course, since he has repeatedly failed to discourage interference by hams to the K1MAN Amateur Information Bulletin Service heard on 14.275 MHz. since 1987 and just resumed yesterday after going off the air for IARN (International Amateur Radio Network) emergency traffic reasons on 4 July 2005.

Their is a rampant rumor going around in amateur radio circles that ND8V has requested to share his federal jail cell at Leavenworth with K4ZDH, known to his friends at the Commission at "Rot Riley" Hollingsworth the "K1MAN Killer." According to Glenn Baxter, K1MAN, Executive Director of AARA, there are no provisions in United States law for "vanity jail cells." Dave Sumner, K1ZZ, CEO of ARRL could not be reached for comment on this question and did not return any phone calls almost certainly made from K1TP, W5YI, and other ham

radio reporters as this story broke on Thursday.

Glenn Baxter, K1MAN, said in an interview that:

"I certainly support waiving the rules in this case by allowing ND8V and K4ZDH to share jail cells after trial on purely humanitarian grounds. This, after all, is the holiday season, and radio amateurs should all pull together on this one and throw up, errr, throw their support for ND8V's behind, errr, throw their support BEHIND ND8V and K4ZDH." Ed. comment: Lay off the wine Glenn!

Chris Imlay, ARRL counsel, has advised, we believe, K1ZZ to invoke the Fifth Amendment since ARRL might also be criminally prosecuted in this case. Former Assistant U.S. Attorney Gail Fisk Malone is rumored to be considering a return to the Justice Department to personally handle this very high profile case. Gail, no doubt, has her eye on Hillery Clinton and the White House. Malone has neither confirmed nor denied that she is a presidential candidate nor that her running mate will be Wayne Green, W2NSD, who ran for Vice President at least once before. Wayne indicated to this reporter recently that he wants to reform education in the U.S., and, as Vice President, he would most certainly have his best chance to do this, in this reporter's opinion.

Glenn Baxter, K1MAN, has stated, again, that he IS NOT a candidate for President and that there WILL NOT be K1MAN Amateur Information Bulletins coming from the White House if he is:

"I am getting too old for politics, and my responsibilities at AARA and K1MAN are far to great at this time to even consider the White House. With Hollingsworth in jail, there would be no point. One FCC Commissioner will be as good as any other once we have put Rot Riley away," Mr. Baxter said.

Later in the day, W1AW and K1MAN re-established contact on 14.275 MHz. and were driven off the frequency by ND8V. Mr. Baxter stated:

"ND8V also drove me off of 14.275 MHz. while I was working G7BGY and 4Z4UN on December 14, 2005. There seems to be a pattern here. K3VR even E-mailed me yesterday that he has sent CD recordings of K1MAN to all FCC Commissioners. For the full text of little Brian's juvenile E-Mail see www.K1MAN.com, also attached below."

Today, in Washington, D.C., several FCC Commissioners were spotted walking around listening to Brian's MP3 recordings of K1MAN on their I-PODs, according to sources of questionable reliability, since all of the FCC is out on Christmas vacation and in Maine skiing with their kids now home from college.

"It is great that W1AW and K1MAN are working together now," Mr. Baxter said. "Tune in to the K1MAN live call-in talk show on 14.275 MHz.

plus or minus QRM, of course! Give us a call, even if it is only for a signal report or QSL request. Call 1-800-262-9543. The first show begins daily at about 11 A.M. EST, and the second program begins at about 2 P.M. EST. Join the fun!" 73 and GL de K1MAN

There are no scanners that receive Digital Cell or Cordless phones, the reception of which is still illegal.

There are lots of trunking scanners around.

Frequently while listening to fire or police calls, I hear that they are switching to Tact 6, Tact 8, etc.

How can the frequency of these channels be determined?

Thanks.....

The easiest way is to ask someone in your area that knows already. What state, city or whatever are you asking about? Have you tried the Radio Reference page? They may have what you want. The harder way is to use the "search" function on your scanner. Back when I first started listening to the Police here and did not think to use the net that's how I found all the channels here. It was a time consuming process. I had to laugh at myself later when I found out the info was just a few clicks away for free.

>Anybody faced this before?

To the program, a USB->serial converter *is* a serial port. I never heard of anyone writing code that talked directly to the driver - it's much easier to just write code that talks to the serial port and let the driver make up the difference.

Two caveats:

1) Make sure that you have the latest driver for your converter. Some converters work fine on older drivers - for just about every device except scanners.

2) Look in Device Manager to see what port number Windows assigned the converter (when the converter is connected, of course). Use that number in the program. Also be aware that if you move the converter to another USB port, Windows will find "a new device" and install it to a different port number. You can manually (in Device Manager) change the port numbers for "all" the converters on all your USB ports to the same serial port number, so your program doesn't have to be changed if you move the cable. (Credit Andy Porrett for that last one.)

If you know all this, ignore the post, but someone else may benefit from it.

Traffic tickets in NY can be heard in a local Criminal Court, i.e. a
Village or City Court (in actual fact, MY village has a traffic Court
with a real Village Justice and a RECORD (Court Reporter).
A ruling in that Court is not binding on anyone,as it is the lowest
Court in the State and NOT an appellate Court, however the ruling CAN
be cited by other Courts, at least until it is overturned on the
Apellate level.
So there you have it,
Traffic infractions are adjudicated by a hearing officer in NYC and
some other jurisdictions, but NOT all, AND.....
Some VTL matters are MISDEMEANORS, which can only be heard in Criminal
Court (such as scanner in the vehicle).

Hi Fryer,

I know, i am posting them fore a while now BUT....
After complaints from other users moved the posting to :
alt.binaties.e-books.flood
Latest are in there.

Also, i seem to have reached some kind of upload limit so
the uploading is spread more in time.

Still have some 2.5 Gb to go....

Will take requests in mentioned group or in one of the
scanner groups.

For the Seattle, Redmond area (King county) the listing of the talk groups found here: http://www.radioreference.com/modules.php?name=TRSDB&sid=604 should help you out.

It may not even be a frequency that they are switching too. It maybe a talkgroup if you are monitoring a trunked system.

Buy a frequency counter or a scanner with close call.

Hey Jay,

Again THANKS for the uploads you have done!!!! I've downloaded three so far. As to requests....Do you have service manuals as well?

BTW, one of the downloads was for the Sony 7600D. I bought that radio at a second hand store, 'bout 10 years ago for "$9.99 as is". (That was actually written on the freq readout in grease pencil.) Threw in all 6 AA's and it worked perfectly. Sort of learned most of it by experimentation and common sense. But you upload of the manual taught me a few new tricks for the 'D.

As a request, the Yaesu VR-500, AOR-8000, and Radio Shacks Pro-95, and for a friend the Pro-94, as well as the Pro-2042 and Pro-2006. Both owners and service if possible. THANKS again!!!

Eric

For Pro-94 and Pro-95 manuals, try
<http://marksscanners.bravehost.com/>. Mark rewrote a few manuals so
people with little or no experience can actually understand how to use
their scanners. They're single page, so it's easy to copy and paste
them into a Word doc if you want them available off line.

Seems as if you're not the only one who doesn't know which channels
are what frequencies/talkgroups:

<http://www.radioreference.com/modules.php?name=RR&ctid=2973>

It looks as if the police are on a conventional UHF system. Keep the
scanner on a search of 453 MHz to 454 MHz and see if you locate
frequencies they're using that aren't 453.575. (Many agencies that
have more than one repeater have them all in the same general
frequency area.) If you do, submit them to Radio Reference. Even
better will be if you hear someone being told to go to Tac3, and you
hear him come up on some other frequency. Then you'll know that
frequency is Tac3.

You might want to try 453.275.

Other frequencies licensed to the county are 153.92, 154.115, 155.055,
155.115, 155.16 and 158.88, but I they wouldn't be using them if their
equipment is on UHF.

I believe the card you linked to is for serial ATA hard drives NOT
RS-232 com ports. I use a Socket I/O card in an old Toshiba laptop to
provide a second comport. No problems. I paid around $30 shipped for a
used one on eBay. There are some listed now, new and used.
<http://computers.search.ebay.com/serial_PCMCIA-Cards-for-Laptops_W0QQcatrefZC6QQfromZR2QQ
frppZ50QQfsopZ1QQsacatZ42190QQsbrsrtZlQQsotrZ2>

My old laptop can't use cardbus cards so it was harder to find one
that would work.

By the way, Wall-Mart has a serial to USB converter which Robert Sillett of ShortWaveLog fame says he has found to be reliable and available all across America.

Quoting from his FAQ

"Q: Can I use a USB-to-serial port adapter?

A: It is getting more and more difficult to find a computer with a real serial port. Many times a USB-to-Serial adapter needs to be used. If you currently have a USB-to-Serial adapter and it works for you, great! But if you are looking for an adapter, we recommend the IOgear GUC232A adapter. This adapter works very well and it also fully works with the Sysinternals Portmon serial monitor tool, which is a great tool for troubleshooting. Plus the IOgear adapter is only $25 or so and, as of Winter 2005, can be found in pretty much every Wal-Mart."

Have you looked at the Radio Reference page? You could try Google also, but
RR probably has what you are after if some poster here does not know.

THE LIFE OF KAROL - 18 December 2005 - ES051218A - (draft)

by

Glenn Baxter, P.E., K1MAN
(written in the third person)

I have just finished word for word reading of The Life of Riley, including all footnotes, dated March, 2005. There are various and very serious defects in this otherwise very informative and basically correct document. Riley and ND8V need to go, but Karol feels that K1MAN will go instead. No so. K1MAN is too smart for Riley, ND8V, K3VR, AND Karol. K1MAN's weapon is the U.S. Constitution. For K1MAN this is child's play.

FIRST

The most serious fault regards the concept of "frequency ownership." The problem with Karol is that the Polish calling frequency on 14.273 MHz. came into conflict with K1MAN and IARN on 14.275 MHz. beginning in 1985 with IARN emergency operations and then in 1987 with K1MAN Amateur Information Bulletins. One main purpose of the information bulletins was to "establish" 14.275 MHz. as an emergency frequency so the contesters would not wipe out IARN emergency operations due to lack of knowledge. The Polish calling frequency on 14.273 MHz. is too close, and the logical thing to do would be to move to 14.272 MHz. or ask IARN (and the Bermuda Net, of course) to move to 14.276 MHz. Another idea would be to move the Polish calling frequency to 14.272.5 MHz. and ask IARN (and the Bermuda Net, of course) to move to 14.275.5 MHz.

I do remember some discussions with representatives from the Polish group, and their position seemed to be "We will not move, you move..." or something to that effect.

Now, the FCC rule of using the spectrum most efficiently kicks in. If IARN moved to 14.276 MHz., there would still be a problem with the Bermuda Net who opted to have K1MAN's license revoked with the eager assistance of ARRL instead of moving themselves or working out a mutually acceptable schedule. Etc. K1MAN has always tried to negotiate in good faith in order to be within the FCC rule of cooperating with respect to selection of frequency. It is hard for a bona fide bulletin station or a bona fide emergency organization with substantial track record (such as IARN) to come up short in such negotiations.

The smart thing for the Polish to do would be to slide down to 14.272 MHz. When K1MAN took two years off (to teach) from 14.725 MHz., ND8V and associates jumped from the "zoo" on 13.313 MHz. onto the 12 year K1MAN established 14.275 MHz., and the turf war began. Sorry, but ND8V was right. 14.273 MHz. IS too close to the more heavily occupied 14.275 MHz. (by more than one group). The Polish were outnumbered, and common sense still called for the Polish to slide down.

Recently, Karol tried to slide K1MAN to 14.274 MHz., just occupied nearby by ND8V on 14.273 MHz. ND8V was wrong to be on 14.273 MHz. (just as the Polish are wrong to be on 14.273 MHz.), and K1MAN would be wrong to slide to 14.274 MHz. Two wrongs don't make a right, and Karol should realize that such poor practive by K1MAN could easily be translated (in the current K1MAN/FCC legal environment) to criminal proseedings against K1MAN by "Rot Riley" Hollingsworth, FCC Special Counsel. Was Karol also sick on the day they taught law at law school?

The "Life of Riley" asks Hollingsworth to get into a juvenile frequency dispute turf battle which "Rot Riley" played to the hilt with his campaign against K1MAN (with IARN, AARA, and information bulletins barley mentioned at all by Karol - what's with that?). Sure, Riley is corrupt, and sure, ND8V is "enabled" by Riley to break the law, Mike's reward for his cooperation to nab K1MAN. Same deal was implemented with KV4FZ. Then KV4FZ was dumped into the fire (with WB2OTK and K1MAN, almost!) just as ND8FZ will be dumped into the fire with K1MAN is Riley has his way; he won't.

Karol mixes his issues and the net result is his Polish friends are involved with something that could have been avoided years ago by sliding down to 14.272 MHz. where his war with bigot ND8V could be easily won, hands down.

SECOND

Karol is very "anti American," it seems. He has stated to me that he does not care about the U.S. Constitution, something I would gladly die to protect. (Blood is thicker than water!) Bad image for Karol if he want to constructively and therefore effectively criticise the U.S. We can take it; we need it actually! Also, ethnic slurs against "Red Necks" and "Stupid Land" and how dumb ALL Americans are is not too smart as far as amateur radio public relations goes, but Canadians are not too smart, are they? Hi! See what I mean? That stung didn't it?. Such generalizations are taken quite seriously by many if not most. How about "All Canadians are stupid" or "All Pollak's are stupid." Ouch! See what I mean?

THIRD

Personal attacks (weight, mental problems, intelligence, etc.) against anyone is always a sign that you are losing your fight. Not a winning strategy, in my view.

FOURTH

Karol needs to define his goal or goals. These are quite unclear to me. Two good goals would be to move the Polish to 14.272 MHz. and not be harassed there plus to constructively criticise America; we welcome a Devil's advocate. I welcome it anyway. If Karol wants to "nix" the U.S., he will lose. We have the aircraft carriers, remember? Sam and John Adams and company set up a pretty powerful group down here in Amarica, and we are not done yet!

FIFTH

Karol should reign in his "potty mouth" on amateur radio. It makes him, his military college, Poland, and Canada look very bad. His childish references to "sucking" or otherwise "doing" Riley in the bath house are illegal here in the U.S. and that would be more than enough for Riley to issue a Notice of Forfeiture and win big, big, big against K1MAN if Glenn did likewise. Make no mistake, I say that Riley is a cheap and corrupt polition playing ND8V like a grand piano, and what he does in the "bath house" is not relevant, of course.

This is America. Anything goes. Market forces sort it all out. The current market forces dictate that potty mouth on amateur radio and national television is out. Even Janet Jackson's bare boob is out. The ancient Egyptians flaunted their boobs all the time. It is great to be a king, isn't it? Hi, of course.

ND8V and K3VR were dealt on air mortal blows om 16 and 17 December 2005. The pen is mightier than the sword!!!!!!!!!!!!!!! Both can recover if they are smart. I still have hopes for ND8V. I am afraid that K3VR and Riley are toast, however. They are going down.

FINALLY

Karol can do better and fix things by acting better in public. His intellect and wit are awesome. Clean it up, Karol, define your goals, and we can make one hell of a difference in both amateur radio and in the lives of all of our listeners. The latter (and the new talk show) has the very real possibility of becoming huge and blowing both the FCC (rather Riley and his FCC support), K3VR, ARRL (and ND8V) right out of the water. Carpe diem!

Trying to set me up for a weapons conflict with the government here at K1MAN might be aimed at illustrating your anti gun Canadian view, however, our Constitution prohibits advocating the overthrow of our government by force. Not very smart, Karol! Also, this plays right into the hands of Brian, the fraudulent Crow.

I have all the tools I need right in our Constitution to beat those punks, hands down. We Americans are not as stupid as you suggest. You are not as smart as you think. I am playing at Level I, Riley is at Level II, Brian is at Level III, and you are at a distant Level IV. If you really think I am "going down," as you say, then you are at Level V or posibly as low as Level XX.

I think you are all wound up with anti American sentiments and it is clouding your judgment. Come down and sit in my chair for a day and see just how smart you really are! You would go down, and hard, here on our U.S. playing field, and fast. Yes, you have "free" health care but no aircraft carriers. Your kids and adults are not in Iraq. Good for you. We will gladly let you switch roles with us, old pal from the North! We don't plan to let punks like Hitler and Stalin (or Saddam, or anyone else) gang rape our mothers!

Don't like America? Just wait and let us hang ourselves if you really think we are THAT stupid. When we run out of fossil fuel we will all freeze anyway. eh? Except those in "stupid land!"

73 and GL de K1MAN

hating the fact I will now sound like bill Clinton but that depends on
the maeing of the word "anomaly"

but K1man seems to be bit further out than most hams although I am not
certain any of this stuff published as if it were his is in fact his
many hams hate him so much they will say anything about him

but ham that nuts are common

we have K4YZ that states lying on the interent is child abuse and
pedophilia, and that anyone who disagress with him is a homosexual Dave
who says their is nothing wrong with Knowing help other to break thier
own laws if he can claim DXCC credit in the process. N2ey who seems to
recite the whole histoory of Ham radio QSO by QSO in answer to
question, and that is just here on RRAP
wether this mean K1Man is an anomoly in your eyes or not I realy can't
say but I'll report you decide

at least a quarter of hams seem to prsent some real ego problems

A USB port, when you install the driver for a USB->serial converter,
is a serial port. The software can't see any difference between the
driver for RS-232 hardware and the driver for USB hardware. Just make
sure that you use the latest driver, which you may have to download
from the manufacturer's site. (Software no longer talks to the
hardware - it talks to drivers.)

However:

The Radio Shack adapter works with the driver supplied
The adapter Wal-Mart sells works with the driver supplied (and is
probably the cheapest one)
The Belkin F5U409 works, but you need the F5U109 driver from their
site

5019. Anyone Bought from GIJoeselectronics.com??

Newsgroup: rec.radio.scanner
Date: 2005-12-21 22:35:13 UTC
From: Andy NG <ng@tvcables.co.uk>
Message-ID: <DMSdnQ2h08w_RTTeRVnyhQ@pipex.net>
Source record: 10731

Hi Folks,

Has anyone bought from GIJoeselectronics.com, we paid them nearly $600 for a BCD396T with 3-5 day international shipping and it has never arrived and they can't/won't supply a tracking number.

We have waited for 4.5 weeks and the only number supplied is some kind of useless customs number, USPS say they cannot have shipped it without getting a number?

It seems to be a total sham, they never answer the phone, always a message and although they answer emails (sometimes) they refuse to sort the matter out.

The only conclusion we can draw is that they have obtained the money by deception, has anyone else got any experience with them?

Thanks,
Andy.

I haven't, but the usual path to follow is to contact the Attorney
General's office in the state in which they're located.

According to their phone number, they're located in Kentucky, so you'd
want <http://ag.ky.gov/office/contact.htm>

I hope you get this resolved.

5021. newbie: security question about scanners

can a scanner be tracked?, or can a scanner be 'located' by some other more sophisticated device?
specifically, I was thinking of buying an AOR AR8200 and I wondered if anyone knows if this device (as well as being a good
recieving device) gives off any hidden or unmentioned signals that someone else could pick up. Does it or any other scanners
contain an RFID chip?
Thanks for any advice.

yes, it can!!

, though not too easily, every receiver no matter what type has oscillators which produce signals, these at close range can be detected, that's how tv detector vans work.

possible, but to be honest , very inprobable the men in black suits would ever do so.

mike

I add:

I agree that the PRO-96 is a fabulous scanner. You need to purchase Don Starr's product "Win96" to really make it a powerful scanning device. Win96 allows you to open up military aircraft frequencies as well as to directly program the PRO-96 directly from the RadioReference database.

You should note that here in the Detroit, MI area, we are having problems decoding the Detroit Police Department's new digital system. This problem is not specific to the PRO-96, the Uniden 396 also exhibits the same problem. Both companies are examining the problem and don't yet have an answer for us as to whether the problem will be fixable.

Patrick AFB Area Log - Wed., 21 Dec 2005
==========

AIR TRANSPORT 400: DC-8 (USAF Contractor, Little Rock)
10:00am: Lands Patrick AFB.
11:40am: Departs to McGuire AFB.
[133.75, 132.65, 124.8]

GAMBLER 01: T-34C
10:30am: Touch-and-go at Patrick AFB, then continues northward.
[269.375, 281.425, 307.0]
Picture: PC210424
This acft landed at Avon Park Bombing Range yesterday, and had comms
with JSTARS back-end "Alleycat."

N967BW: CASA 212, Aviation Worldwide Svcs, Melbourne FL.
10:35am: Departs KMLB; immediately returns with ILS problem.
[118.2, 132.65]
NOTE: Aviation Worldwide Svcs is owned by Blackwater Aviation, a
"security" company with DoD contracts, whose acft see action in
Afghanistan and other hot spots.

SNAKE 01: F-15, FL-ANG 125FW, Jacksonville IAP
10:40am: In offshore Whiskey area.
[267.5, 341.1, 284.5, 351.8, 273.6]

KING 70: HC-130P #65-0970, Patrick AFB 920RQW 39RQS
10:47am: Ground comms.
[335.8]

TOPCAT 31, 32: S-3B, Jacksonville NAS VS-31 "Topcats"
10:55am: At Pinecastle Range.
[380.8, 357.0]

NASA 924: T-38N #67-14825, Johnson Space Ctr, Houston TX
11:15am: Departs NASA-KSC Shuttle Landing Facility.
[128.55, 125.175]

OAKY SAM: NORAD, Tyndall AFB
11:53: Informs STARGATE that DRAGNET VICTOR has been delayed by wx.
[364.2]

CARVER 21: F-15E, Flight of 4, Seymour Johnson AFB.
12:25pm: Orientation passes at Avon Park Bombing Range; "dry all day,
but combat laser capable." RTB Seymour Johnson. Self-IDs, callsign
spelled.
[307.25, 293.225, 292.2, 349.0; 269.3, 319.0, 346.25, 300.125 air-air]

INTERN 11: F-15E, Flight of 2, Seymour Johnson AFB.
12:40pm: Orientation at Avon Park Bombing Range RTB Seymour Johnson.
[307.25, 293.225, 292.2, 349.0; 269.3, 319.0, 346.25, 300.125 air-air]

DOS 564: UH-1, US State Dept INM/Air Wing, Patrick AFB
12:24pm: Local operations.
3:40pm: Lands.
[133.75]

DOS 236: UH-1, US State Dept INM/Air Wing, Patrick AFB
12:27pm: Local operations.
[133.75]

VICTORY 11: F-14, Oceana VF-103.
1:00pm: Northbound.
[285.5]

DOS 560: UH-1, US State Dept INM/Air Wing, Patrick AFB
1:10pm: Departs Patrick AFB.
[133.75]

BOLT 31: KC-135R, MacDill AFB 6AMW
1:16pm: Inbound MacDill AFB.
[311.0]

BANDSAW: E-3 AWACS, Mission Crew, Tinker AFB 964ACW
1:49pm: To Bulldog MOA to control Shaw F-16s vs FL-ANG SNAKEs, FANGs.
"120.95 not working."
[323.0 (Atlanta Ctr), 284.5 (Sealord North), 234.8, 288.2, 343.75]
Tremendous signal received at my qth from BANDSAW, considering his
location.

SENTRY 40: E-3 AWACS, Flight Crew. Tinker AFB 964ACW
1:53pm: Comms with Sealord: "Will delay 4 hours."
[133.95, 267.5]

JOLLY 11, 12: HH-60G Pave Hawk Helo, Patrick AFB 920RQW 301RQS
2:22pm: Inbound to Patrick AFB.
[269.375 (Twr), 255.5 (Ops)]

MADCAT 91: F-16CJ Shaw AFB 20FW 79FS
3:19pm: Comms with BANDSAW.
[343.75]

SNAKE 01: F-15, FL-ANG 125FW Jacksonville IAP
3:28pm: Comms with BANDSAW.
[234.8]

N722AS: Cessna 337H Skymaster, Air Scan Titusville FL
4:25pm: Departs Space Coast RAP.
[118.9, 132.65]
Since 2002, the FAA has listed this acft as "Sale Reported," but it
works with the other "Bat" security planes over KSC.

COAST GUARD PORT CANAVERAL
4:43pm: Comms with vessel "Key Largo" (17 feet) in distress; issues
call for other vessels to assist.
[157.1]

KING 76: HC-130P #65-0976, Patrick AFB 920RQW 39RQS
5:42pm: Departs to location on KODF 247 radial, near Moody AFB.
10:15pm: Lands at Patrick AFB.
[133.75, 132.65]

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring

Dear B. M. Sying:
What have you heard about the use of the PRO-96 or Uniden 396 on the
out-state (Michigan) digital system, which should be the same system as the
Detroit system? What are the symptoms of the problems in Detroit?

Thanks, Mac

He should have a big L tattooed on his forehead. I have a friend that
tattoos. Sack him up throw him in the trunk and bring him to my house.

If you ask that to a few of the Amateurs lurking about in the Newsgroups
then the answer from them would be an emphatic yes it does matter, followed
by the same old "lowering of standards" and "m3/brain dead cb'ers" "Lazy
Asses" etc etc.

That's not from me btw, I take people as I find them, I was simply curious.

Regards,
Graham

Looking for the cable "pin-out" or setup for pc interface
to this scanner. Anyone have information aside from just
buying the cable.

Also, looked over various sites and found some very old
dos software for programming. I'm looking at controlling
this thing with linux. Anyone have anything on that?

I'll write it if I can connect to it and understand the
command set (if any) certainly it must have some command set
to dump out the settings and/or to issue settings (freq change etc).
The manuals however dont mention anything like that.

TIA
dogdog

Ok I wrote about the command set a little too fast. I found
some stuff from jav232 (documentation) that seems to list
the commands for the DJ-x10, but still if anyone has more
information that would be great. Also an explanation of the
cable needed.

TIA again
dogdog

Could be, but it's a misdemeanor. And after the judge reads all his homo posts, I'm sure we will get off with a slap on the wrist. Then in the judges chamber he will probably pat us on the back for a job well done.

I did get a BCD396T more-or-less working on the Genesee County digital system. Many stations have chopped audio. Not favorably impressed. Supposedly, the Genesee County Simulcast system has two control channels. Should the radio be set to use both? The radio seems to respond when listening to only 868.8875 (with some stations having chopped audio) as a data channel. The manual is not clear.

Regards, Mac

I once bought an issue of this magazine and found it almost laughable--
extremely poor editing, numerous typos, poor grammar and just plain
uninteresting subject material. One issue is all it took me to realize that
what they're proffering ain't worth the money spent.

Greetings! This has probably been asked many times before so please forgive me for asking again, but how well does an outdoor TV antenna work for scanning? I figure it would tend to be somewhat directional which is not all bad if you are trying to hear a certain direction, but how much back end rejection would one expect?
My main scanner is a Radio Shack 2037, no trunking abliities. It goes through 956mgz I believe.
I had also thought about using a splitter to go to the main TV, and then also to my small TV and to the scanner via another switch. Would that degrade the input signal to much to make it of real value? I also have other antennas for use with the scanner so I would have other choices for antennas.
Just curious. Merry Christmas to all! Jon in South Carolina.

5048. Pittsburgh, Pennsylvania Scanner Resource

If Santa brought you a new scanner this year then your probably
looking for the information you need to program in your local
agencies.

Head to:

http://www.wpascanner.com

For information on the greater Pittsburgh area and surroudning areas
in West Virginia and Ohio.

Got questions? Get answers from other fellow monitors in the area at
the WPASCANNER Mailing List

http://groups.yahoo.com/group/wpascanner/

Ask a question about your new scanner, get input on accessories, get
information on new frequencies and other resources.

Want to know about the action as it happens?

Then sign up for the FREE Western Pennsylvania Incident Notification
service for your SMS or alpha pager.

http://upoc.com/group.jsp?group=wpaincidents

This is a FREE SERVICE (carrier charges still apply if applicable to
your carrier, service and/or plan).

Radio Shack

The following scanners are on clearance @ $99.97:

PRO-2052 (Uniden, great for MilAir)

PRO-2054 (GRE, low-end, discontinued upon introduction???)

PRO-95 (GRE, well known hand-held)

Of course we're all aware these will be affected by re-banding. However, at that price, you may want to pick one up for VHF/UHF stuff!

Some have reported good results with the TV antennas. Only problem with it
is that you have to turn the elements vertical. There is about a 20 db
signal loss if you don't.

The scanner directional antennas are basically, a TV antenna rotated 90 degrees. You can just turn the TV antenna on its side, and drill mounting holes. This is what the Grove Omni-Beam antenna is. You can cut off the UHF TV "wings" and it will work as a directional. Just aim the "fingers" in the direction of the signal to receive. Sorry of this is not technical enough.

Source record: 10763

Antennas are my field. What Mr. Klein says about the useful frequency range of a discone antenna is right. A reasonably well designed discone antenna will have about a 3:1 frequency range because the pattern degrades as the frequency increases. It is also true that the SWR of a discone usually remains under 2:1 for a significantly wider than 3:1 frequency ratio. Of course, SWR is no measure at all of an antenna's performance.

Another example of an antenna with a far larger SWR bandwidth (to coin a phrase) than pattern bandwidth is the terminated rhombic antenna. A well designed rhombic has 2:1 or perhaps 2.5:1 pattern bandwidth and a huge SWR bandwidth.

When doing propagation measurements in West Va. over 40 years ago, I came across a small rhombic in a front yard being used to receive TV signals. The man of the house had been in the Signal Corps.

One last note: almost anything will "work" as an antenna. The issue should be how well does the antenna work, never whether it works.

Regards, Mac

.... slowly finding some of the "secret instructions" of my brand new BCD396T.

Lisha,

If you want to tap into local police and fire bands, you'll need to get a radio scanner which supports trunking. The easy way to get started is to run down to Radio Shack and buy one -- they range between $80 and $250 for handheld and base units.

There are a few things you should know first, however. There are typically several police frequencies allocated for each district. You should start by trying to find these out. Radio Shack sells a guide which covers tri-state areas and is an excellent source. There are also some good database references on the internet. Anyway, once you find out these frequencies, you'll want to make sure you get a scanner which can listen in on these.

Usually around the 866 MHz range or 155 MHz range, most scanners will pick these up. You'll be able to tune in the scanners for a specific channel. However, most scanners are not usually used in this fashion (listening to only one frequency at a time). This is okay for listening to one-way weather advisories and such. However, most of the time you will scan through many frequencies and listen in on active ones. When it becomes inactive (conversation silence), you can stay put or keep scanning. However, you should know most most public organizations will not simply broadcast a single conversation back and forth on a single frequency; instead they use a different scheme.

With about a dozen frequencies allocated to them, a police station will often implement what's called trunking. Special units are placed in the trunks of police cars so that when an officer wants to make a call, the unit finds an open frequency in the set and broadcasts on this. In the transmission it also includes a special group ID code which uniquely identifies the broadcast group. The problem with only using one frequency is if many cops are sharing the same single frequency, it's quite common to have to wait in order to broadcast. With trunking, they can seamlessly broadcast without worry and without waiting for the line to clear.

Therefore, to a person listening on one frequency, they will only hear sporadic conversations. This is because it's possible for a "conversation" to initiate on Freq A, be replied to on Freq B, be sent the third time on Freq C, et cetera.

To tune in to a single conversation, it's important to get a trunking compatible scanner. When you program in a group of frequencies for a fire or police department into a trunking set, you can scan through the whole set. This will allow you to listen to all the conversations on

this trunking set. When you find a particular conversation you want to hone in on, you can HOLD DOWN a trunking button (at least that's how you do it on the Radio Shack Dual Trunking model) and it will detect the group ID being used and subsequently filter all conversations down to only this group ID. Then you'll be able to hear a cop radio to dispatch and vice versa, following an entire conversation thread end to end.

One more thing, for trunking to work, each trunking set needs a dedicated control frequency to send control messages. You can find out which is the control by listening to the loud modem-like noises or reference a comprehensive guide.

Also, there are two main types of trunking protocols, Motorola and EDACS, as far as I know. Make sure your unit can support what your local area uses. Happy scanning!

- D

5054. BCD396T questions 12/26/2005

Newsgroup: rec.radio.scanner
Date: 2005-12-26 14:33:23 UTC
From: "J. Mc Laughlin" <jcm@power-net.net>
Message-ID: <11qvvna1bjggo20@corp.supernews.com>
Source record: 10766

My BCD396T contains firmware version 1.07.01. The radio is expected to be used only to monitor the Michigan APCO-25 system.

I was not able to find the answers to the following in the BCD396T's manual:

1. With the radio off and the charger plugged in, page 34 indicates that when the batteries are fully charged one will see the message: "Charge Complete." After many hours of such charging, I still see the charging message: " Normal Charging."
Is the manual correct and eventually I will see a Charge Complete message?

2. Uniden's site provides a vague sentence description of the enhancement between 1.08 and 1.09 versions of the radio's firmware.
What is/are the improvements between 1.07 and 1.08? Have improvements been noted with the use of 1.08 or 1.09?

Thank you. Regards, Mac

Message-ID: <11r036ij9c4s0fa@corp.supernews.com>
Source record: 10767

Question 1 has been answered. After a very long time, "Charge Complete"
appeared.

Another couple of questions:
3. On the right hand side of the second line down from the top is an
arrow pointing up. I have not found the significance of the arrow in the
manual. What does the arrow signify?

4. The ID Numbers displayed by the radio have equaled the specific users
shown by Radio Reference's site. However, the radio has some ID numbers
replaced with a name that is displayed in place of an ID number. Uniden
placed these substitute names into the radio.
How does one discover the actual ID number when a substitute name
appears?

Thanks, Mac

Message-ID: <pan.2005.12.26.21.28.55.445123@localhost.localdomain>
Source record: 10773

Is the mod file for 6400 channels as posted on http://www.mods.dk correct?
Specifically how can pin 4 of the new IC match pin 1? Looks like
this Should be pin 3 (not 4) to match pin 1. What gives?

5062. Pro-2006 mods - 6400 channel mod

Newsgroup: rec.radio.scanner
Date: 2005-12-26 21:42:17 UTC
From: steve bowyer <steveb@localhost.localdomain>
Message-ID: <pan.2005.12.26.21.42.14.975771@localhost.localdomain>
Source record: 10774

The 6400 channel mod as described in http://www.mods.dk says to cut the trace between ic 505 pins 28 and 26, then install a jumper from ic501 pin 67 to ic505 pin 28. However my pro-2006 schematic shows the pad at 28 already connected to ic501 pin 67 via the pad at 26. My question is why not just eliminate the jumper, slice the pin 26 lead from its pad and run to the 5 volt pull up directly to 26.

I'd like to hear from anyone who did this mod about how they handled this. Maybe the mod works exactly as stated?

Thanks, Steve B.

Dear Mr. Crocker:
Thank you for your message.
I went to the Radio Reference site and spent a long time looking for
useful information about a BCD396T. Alas, I was not able to find anything
at all.

I will appreciate a URL that goes to the page on the Radio Reference
site that provides useful information on the BCD396T. I was not able to
find such a page.

Regards, Mac

Been looking over acarsd on linux but it doesnt look like it
will take a wav file in for decoding. Anyone know if acarsd
running on linux will process recorded wav files, or .raw files?

Also, where would one find the signal information about acars?
I'd like to see how decoders are written and figured this would
be a good starting point, especially since acarsd is allowing
a library.

After about 14 hours, you will get a "charge complete" message. It is
a timer based system, not a current based charger.

>> > 937.6500 937.6625 937.6750 937.6875

First off, I have never programmed a PRO-95 in the 900 MHz range, but it should go like this:

First pick a scanner bank that's empty or at least doesn't have anything important. Load the above freqs as if they were conventional channels. In my case, Bank 9 is free so I'd store them in channel 900, 901, etc. Now scan those channels and listen for the one that emits a continuous data stream (buzz or roar). That's the control channel. When the PRO-95 stops there, press MODE until the mode indicator in the upper right part of the screen says MO. (Available choices are FM, MO, ED, AM.) If the PRO-95 is reading the data ok, you'll see MOT: CNTRL appear at the bottom of the screen. (If people are talking, you'll also see their talkgroup numbers on the screen.) Lock out the other channels you entered.

Press PGM then TRUNK. Then press MODE until MOT appears in the bottom line of the screen. (Available choices are "not trunked", MOT, and ED.) You'll see some other stuff on the screen; ignore it. MOT is the important setting.

Finally press SCAN and you should be in business.

You could delete the other channels instead of locking them out, but I wouldn't, since some systems rotate the control channel among the assigned freqs. If you turn on the scanner some day and find the control channel dead, it's probably been moved to one of those other freqs.

Note that there's a difference between setting a *channel* to trunked mode (described in my second paragraph) and setting a *bank* to trunked mode (third paragraph). These are two independent things.

You can set a channel to trunked mode even if it's stored in a bank that's not set for trunking. Why would you do that? Well, suppose you have a freq that sounds like a trunked system control channel. For a quick check, just store it in any free channel. Try setting the

channel to MO or ED mode as you watch the display. That'll immediately reveal if it's carrying Motorola or EDACS trunking data. For this, the bank's trunking setting doesn't matter.

It also doesn't matter if a channel is set to a non-trunked (FM or AM) mode. Such a channel is scanned like a conventional channel, regardless of the bank trunking setting. In theory a bunch of conventional channels can share a bank with a trunked system. In practice I have found that doesn't work so hot. There's no quick way to focus the scanner on the trunked system if an incident is breaking there. I have to keep punching the lockout button to silence the conventional channels sharing the bank. Then later I must remember to unlock them. The whole business is such a hassle that I don't share banks, though it means several hundred channels aren't available for conventional use.

A Motorola control freq doesn't have to be stored in the first channel of a bank. There can even be more than one active control channel in a bank. (You might set the scanner up that way if a trunked system has more than one repeater site within receiving range.) HOWEVER, the PRO-95 will lock onto only one control channel and ignore any others in that bank.

With EDACS, I think the last 2 digits of the channel number in the PRO-95 must match the LCN (the EDACS channel number). For example, the freq for LCN 3 could be stored in scanner channel 103 or 203 etc., but not in 153.

Greetings to All!
Thanks for the input! Reloader, I don't understand the advantage of removing the UHF elements. It would seem to me that it would be an advantage to leave them on for UHF reception. Help me with this if you can. Thanks a bunch for what you have given and in advance for any other help you can offer! Have a great new year! Jon in South Carolina.

Greetings Ralph!
I can see from what you have said that it would not then be practical to use it for both TV and scanner. I would bet my 13 element 2 meter beam would do a dandy job for directional use. What do you use for scanner antennas? Thanks for your input and thanks in advance for any additional help you may offer! Jon in South Carolina.

You guys are so lucky! I just moved to Canada, and the prices here are crazy! Trunking scanners start at over $350CAD.

Radio Shack won't ship to Canada...and I am 6 hours from the US border, so a drive is out of the question. But I'll figure out a way of getting hold of one!

Any advice out there???
Rob

Hi dogdog,

Maybe you should ask this question in acarsd@yahoogroups.com. You`ll find
the author there ...

Talk to you later ... Hans from Germany

Don't know your circumstances, but, a six hour drive seems like nothing. I regularly drive 12 hours just to see a friend. (And one of my scanners is on the dash listening to various agencies. Saved me a few tickets. I drive with a lead foot <g>. But not always.)

Have any friends that could buy a state side scanner?

Hello all.

I've just moved from the UK to Canada, and could use some advice!

1st...how can I get hold of a trunking scanner for a good price (like radio-shack prices, since there is no radio shack in Canada anymore!)?

2nd...What is the new trunking system that is coming in 2006? Will that affect the trunking system in Canada as well? I believe they use the GE Ericsson system in Edmonton.

3rd...any good frequency resources for the Edmonton area?

Thanks in advance for the help. Much appreciated!
Rob

I got a Pro-94 for Christmas and have never heard anything but static from
the trunked channels.

I used the cable and ScanCat-Lite-Plus to upload the information (whether
you call it difficult or tedious, manual programming is not my cup of tea)
and the non-trunked channels work just fine.

The trunked channels seem to scan but I don't understand the display and the
manual doesn't explain it.

Any advice will be appreciated.

TIA...Bob

Dear Mr. Crocker:
I do have an account.
I did not realize that when you said that the Radio Reference site "has a lot of resources for the owners of the BCD396T" you meant one should post questions.

Eventually, I will figure things out or encounter someone who has experience. So far, the quality of reception is highly variable. I was in the center of the county today where one might assume that signals are strong and it made no significant difference. The users of the system must not be pleased.

Regards, Mac

What about the NEW Canadian Radio Shack stores? Are they offering the same deals as the U.S. ones?

On the same topic does anyone know how many of the NEW Canadian Radio Shack stores are open already, and how many may be planned in the near future?

Dave
Who only has "The Source" (also known as OLD Canadian Radio Shack) stores nearby.

Depends where you are - you might try to locate a NEW Canadian Radio Shack Store.

But you can purchase trunking scanners at various Canadian stores; Radioworld, Durham, Elkel etc. all ship nationwide. Some of them also sell digital scanners, subject to some restrictions.

Dave

I have an old BC60XLT that I have had for years and now have a new pro
97. I would like to get something that will receive the digital mods
also. Not lots of Chanel's just something to
hear the Ind state police.Everything els I want to hear I can get on my
other radios,but not ISP as they are digital. Prefer something used but
I don't know what products are available.
I'm not even sure what new radios get the digital. So asking for
suggestions.thanks bill

You can find them on Ebay, but unless the price is just "too" good I would
not try it. If you want to hear Digital buy a new scanner with a warranty
from either RS or Uniden.

I've had a look at some of those guys, but their prices are much higher
than stores in the US. I have managed to find some of what I'm looking
for on eBay though.

So anyone here got some good frequencies for me as I await the arrival
of my new radio?

Thanks,
Rob

Having just purchased a 396 two days ago I was a little surprised at how unfriendly the Uniden manual is to use. As a long term scanner user despite not having played with any of the newer trunk capable scanners, I didn't expect to find it all that hard to pick it up and be able to know how to use it without to much of a problem.
Well talk about a shock to the system whenI turned it on - only slowly finding out how to use it properly after a couple of days of on and off playing with it.
I remember that there is supposed to be an easier to understand manual on the net somewhere (not uniden written) - can anyone help me out with where I can find it as well as some hints for the brain dead (like myself at the moment) to get the best out of the radio?

Matt

Dear "Matt"
I am in a similar situation trying to get a new BCD396T up to speed.
Have no idea where you are located nor what you are wishing the receiver to
do.
My goal is to get the radio to work with the Michigan APCO 25 system on
800 MHz, and that is all that I have worked on.

So far, I have not found much on the WEB that is of actual use. As was
pointed out to me here, a set of forums exists off of the radioreference.com
site. Some information of interest to me is available there.

Let us know if you find something of value. It might also help to
describe your goals for the radio and generally where you are located. Such
information might prompt someone to help with your goals.

Regards, Mac

Help!

I have recently got my hands on a RS Pro 2006 scanner. I can program frequencies in 1-at-a-time, but it takes forever.

I have tried to search for "active frequencies" using the directions in the manual, but it won't seem to search the Limit assigned bands.

My question is, do I have to program EACH frequencie in, or can I somehow do a "band search" like my old Sportcat?

Please help?

Hi Mac - well locality wise I am a fair way away from you - Australia, so will be reasonably difficult for either of us to monitor the same signals with the 396. We have only just had the 396T (an Australian version) released here about a week ago (although there are probably a number of others who have imported US versions prior to the release of our version), so there hasn't been (to my knowledge) too much work done on the construction of profiles or similar (anyone in Aust - preferably the Melboure or Darwin area - playing with the 396, please drop me a line). What I mainly wanted the 396 was to listen to some of the police comms - unfortunately Melbourne (AS) is encrypted digital, so no go there, but I still travel enough that I may be able to use it for this purpose. Additionally I also want it for the trunking capability - haven't played with this field previously, so quite concious of being a particularly raw newbie there. Anyway, time to get back to the manual and try and make some sense out of it.

Matt

Thank you! I think I have it now. I am used to just selecting the "band" I want and pressing search.

Once the limits are programmed in, turn the sq. dn and an arrow (up or dn) and it scans the limits programmed.

It took a while to figure that one out!

It does not seem like there are many wideband scanners with "Trunk Tracking" capability out there. Does anyone know if there is a real reason why? Are there performance problems with these? Does anyone have experience with the Uniden BR330T?

A scanner like this sounds appealing to me since it theoretically adds long-wave, short-wave and trunk-tracking to what my basic scanner today offers. Anyone know if Uniden plans to offer an upgrade to the BR330T in the near future that can also handle digital?

Regards,
Erik

The bands are not pre-programmed, but set a small gap between the high and low limits. eg 156.000 lower and 164.000 higher will give you a marine search. The 2006 will select the most appropriate channel spacing for you but you can change it.

Check out the Uniden BCD396T http://tinyurl.com/bj4na I have a
friend that has one and loves it. I have the Br330-T and am really
happy with it considering there is no digital in my area at this time.

Ken, try to check out your local Radio Shack store if there is one in your area. They are normally pretty good about having a copy of State Police frequencies. If not, locate a Police Call book and look under NMSP or State Police ....or maybe even locate a ham radio operater in your area.....those guys have it all!!! What area are you interested in? I may have a few that will work for you. I am in the Texas Panhandle and travel to New Mexico and listen in a bit.
Frank

Try this link. It has a few NMSP freqs on it.
http://www.zianet.com/kc5kto/scanner/lincolncountyNM.html also:
http://los_alamos.home.att.net/state.html good one!!
http://www.rampart-sar.com/newmex.htm
Hope these help

K1MAN is a GOD of the tw-way. He will win and be declared the leader of
all free radio in the world. No power on earth can stop K1MAN.

The Source By Circuit City (used to be Radio Shack) carries the Uniden
Trunk Tracker 3. It is available by special order online.

Experts,

I have a used RS Pro 2006. I have figured out how to scan with it and all that (thank you!) but...

I can pick up signals from very close by, including my own cordless phone. However, I scanned all list night and didn't get ANYTHING in the 800-900mhz. Tried again this morning and still nothing.

Is there something I am missing? (Its modded btw). Shouldn't I just be able to program the limits and get stuff?

Is this set bad?

Thank you!

-N6

"one man can make a difference: with a well placed fact".
I would have used the word "bullet" for "fact", but that was not appropriate
in this venue.
